Now, it happens that most of the American teachers in Tokio in 1873 were graduates of West Point, Annapolis, or schools and colleges in the United States, while those of British origin were from the counter, the shambles, or the forecastle. The worthy butcher against whom Japanese pride revolted, was an English gentleman who, at last accounts, still plied his honorable trade at Kobe. Why a butcher was any the less fit instructor for Japanese youth than a tinsmith or common sailor was the wonder of the writer of the articles on "Education in Japan" published in the *Japan Mail* of 1873. The "scathing comments," while not consciously directed against any one nationality, necessarily concerned most that which was numerically in the majority—the British. Two separate translations of these articles into Japanese were carefully pondered by the officers in the Department of Education, and henceforth the instructors in the higher Government schools were appointed from duly accredited graduates of the universities of Europe and America.

THE AUTHOR OF "EDUCATION IN JAPAN."

ITHACA, N. Y., May 26, 1894.

THE NATIONAL PARK IN THE STATE OF WASHINGTON.

TO THE EDITOR OF THE NATION:

SIR: Permit me, as one of the residents of the State of Washington, to thank you for the valuable support you are giving to the bill for the establishment of a National Park in this State, and to quote a portion of a report made by Mr. E. O. Schwagerl, superintendent of the Seattle Parks, to the Board of Park Commissioners concerning the beauty of the region included in this proposed National Park, and the danger of delay in the consummation of the project. Mr. Schwagerl says:

"The natural beauty of this reservation is indeed wonderful. Its numerous streams, cascades, torrents, and waterfalls, amid solid walls of rugged rocks and verdure, have no equal anywhere. The symmetrical and charming beauty of the characteristic trees, crowning and dressing the tops of ridges, hills and mounds with their varied undergrowths, constitute unequalled natural groves, clusters, and groups. Those trees, by reason of their altitude, have made very slow and very short annual growths, and thus have become extremely dense and compact in their foliage and twigs. Their resinous nature, as also the miniature moss forming upon them, makes them extremely inflammable. This fact induced some visitors, as reported by settlers and guides, to set fire to them, merely to enjoy a momentary rocket conflagration, and thus many an invaluable forest gem has been killed and the beautiful park scenery of Paradise Valley irreparably marred and injured, while others have ruthlessly cut down live trees for their camp-fire wood. In a short time, if such vandalism is not peremptorily stopped, one of the (if not the) most beautiful natural parks in the United States will have been ruined beyond reparation. It is also true that this natural park possesses but little game—a few mountain goats, very few of the rare white grouse, the 'whistling pigs,' and some few timid bears. These inoffensive animals are being hunted down and will soon be exterminated, but should by all means be encouraged to live, increase, and remain the live feature of so wonderfully beauti-

ful and interesting a National Park. It is earnestly recommended that your honorable body make known this lamentable and dangerous condition of things in this valuable and important National Park reservation to the honorable Secretary of the Interior, for him to recommend such measures or steps as in the premises seem to him needful."

The foregoing quotation shows the urgent need of the passage of the bill.

Yours truly, GEORGE H. PRESTON.

SEATTLE, WASHINGTON, May 15, 1894.

Notes.

D. APPLETON & Co. are on the point of issuing by subscription 'The United States of America,' in the light of this country's natural resources, industries, and commerce, and educational, literary, and artistic performance; Prof. Shaler being the editor.

D. Van Nostrand Co. have nearly ready 'Modern Methods of Sewage Disposal for Towns, Public Institutions and Isolated Houses,' by Col. Geo. E. Waring, jr., and 'New Roads and Road Laws in the United States,' by Roy Stone.

'The Church and the Kingdom,' two addresses by the Rev. Washington Gladden, will be published next month by the Fleming H. Revell Co.

Macmillan & Co. announce 'Children's Singing-Games,' edited by Alice B. Gomme and pictured in black and white by Winifred Smith.

Roberts Bros. will shortly publish 'The Dancing Faun,' by Florence Farr; 'Keynotes,' stories by George Egerton; and 'The Wedding Garment,' a tale of the life to come, by Louis Pendleton.

Lee & Shepard have in preparation a work on the esculent and poisonous qualities of mushrooms, by Capt. Julius A. Palmer, and 'The Boys' Own Guide to Fishing, Tackle-Making, and Fish-Breeding,' by John Harrington Keene.

Mr. F. S. Ellis has found time to turn Caxton's prose 'Reynard the Fox' into lively doggerel couplets (London: D. Nutt). He has not followed his original painfully, but has allowed himself considerable amplification of phrase, and has dexterously softened some incidents more acceptable to Caxton's plain-spoken times than to our own day. The book is beautifully printed, and has a clever frontispiece and title-page by Walter Crane, who has also supplied attractive head-pieces for the chapters. Mr. Ellis's brief Glossary "in vulpine verse" is amusing. We have no doubt the excellent old story will win many new friends in its latest dress.

'Selected Letters of Mendelssohn' is a new version, by W. F. Alexander, of thirty-three of the best letters of that composer (Macmillan). There is a short preface by Sir George Grove, who thinks that in the happy knack of expression "even Dean Stanley, the prince of letter-writers, hardly excels" Mendelssohn. Even if the reader should fail to agree with this flattering estimate, he will find in this brief collection some graphic descriptions of travel in Italy and Switzerland, and glimpses of musical life in Germany. In Mendelssohn's day, travel in Italy was still by stage coach. In going from Rome to Naples, he writes: "One flies over the level plains; for a little drink-money the postilions will go at a furious gallop, which is quite what is wanted on the marshes; and if one wants to see the country, it is only necessary to refuse the drink-money, and the pace falls off at once." From a musical point of view, the most interesting of these letters is the one beginning on page 124. In it Mendelssohn declares that he is unlike other people, inasmuch as to him music is more definite in its meaning than words are. "If you ask me what was in my mind while composing a particular song, I answer, The song itself precisely as it stands." In Rome, one day, he was so incensed at hearing great composers and painters spoken of disrespectfully that he wrote: "If all my life I never contrive to do anything else, I am resolved at least to be as rude as I can to people who have no respect for the great masters." It would have been well if Mendelssohn himself had had a little more respect for the great masters who were his contemporaries—Schumann, Chopin, Berlioz, Wagner, and Liszt. However, he never disparages them in his letters; or were such passages eliminated?

'The Legitimate School of Singing,' by Francis C. Maria de Rialp (New York: The Author), is not intended to be a new method of teaching the voice, but merely a collection of hints to singers and teachers. It may be doubted whether any teacher or student can get any satisfaction from such a definition as this of pitch: "The height and circumference, chosen for their acoustical value, at which every sound that we utter must, in its artistic capacity, originate, and within which it must be contained." But there are many good things in the little book, on chromatic sounds, trills, legato, and especially about phrasing, as to which the writer strenuously insists on what most singers and teachers overlook, namely, that it is the poem and its punctuation that should regulate the breathing, accentuation, and phrasing in general. There is also much food for thought in this sentence: "Unhappily, it is the less well-informed class that represents the larger part of our audiences, gives the verdict, and makes reputations, to the detriment of the good taste and classical principles by which singers should be guided."

Few, we think, would contend that the phase of American character whose latest designation is Coxeyism was not worth even a catch-penny volume. Such is 'The Story of the Commonweal,' by Henry Vincent, "official historian" (Chicago: W. B. Conkey). The "Citizen-Commonweal" is a non-entity like the socialist "State," but this manifestation of the loafing spirit in the American people was a shameful reality, and may well be spread upon the minutes for the future philosophic historian. The "eloquence in the patient dreariness of their plodding towards a goal" has deserted the "industrial armies" since Mr. Stanley Waterloo wrote the introduction to this account of the several west easterly raids; but the camera speaks for them here in portraits of Coxey and Browne, of "Gen." Kelly, of L. L. Polk, "late president Farmers' Alliance and Industrial Union," of Mrs. Nile C. Smith, and in numerous views of the rank and file afoot and afloat.

The spice of the new volume of Proceedings of the Massachusetts Historical Society (vol. viii., 1892-1894) is to be found in the tilt between Messrs. Robert C. Winthrop, jr., and Charles Francis Adams, growing out of the latter's 'Massachusetts and its Historians.' This controversy is very well worth reading, both for the incidental information and for the exhibition of the historic temperament in either disputant. Mr. Winthrop has occasion to rehabilitate Emmanuel Downing's reputation so far as it has been affected by Mr. Lowell's judgment. Mr. Adams's essay on the curse of the Spanish discovery of America is also contained in this volume, along with translations of letters from Gen. Pero Menendez de Aviles to the King of Spain, bequeathed to the Society by the late Francis Parkman, whose brief and modest autobiography in the third person is here printed, and supplemented by Mr. O. B. Frothingham's elaborate sketch of the historian.

In the *Nation* of January 11 last, President Gilman noted the fact, published by the Hon. R. C. Winthrop, that on August 6, 1664 (O. S.), Prof. John Winthrop saw five satellites around the planet Jupiter. Mr. F. H. Clutz, a student in astronomy at the Johns Hopkins University, has published in the University Circular No. 111 an interesting inquiry into this observation. The question considered is whether there was any bright star around Jupiter on the evening in question that could have been mistaken for a satellite. Mr. Clutz computed the place of Jupiter from Leverrier's tables for the night of observation, and then, from a star catalogue, found that the star numbered 6,448 in the British Association Catalogue was only five minutes south of Jupiter, while two other yet brighter stars were a little more than half-a-degree away. As Winthrop had no means of distinguishing a satellite of Jupiter from a star, there can be no doubt that some of his supposed satellites were one or more of these stars.

Mr. Waters's "Genealogical Gleanings in England," in the April number of the *New England Historical and Genealogical Register*, deal largely with the Massachusetts family of Pynchon, of Essex origin, as is very convincingly displayed. Incidentally, Mr. Waters directs the attention of genealogists to the Stowe MSS. in the British Museum, as containing "one of the richest and most valuable heraldic and genealogical collections in the Museum," as yet unindexed. He further prints the will of Anthony Radcliffe, brother of Lady Ann Mowlson, the benefactor of Harvard whose family name has just been bestowed upon the Annex. In the same number of the *Register*, Judge A. W. Savary of Annapolis Royal, N. S., traces the pedigree of the inventor Edison to his grandfather Samuel, among the Loyalists of New York who settled in and near Digby, N. S., where Edison's father, Samuel, was born before the migration to Upper Canada and Michigan began, in 1811. The only representatives of the name at present in Digby are colored people, descendants of a negro brought by the well-to-do Edisons from New York.

The annual report of the curators of the Bodleian Library for the year 1893 shows an increase of upwards of fifty-seven thousand "printed and MS. items" received during the year. Nearly forty thousand of these came in under the copyright act. Of the remaining seventeen thousand-odd, 4,990 come from the United Kingdom, 666 from the United States, and 4,978 from Germany and Austria. France contributes 2,896. The Shelley donation, received from the poet's daughter-in-law, who offered it through one of the curators, the late Prof. Jowett, is rightly pronounced "one of the most important gifts received by the library for many years." It consists partly of volumes given under special conditions. These are not to be opened or copied until twenty-odd years hence, and consist of MS. letters of Shelley, his second wife, and others, together with two printed volumes, containing the journal-book of Shelley and other biographical documents. The remainder of the Shelley donation is permanently exhibited in the library, and consists of ten autograph MSS., three volumes of his

printed works, the Sophocles found in his hand after death, and two copies of portraits of the poet. Eighty-five MSS. have been acquired during the year, and also a collection of Icelandic *grafskriptir*, ranging from 1823 to 1892. These Bodley's Librarian describes as "funeral-broadsheets, generally containing brief particulars relating to the deceased, and suitable poetry." To this he adds: "The collection was sent from Iceland, with a consignment of ponies, to a Glasgow merchant, who offered it to the Bodleian."

The report upon Uganda by the late Sir Gerald Portal, recently presented to Parliament, will increase the general regret at the untimely decease of this able officer. It is a very clear statement, in a series of terse propositions, of the condition of the country, the difficulties of the problem presented to him, and the various methods of solving it. He asserts very emphatically that there can be no honorable withdrawal from the country; that, if this were to take place, the natives' trust in English promises and English credit would be completely broken. Not only so, but some other European Power, probably Germany, would immediately take possession of the "natural key to the whole of the Nile valley and to the richest parts of Central Africa, and the only country which offers any present hope of profitable commerce." The direct administration of Uganda by the Government is not advised, on account of the great expense, but a somewhat indefinite plan is proposed "by which the English sphere of influence may be maintained, with the help of Zanzibar." He advocates the construction of a railway to the coast and the putting two steam launches on Lake Victoria. The report contains some strictures upon the course pursued by the British East Africa Company, especially with regard to its bringing the Sudanese troops of Emin Pasha into the country, where they have committed great atrocities. These strictures the directors of the company have answered in a letter addressed to the Government.

Dr. J. W. Gregory has given, in the *Fortnightly Review*, a lively description of his recent expedition to Mt. Kenia, the region in which the new socialistic experiment of Freeland is to be tried. From it we gather that the advantages of the country for European colonization have been somewhat exaggerated. The soil is often rich, but the rains are very uncertain, and agricultural produce cannot pay with the present cost of transport, "even if there were a railway to the coast." Of mineral wealth there are very few indications, "as a rule not even enough to found a mining company on." Cattle-ranching might pay, except that occasionally the whole country is swept by disease, and the cattle and buffaloes are then practically exterminated. The natives, too, are bitterly hostile to the Europeans, rendered so by the treatment which they have received from the expeditions of Count Teleki and Dr. Peters. "You white men," said a chief, "have faces that smile like the sky, but you are bad inside." Dr. Gregory was unsuccessful in his unaided attempt to reach the summit of the mountain, but he climbed high enough to make some important observations of the geological structure of the mass, the extent of its glaciers, and the character of its fauna and flora.

Mr. W. Woodville Rockhill, the author of 'The Land of the Lamas,' made a second journey through Mongolia and Tibet in 1892, an account of which he has given in the May number of the *Geographical Journal*. His intention was to have crossed Tibet to India, but, on approaching Lhasa, which he nearly reached, he was stopped and compelled to return to China. During eleven months he had "travelled about 8,000 miles, surveyed 3,417, and, during the geographically important part of the journey, crossed sixty-nine passes, all of them rising over 14,500 feet above sea-level." Mr. Rockhill (an American, it should be remembered) is not only a careful observer and geographer, as the accompanying map shows, but he is, according to Sir Henry Howorth, "one of perhaps three men in the world who know both Chinese and Tibetan, and the only man who is known to have waded through the enormous masses of Buddhist literature of Tibet—an absolutely unknown land to all but himself." There is also an account of the celebration by the Royal Geographical Society of the fifth centenary of the birth of Prince Henry the Navigator, and a report of Baron Toll's interesting expedition last year to Arctic Siberia and the New Siberia Islands, which he reached by travelling in dog-sledges on the ice.

We note the arrest, on suspicion of anarchy, of one of "Les Jeunes," M. Felix Fénéon, a décadent and symbolist writer well known in the Quartier Latin. M. Fénéon is rather old for a "Jeune," since he was born in 1861, but he makes up in youthfulness what he lacks in youth. He founded in 1883 the first of the reviews of the Latin Quarter, the *Revue Indépendante*, a duodecimo monthly, which lived for only a year or two, though it has been revived since. The earlier series is interesting at the present time, and even to some extent valuable, since Fénéon, who wrote very little in it himself, had among his habitual contributors some men now of much repute. Stephane Mallarmé wrote for it, and Paul Verlaine, and Émile Hennequin, and Édouard Rod, and Moréas and Tailhade and J. K. Huysmans, with others of less note. Fénéon himself wrote art criticisms in praise and honor of the Impressionist school of painters. Since the death of the *Revue Indépendante*, literature has been with M. Fénéon rather an avocation than a regular pursuit. He entered the civil service of the Republic, and at the time of his arrest was a chief clerk at the War Office.

M. Francisque Sarcey, in a recent *feuilleton*, tells a rather amusing story. Blumenthal, the great theatre manager of Berlin, was talking with Tolstoi about Ibsen, and said: "I have put a good many of his plays on the stage, but I can't say that I quite understand them. Do you understand them?" To whom Tolstoi: "Ibsen doesn't understand them himself. He just writes them, and then sits down and waits. After a while his expounders and explainers come, and tell him what he meant." This is an excellent story to receive with reserves, since the truth of it would not be in the least degree lessened if it should be shown never to have occurred as a fact. In that event it would merely take its place among that class of writings which Semitic scholars call Haggadah, the aim of which is not so much historical exactness as the conveying of valuable moral and critical lessons.

Miss Laurence Alma-Tadema has been receiving a certain amount of printed praise for the freshness and cleverness of the title of h r new novel, 'The Wings of Icarus.' But nothing is new in this senescent world. Charles de Bernard wrote 'Les Ailes d'Icare' something like fifty years ago, and Thackeray spoke of it at some length in 'The Paris Sketch-book.' The volume is still in print.

Mr. Andrew W. Tuer, of the Leadenhall Press, London, who is engaged in writing a work on the horn-book, desires to get a full-size photograph and description of one in the shape of a cross lately sold by a Folkestone dealer, Signor Chanteri, to a Parisian trader.

Radcliffe College has been wise and fortunate in securing, as its first Dean, Miss Agnes Irwin of Philadelphia. This lady has long been at the head of a successful and widely known young ladies' school in that city. She comes of a remarkable family, being, on her mother's side, a favorite niece of Alexander Bache and a great-granddaughter of Franklin; and she is a worthy representative of such a line. Indeed, it is not too much to say that her access to this office is an event of first-rate importance to the interests of the higher education of women. Miss Irwin will bring to the serious problems of administration which such an institution as Radcliffe College presents, and also to the simpler duties of the place and her merely personal relations with the students and officers of instruction, a combination of admirable qualities which promises the happiest results. Learning, wide accomplishments, sagacity, breadth of understanding, and other intellectual gifts such as it would be hard to match, are but the least things in this gracious outfit.

—The first instalment of Prof. J. B. Thayer's new book of select 'Cases in Constitutional Law,' and notes, following his 'Cases in Evidence,' published last year (Cambridge: Charles W. Sever), is before us, and the completed work (which, the author's preface tells us, will be about four times as large), will appear in two volumes some time during the current year. The present "fragment," as Prof. Thayer terms it, deals with only three topics—the constitutions of government, the making and changing of written constitutions, and the jurisdiction of the United States. An appendix contains the Articles of Confederation, the United States Constitution, the Massachusetts Constitution of 1780, and a great number of interesting selections from different State constitutions and colonial charters. As yet the book lacks an index, though it contains a table of cases. Such a work as this, if carried out, as it surely will be, in the same careful and thorough manner, will be a great addition to a branch of legal literature already more fully treated than perhaps any other. The Constitution of the United States was explained clause by clause in the *Federalist* by its ablest framers. The debates in Convention and in the subsequent bodies of ratification of the different States remain to further elucidate it. Nor does any antiquated or obscure language or professional jargon confuse the terms of the instrument or the subsequent writings upon it, among which are the most splendid achievements of the law: the 'Commentaries' of Kent and Story; the opinions of the Supreme Bench, from Marshall to Miller; the 'Limitations' of Judge Cooley; and the comments of other observers less technical but no less profound, from Tocqueville to Bryce. Prof. Thayer's work promises to contain the great cases from Marbury vs. Madison, which first held the Constitution paramount to all other law, down to such recent cases as Leisy vs. Hardin, "the original-package case," together with selections from the *Federalist*, and other sources of comment, copious notes and reference, arranged in order, which will make the work a reference library to almost any text-book on the subject. The opening chapter even traces the source of a modern constitutional formation and theory back through Montesquieu, to whom we more immediately

owe so much, to Aristotle's 'Politics,' where the following very striking passage occurs: "In every form of government (πολιτεία) there are three departments (μόρια) . . . Of these three, one is the part which deliberates (τὸ βουλευόμενον) about public affairs; the second is that which has to do with the offices . . .; and the third is the judicial part (τὸ δικάζον.)"

—Liberality and progress have made two great strides in the University of Oxford. A last attack upon the establishment of an eighth final school, the "Final Honour School of English Language and Literature," was defeated in Congregation on May 1, when the form of statute establishing the new school was promulgated, and its preamble was finally adopted by 120 placets against 46 non-placets. The details of this statute are now open to amendment, but the establishment of the school is assured. The preamble adopted runs as follows: "Whereas it is expedient to establish a Final Honour School of English Language and Literature, the University enacts as follows." This school must include authors "belonging to the different periods of English literature," and "the history of the English language and the history of English literature." Special subjects "falling within or usually studied in connection with the English language and literature" are also provided for. Candidates must have studied their authors "(1) with reference to the forms of the language, (2) as examples of literature, and (3) in their relation to the history and thought of the period to which they belong." The study of Anglo-Saxon, and of the relation of English to "the languages with which it is etymologically connected" and of the history of English literature, is made the centre of the whole school, and a board of at least twenty examiners is provided for. Their duty shall be "to see that, as far as possible, equal weight is given to language and literature" in the conduct of the examination, "provided always that candidates who offer special subjects shall be at liberty to choose subjects connected either with language or with literature or with both."

—The second progressive vote in Congregation was carried on May 8, and amounts to the first step towards establishing post-graduate studies. Without a dissentient vote, a resolution was passed to the following general effect: New degrees are to be established, which shall be granted, after a course of special study or research, not only "to members of the University who have passed the examinations qualifying for the degree of Bachelor of Arts," but also "to persons, not being graduates of Oxford, who have given satisfactory proof of general education, and of fitness to enter on a course of general study." By a vote of 73 to 40 it was also resolved to allow those who have taken these proposed new degrees "to supplicate for the M.A. degree on paying the usual fees" when they have qualified by residence. Universities and local colleges approved by Convocation are to have "the same privilege with respect to standing" enjoyed by affiliated colleges. Without a dissentient vote it was resolved that candidates for the new degrees must be at least twenty-one years old, and that for these degrees a residence of three years in the University shall be required, "provided that residence for two years in a university or college approved by Convocation or in an affiliated college should be reckoned as equivalent to one year's residence in Oxford." Finally a Delegacy is to admit candidates, supervise their work, and authorize them "to supplicate for the proposed new degrees." This Delegacy is also to be empowered to appoint committees of graduates to report on each candidate's capacity, and, if he be approved, to superintend his work. The proposal that these new degrees be "Master of Science" and "Master of Letters" was not agreed to. It will be seen that many other difficult questions of detail are still left vague. When a definite form of statute is promulgated, all these matters will be cleared up, but the important fact remains that the University of Oxford is now committed to the establishment of degrees leading to the Oxford M.A., which may be obtained by candidates who have no Oxford degree, and will certainly be awarded on the strength of work hardly to be gauged by examination papers. A series of compromises between the German requirement of a thesis and the premium on brilliant essay-writing offered by the Oxford *Literæ Humaniores* School are likely to be initiated, but the needs of students in natural science will also have claims to a most special and careful consideration.

—The first number for 1894 of the *Archivio Storico dell' Arte* contains two short but highly interesting articles by Signor Frizzoni upon topics concerning Leonardo. In the one, he discusses the pastel heads of Apostles at Weimar, which he is inclined to ascribe to Andrea Solario, the author of a splendid copy of the "Last Supper" dating from about 1514, and now exhibited along with the ruined original. In his other article, he touches upon a question of more general interest. In a recent number of the *Archivio Storico Lombardo*, Signor Emilio Motta published a document concerning nothing less than the famous "Vierge aux Rochers." Unanimous as are the critics regarding the merits of this masterpiece, they are by no means agreed as to precisely which it is, whether the one in Paris or the one in London. The best connoisseurship has decided in favor of the Louvre picture; but as their opponents get something like support from Signor Motta's document, Dr. Frizzoni hastens to discuss its real bearing. The new document is a petition from Ambrogio da Predis (a painter to whom Morelli has ascribed a number of famous portraits passing under the name of Leonardo) and Leonardo himself to Ludovico Sforza, begging him to compel the monks of San Francesco either to pay them the hundred ducats the triptych was worth, instead of the five and twenty offered, or to return it to them. Of this triptych, Leonardo had painted the "Madonna of the Rocks," and Ambrogio the wings, each containing an angel. Now, the picture at present in the National Gallery certainly comes from San Francesco, the wings having meanwhile become the property of Duke Melzi at Milan; but Signor Frizzoni, far from being dismayed by this, points to the probability that Leonardo did take back his picture from the monks, letting them retain for their 25 ducats a copy which they cannot be blamed for finding equally satisfactory, considering that so many critics still prefer it (the National Gallery "Madonna") to the original.

—The Hawaiian Islands seem to be capable of furnishing food for thought in the scientific as well as the political world. Astronomical observations recently made there showed that the newly discovered motion of the earth's axis has opposite phases for Honolulu and Berlin; and now a new value for the mean density of the earth has been found by measuring the force of gravity at the summits of two of their highest craters. The method adopted was first used in England, but has been carried out in Hawaii on an unprecedented scale; the disturbing influence of the mountain on a plumb-line being no less than a minute of arc, corresponding to a distance of a mile on the earth's surface. Moreover, a pendulum which beat seconds at the sea-level was found to be accelerated by the attraction of the mountain by twenty-two seconds per day when carried to the summit at an elevation of 13,000 feet. The mean density of the earth obtained was 5.33. By permission of the superintendent of the United States Coast and Geodetic Survey, these results have just been communicated to the Philosophical Society of Washington by the observer, Mr. E. D. Preston, one of the officers of the coast-survey service.

—By the death of Álvaro Campaner y Fuertes, which occurred at Palma April 20, Mallorca has lost the younger of her two foremost literary men, and Spain a writer whose name is a noteworthy one in the bibliography of her historical literature. Educated for the law, Mr. Campaner filled various judicial positions, retiring, after many years of public service, with a pension. In 1859 he published a work on ancient Catalan commercial law, but he had already given evidence that his tastes lay in the direction of historical research rather than purely legal study. He obtained the prize offered by the Archduke Luis Salvador, on the occasion of the celebration of the fiftieth anniversary of the founding of the Instituto Balear, for an essay on the Arab domination of the Balearic Islands, by a monograph which was afterwards expanded into a volume and published, in 1888, under the title, 'Bosquejo histórico de la Dominación islamita en las Islas Baleares.' The author's remarkable familiarity with the manuscript and other sources of the history of Mallorca is well indicated in a quarto volume published, in 1881, by State aid, called 'Cronicón Mayoricense, desde 1229 hasta 1800.' His contributions to periodicals and society transactions elucidating obscure historical questions were numerous, and of a nature to give his conclusions the weight of authority, and his services to archæology and numismatics were acknowledged by the bestowal of honorary membership in several learned associations. It was as a numismatist that Mr. Campaner was best known throughout Europe, and his extensive and exact knowledge recognized. His collection of coins and medals is large and valuable. In addition to collaboration in the production of important works on Iberian numismatics, notably Heiss's 'Descripción general de las monedas hispano-cristianas,' his individual publications upon this topic—books, pamphlets, articles—cover a period of more than thirty years. Special mention may be made of his 'Numismática Balear,' an octavo volume, with plates, published at Palma in 1879, and of his 'Indicador Manual de la Numismática española,' which appeared at Madrid as late as 1891, and is a compact handbook to the voluminous and intricate history of the numismatics of Spain. Not only is Mr. Campaner's decease a public loss, but because of his probity, pure-mindedness, animated spirit, and warm heart, the knowledge of it will bring a sense of personal bereavement to all who have ever met him.

—Readers generally are familiar with Fra Paolo as the historian of the Council of Trent and as the adviser of the Signoria of Venice in its quarrel with Paul V. Those who desire in

addition to know him as the discoverer of the circulation of the blood, of the undulatory theory of light, and of heat as a mode of motion, and also as the originator of Locke's 'Essay on the Understanding,' can consult the Rev. Alexander Robertson's 'Fra Paolo Sarpi' (T. Whittaker), a small volume of about 200 pages. It does not contain, apparently, the results of any original research, but recites in somewhat exaggerated style the well-known facts in the career of the remarkable man whom the author characterizes on the title-page as "the greatest of the Venetians" and elsewhere as "undoubtedly one of the greatest thinkers the world has ever seen." The reader, perhaps, would feel more confidence in Mr. Robertson's estimate of his hero if he had not manifested partisanship so intense as effectually to disable his judgment. It is somewhat late in the day to allude to Cardinal Pole as "the traitor Reginald Pole," to speak of Sixtus V. as a martyr to reform, whose poisoning by the Jesuits "is well authenticated," and to assert that "of all human institutions monasteries seem most liable to slide into disorder, degeneracy, and depravity." Sarpi as a youth was unusually precocious; when he was but eighteen years of age, in 1570, he was appointed professor of theology at Mantua, but it was not necessary for Mr. Robertson to exalt his precocity when in 1578, at the age of twenty-six, he was honored by the great university of Padua with the degree of doctor of theology, by saying that, "being but twenty years old, he was the youngest man ever so honored by this ancient university." The volume, in fact, is amateurish throughout, and the author shows himself indifferently equipped for a subject worthy of the labors of the most industrious and conscientious scholar.

LETTERS OF COUNTESS GRANVILLE.

Letters of Harriet Countess Granville. 1810–1845. Edited by her son, the Hon. F. Leveson Gower. 2 vols. Longmans. 1894.

THE writer of these delightful letters was Lady Harriet Cavendish, younger daughter of the fifth Duke of Devonshire and wife of the first Earl Granville. The letters are addressed to her only sister, Lady Georgiana Morpeth, whose husband became the sixth Earl of Carlisle; to her sister-in-law, the Countess of Harrowby; and to her only brother, the sixth Duke of Devonshire. Lord Granville (then Lord Granville Leveson Gower) was sent to Oxford at the age of fifteen, and there he formed a lifelong friendship with Mr. Canning. In 1824 Lord Granville, having already been British Ambassador in Russia, was sent to The Hague, but after a few months there he was transferred to Paris. He was British Ambassador in Paris from 1824 to 1828 and again from 1830 to 1841. It was mainly due to Lord Granville's influence that a war between France and England in 1840 was averted. The strain and anxiety which he underwent at that time brought on an attack of paralysis from which he never entirely recovered, and he died in 1846. Lord and Lady Granville's marriage was one of more than ordinary happiness. Her ever-increasing affection for her husband and her fresh vivacity supported Lord Granville through the many trials of a career as difficult as it was prosperous. Of their five children one son died young. The eldest was the late Lord Granville, so long one of the most distinguished members of the Liberal party in England. The third son, the editor of these letters, represented Bodmin in Parliament for twenty six years. The elder daughter, the Susan of the Letters, married the fourth Lord Rivers. The second daughter, Lady Georgiana, married Mr. Fullerton, and was the author of several novels, of which 'Ellen Middleton' is the best known. A very interesting Life of Lady Georgiana Fullerton has been written by Mme. Augustus Craven.

Lady Granville throughout her life held the strongest view of the importance of duty. The duties which fell to her lot as ambassadress were generally very distasteful to her, but she never failed to fulfil them not only thoroughly but cheerfully. Her own standard of right was a high one, and while she admired those who acted up to it, she was full of indulgence for those who fell short of it. She mixed with all the celebrated and distinguished people of her day, and her comments on them, though always amusing or interesting, are never unkind. She found it possible to remain unspotted from the world while compelled to lead a life which might well have been both selfish and worldly in the highest degree. After Lord Granville's death Lady Granville shrank from all society but that of her children and nearest relatives. She died in 1862, fifteen years after the death of her husband.

Lady Granville was able to describe a scene or a character in a few graphic words:

"I have made acquaintance with [Lord Byron]. He is agreeable, but I feel no wish for any further intimacy. His countenance is fine when it is in repose, but, the moment it is in play, suspicious, malignant, and consequently repulsive. His manner is either remarkably gracious and conciliatory, with a tinge of affectation, or irritable and impetuous, and then, I am afraid, perfectly natural."

"[Lady Morley] falls upon the flatness and ennui of London society like rain upon a parched field."

"[Lady Binning's] conversation is like what the *Quarterly Review* says of Sir John Carr's last work, 'a heavy fall of the lightest possible materials.'"

"[Lord Harrowby in general conversation] is a little too much 'squared to nicest rules.' The grammar is so good, and the period so neat. I do not mean to say that these are not desirable points; but, as Hannah More says of good housewifery, one should see the effect and not the details."

"I quite love the Duke of Wellington. He is neither an agreeable man nor in my eyes a *héros de roman*, but he is the most unpretending, perfectly natural and amiable person I ever met with."

"Lady Grantham looks amongst [the French ladies] like a moon shining upon a common of furze bushes."

Lord and Lady Granville spent a short time in Paris during the visit of the allied sovereigns in 1815. Lady Granville writes:

"The Emperor of Russia . . . has taken a new and grave line, *se promène dans son jardin*, and only with the ugly and the old. The King of Prussia prowls about after his own heart without exciting much attention, and the Emperor of Austria is never seen at all."

"[The ball given by the Duke of Wellington] was a most extraordinary one, about four hundred men to forty women. . . . I met Talleyrand waddling out; he did not speak to me, so I had only the satisfaction of seeing his dirty, cunning face and long coat for a moment. After him came Fouché, a little spare, sallow, shrewd-looking man, who seems to unite all parties in one common feeling—horror of his character, and the policy of not betraying it. He is, I conclude, the worst and the most useful man the King could have found in his whole dominions."

"[The Duc de Rohan's] vanity is like a farce. Somebody was complimenting him on his having an expressive countenance. He said, 'Oui, mais il faudrait me voir quand je prie.'"

Lady Granville gives an interesting account of the trial of Queen Caroline in 1820. She had "an unshakable conviction of the Queen's profligacy," and took the same view as the Archbishop of Canterbury. "He says it is better that the bill should be thrown out with the moral conviction in the higher orders that she is guilty, than carried with the moral conviction in the lower orders that she is innocent." Lord and Lady Granville spent the Christmas of 1824, just before their departure for The Hague, with George the Fourth at Brighton. The invitation to the Pavilion was for nine days, and each lady was expected to provide herself with nine new gowns. Lady Granville writes that "the King is all gayety, graciousness, and nimbleness, . . . his kindness quite moving. But never was anything so dull. The intense heat [of the rooms] makes us all languid, we eat too much, and there is no variety of society and lots of royalty." Lady Granville thoroughly enjoyed The Hague, as she had her day to herself and received visitors only in the evening. She was supposed never to look at pictures, but her descriptions of those at The Hague and at Amsterdam are most vivid. The Dutch court was very formal. Lady Granville says:

"This morning I went, all over diamonds and black satin, to Court. A little *grand-chambellan* leads me from the door to an anteroom where four *dames d'honneur* receive me, till the folding-doors open and I walk in alone to the Queen, standing in the middle of a very large and handsome *salle d'audience*. She is a shy, quiet, well-behaved woman, in miserable health. . . . We talk of our royal family, of the loss of our horses [which died on the voyage], of the size of my house, and of the weather. A little back door opens and the King drops in. Five minutes more small royal talk, and then I back out with a train five yards long."

When Lord Granville was transferred from The Hague to Paris, some of Lady Granville's English acquaintances imagined that she would be dazzled by the greatness of her new position. Her own view of the change was very different. She writes from The Hague:

"For my own feelings, they are selfishly fear of any change of a place and life I like so much, dread of all the worries and duties of Paris, late hours, *grande parure*, visits, presentations, all my favorite aversions. Then comes the thinking Granville will prefer it, that my children will have better masters."

Lady Granville determined to conquer her aversion to dress and to dissipation, and so well did she succeed that she became the most popular English Ambassadress ever sent to Paris. She writes:

"I hope you will find me a laboriously dressed woman." "I am already half an *élégante*." "My face, as Mr. Hill once said, 'Lord help it'; but my *mise* was faultless." "My person is like those *mélodrames* got up at Covent Garden—no merit in the piece, but saved from being damned by the machinery." "There are invariable rules, which is a blessing: never to mind the effect, but to sit still and have it done, as to a dentist."

"I am aware that dress has been a grievance and occupation to me that it would not have been to another, save the Queen of the Sandwich Islands and Mrs. Poki. I saw the imperious necessity of it, and am learning it as a trade. The irksomeness of it, therefore, is daily diminishing. I am also aware that dissipation is a duty, and therefore the sting of it, as a fault, is taken out."

"I am absolutely baked into civility." "I am so anxious to do well that I hope I shall, but some of my duties are difficult to me. To avoid intimacy of communication, to have a degree of repelling civility of manner, to have no preferences and create none—all this will rub my back up the wrong way, but I think over my part so much that I must end by learning it." "The activity and energy of my proceedings, the unwearied loss of my time, leaves no one trace of usefulness or real good behind it. . . . However, I am not wholly discontented with myself. I never taught my children so much and so regularly as since I have been at Paris. I have made myself rules with regard to them

which I do not allow myself to transgress." "The height of my earthly aspirations is to be allowed to abstain from pleasure." "There is one enjoyment which I earn with the sweat of my brow . . . —bedtime."

The presentation of an Ambassadress at the French court in 1824 was called the *traitement*. Lady Granville says that her behavior on the occasion was thought of so much consequence that she felt as if she were going to be hung, and all her reputation turning thereon. The Ambassadress was then invited to a great dinner at Court, she naming the guests, who must be of the highest rank of her own nation. In Lady Granville's case her own husband could not go unless invited by her. Lady Granville, shortly after her own presentation, had to attend that of the Spanish Ambassadress, who knew not a word of French and had been dragged into Paris by ten mules. Lady Granville writes:

"I pitied this poor little woman with *connaissance de cause*, but had a sort of delight at assisting instead of performing. . . . I came home at eight tired to death. Had to undress completely, lie down for a couple of hours, and then rise again out of my ashes to dress a second time for Lady Waterpark's ball."

Lady Granville did not at first enjoy the society of the French ladies, whom she thought pedantic and frivolous, and of whom she wrote:

"It is odd that their effect upon me is to crush me with the sense of my inferiority, whilst I am absolutely gasping with the sense of my superiority. . . . The truth is, they have an *aplomb*, a language, a dress *de convenance*, which it is as impossible for me to reach as it would be for one of them to think five minutes like a deep-thinking, deep-feeling Englishwoman."

Lady Granville's opinion of French society was afterwards much modified. She writes of Queen Marie Amélie, after the attempts on the life of Louis Philippe in 1832: "Only think what the Queen must at moments feel when she fears for the safety of those she devotedly loves, and without one taste or object gratified that can bring one grain into the balance. She has more dignity and calmness of manner than anybody, and I never saw any one who brought such conviction to one's mind that 'her help is from above.'"

Lady Granville had much pleasant English society during her residence in Paris. Of one friend she says: "He chews the cud of conversation; takes no notice at the time, but, two days after, 'You said so and so,' not, as one expects, to confute, but merely to state it over again as digested and approved." But "men so little understand the comfort of talking a great deal about nothing at all."

RECENT FICTION.

Ships that Pass in the Night. By Beatrice Harraden. G. P. Putnam's Sons.

In Varying Moods. By Beatrice Harraden. G. P. Putnam's Sons.

A Superfluous Woman. Cassell Publishing Co.

Links in a Chain. By Margaret Sutton Briscoe. Dodd, Mead & Co.

The Rousing of Mrs. Potter, and Other Stories. By Gertrude Smith. Boston: Houghton, Mifflin & Co.

On the Offensive: An Army Story. By George I. Putnam. Charles Scribner's Sons.

As long ago as in 1853, Mrs. Sarah Austin complained to M. Guizot that modern novels were "party pamphlets," "painful dissections of the least agreeable and beautiful parts of our nature," or a "kind of martyrology"; and she instanced a recent one from the hands of a woman as being "one of the many proofs of the desire women now have to *friser* questionable topics and to *poser* insoluble moral problems." Mrs. Austin did not live to read the pamphlets, the dissections, the martyrologies of to-day, or her language might have been even stronger. At a time when the best friends of women are asking, "Has woman purified literature?" it is a pleasant duty to note among their writings one like 'Ships that Pass in the Night,' which is not written on the assumption that free thought is necessarily offensive thought, or that emancipation means license morally or literarily. Essentially modern in *mise-en-scène*, manner, and touch, belonging in its literary attitude to that advanced school of novels which largely owes its existence to women writers, and which might not inaptly be called the University Extension of Fiction, this little story is yet full of the tender grace of a day not wholly dead. It is clean, it is piquant, it is healthy; and this notwithstanding that its hero and heroine meet at a Continental resort for consumptives where are gathered together the evil and the good, and notwithstanding that they are both bristling with modern views of life and humanity. It is because, with every reason for morbidness in the destiny of the two invalids, they refuse to be morbid, that the story speaks nearly to every one who is interested in observing the effect of the modern idea on the enigmas of living. The world-old question of pain is met in the modern way, by another question, "Who knows?" yet it is done with the reverence, the sweetness, and above all with the sunshine, that the moderns sometimes omit. To think of others and to be sane is the wisdom which all the learning of colleges cannot better. Dogma died before this man and woman were born; creeds never existed for them; yet they set their lives to the most orthodox of doctrines—that of the sweet and sunny. To this they are brought by grace rather than by nature; the woman learns it through suffering, and the man, later, but at last, learns it from the woman. They do what they must, growling a little, in a wholesome way, but never whining and always hoping.

'In Varying Moods,' a collection of short stories by the same author, is also full of the combined tenderness and cheer which mark the former volume. There is here the same sanity, the same determination to see the best in life and to fling over the worst a mantle of hope, kindness, and humor. The most striking virtues of the book, indeed, have been already welcomed in 'Ships that Pass in the Night.' To read this is in the main like reading that, so far as the animus goes, and even further; the likeness extending to phrases and incidents. "The Green Dragon" is the most interesting one of the collection as a story, but "The Painter and his Picture" is the most perfect artistically and the most suggestive spiritually. The stories of tragic incident are least coherently made. The preface tells us that they are more truth than fiction, but the burden of proof lies with the author to make them seem real, and they do not. "Joy and Sorrow" is almost the allegory of "Failure and Success" with which Bernardine began her book; "A London Idyl" is delicate and gracious; "A Bird of Passage" trills a clear cadenza through mountain air at dawn. The conclusions resulting from the whole are a sense of its rare merit as picture-book and lesson-book; an impression that the author has given the best of it before; a suspicion that wholesomeness might, by too much advocacy, grow conscious, and the reflection that it would be a thousand pities if so sweet and cleanly a pen should not keep itself, by rigid restraint, at the topmost height of its interest and power.

But what would Mrs. Austin have said of 'A Superfluous Woman'? Published anonymously, it is unquestionably the work of a woman, and deals with several of the topics which have conspicuously figured in recent novels, and which, from being startling, have become tiresome. The epileptic children of dissipated fathers, for instance, are getting overworked as the property of the literary stage. A woman tired of luxury seeks novelty in the peasant life of some Highlanders; becomes for a brief time a peasant, then a pagan; then, since her lover, though peasant, is not pagan, flees back to London to become the wretched wife of the best catch of the season. While the passion of an over-civilized young Londoner for a son of the soil may be a new subject, it is not attractive. It is repulsive on merely æsthetic grounds, and becomes so on moral grounds when the lady's love proves to be of the sort that "had the quality of self-abandonment, but could not rise to sacrifice. Shame she would have accepted, but noble endurance was as yet beyond her." In becoming the wife of a rake and the mother of two epileptic children, who kill each other in a nursery fight while she is atoning for her sins by resolutely and, as it proves, effectually, praying for the death of the third one yet unborn, she flourishes before us as an example of what the heroine of fiction has become since Mrs. Austin's day, and a beacon-light of suggestion as to where she may yet arrive.

The inevitable doctor in such stories, quack and omniscient, ascribes Jessamine's troubles to a lack of brain and an over-developed but meaningless strength and sweetness, so that, if the story has any purpose, it is perhaps meant to be that women should encourage their brains. There is no fault to be found with this moral; it is the text-book that is superfluous along with the woman. It belongs to the class called "strong," a term used in the studio and the dairy. The style is as of one struggling dutifully after complexity; and yet (to give it its due) there are at intervals good things excellently said:

"Colin had the sort of greatness which can see the thing in its essence without the small, despairing restlessness of those who curiously inquire into the imperfection of detail. The lasting and the eternal were enough for him; the passing flaws went unconsidered."

"Behind the mounting steps of Evolution creeps the stealthy shadow Atavism, like old guilt which can never be repudiated any more." "One-half of us seems running backward to embrace the unspeakable ancestor, while the rest reaches forward to the high level of posterity."

"It [unsophisticatedness] falls insensibly from the catalogue of modern qualities, and its possession, though refreshing, begins to argue an intellectual want. In truth, native unsophisticatedness of soul is being exchanged for that less fleeting possession—the simplicity which is the result of choice and of deep thinking. As old good things go, new good things come, and loss is mingled with gain."

"The mischief with women is that they are too sympathetic. I am convinced it is an indication of contempt. I have remarked that every woman thinks all men beneath her, save the one she is in love with."

If Miss Briscoe's 'Links in a Chain' had been called 'Links Not in a Chain,' it would have been more truly entitled, for while the chapters, taken separately, are sufficiently readable, they are wholly desultory. The fact that one

man figures in them all does not make any relationship among them. This man is one of the elderly, all-wise, all-efficient fairy godfathers of all young persons in trouble. He is consistently successful in all that he attempts, and some of the scenes in which he figures are piquant and interesting, however improbable. The final chapter breaks away from the hero, and shows his young wife converting to religion, in a waifs' lodging-house, a former lover who has gone wrong through her fickleness. The description of the house and its superintendent is cleverly done, but the final scene is so bathetic that one longs to beg this facile, ingenious, and observant young writer to attempt no more chains, which seem to hamper her, but to give us links only.

We have failed to discover in Gertrude Smith's stories anything that one cannot find better done in Miss Wilkins's stories, of which they are obviously the consequence. They have in most cases moved to Kansas, which is a variation certainly, but on the journey they have contrived to lose that sense of climax which always points Miss Wilkins's stories, even those most demurely, not to say almost babyishly, simple in their form. Gertrude Smith's have the form, but reach this culmination only occasionally. Wilkins writ small does not commend itself to us as a perfectly happy experiment, but lucidity is so strong an attraction that these little stories will no doubt find their admirers.

Mr. Putnam's second army story is written in the quiet, forcible style of his first, some of the characters of which reappear here, together with others equally well drawn. What the author has said of a short sketch is applicable to this later work: "Whatever this tale may lack, it at least has truth." The descriptions are true and accurate; there is no exaggeration of the dark side of garrison life, and no attempt to throw a glamour over it. We meet again with sincere and just criticisms of army maladministration, especially of the policy which offers no stimulus to an officer to go beyond the mere routine of drills and duty. In the struggles of Lieut. Spurbridge to decide whether to remain in the stagnating army or to enter upon a literary career, on which the plot of 'On the Offensive' hinges, is involved a candid discussion of what a military career under the republic offers in time of peace, the earnestness of which may be due to the fact that the writer, too, left the army to engage in literary pursuits. To politicians and philanthropists who so frequently fall foul of our little army in its relation to the Indians we would especially recommend the description of the Indian uprising, an excellent piece of writing, and as just as it is able. It is a pity that Mr. Putnam occasionally lets his descriptive ability run away with him. A little more action would greatly enhance the book's value in the eyes of non-professional readers.

BOOKS ABOUT THE STAGE.

Le Théâtre. Par Francisque Sarcey. Paris: Société Artistique du Livre Illustré; New York: Dyrsen & Pfeiffer.

Trucs et Décors: la Machinerie Théâtrale. Par Georges Moynet. Paris: Librairie Illustrée; New York: Dyrsen & Pfeiffer.

Essai sur l'Histoire du Théâtre: la Mise en scène, le Décor, le Costume, l'Architecture, l'Éclairage, l'Hygiène. Par Germain Bapst. Paris: Hachette; New York: Dyrsen & Pfeiffer.

Sur les Planches. Par Albert Lambert. Paris: Flammarion; New York: Dyrsen & Pfeiffer.

THE Société Artistique du Livre Illustré has made a beginning by publishing two little books in editions limited to 532 copies. One of these is on the Newspaper and the other is on the Theatre; and both recall to mind the little books of half a century ago in which Balzac and Alphonse Karr in Paris and Albert Smith and Robert Brough in London sketched the typical medical student, or soldier, or ballet-dancer. There is a further lack of novelty in the illustrations in these carefully printed pamphlets, for they are chiefly woodcuts scattered through the text as in our own magazines, but having, perhaps, more *brio*, more *chic*—a cleverer swing than most of our eminently respectable illustrators exhibit. The best of these drawings are by M. Lepère, who has not, however, engraved his own blocks; and M. Lepère's also is the best of the three etchings—that representing "Le Chat Noir." It is a fair guess that the illustrations were prepared first of all, and that then M. Sarçey was requested to write up to them; and there is perhaps, therefore, more than a suggestion of perfunctoriness about this account of the theatre as it strikes the leader of Parisian dramatic critics. Of course, M. Sarcey knows his subject through and through, but on the present occasion it has failed to inspire him—at least we do not find in these sixty pages any of the delightful paragraphs of his, Voltairean in their irony, and commingled of common sense and wit and an affectionate knowledge of the subject. Perhaps the freshest pages are the earliest, in which he sketches the Conservatory, and tells us that now in France the stage is looked upon as a regular career, having lost its reputation of Bohemianism and being in full favor with the *bourgeoisie*, from whose ranks the theatre is to-day drawing the most of its recruits.

M. Georges Moynet is already known as the author of an interesting and useful volume in the "Bibliothèque des Merveilles" on 'L'Envers du Théâtre,' the substance of which (with the best of the illustrations) was reproduced in *Harper's Magazine* nearly twenty years ago. In his new and larger volume, 'Trucs et Décors,' he has returned to the same subject, treating certain parts of it with ampler detail and with more abundant illustration. With the aid of more than a hundred cuts of one kind or another, sometimes mere sketches, and sometimes almost as elaborate as a working drawing, he describes the stage of the best equipped modern theatres, the mechanism of the scenery, the building and management of transformation scenes, the construction of traps and of trick scenes and of the most ingenious stage devices, the arrangement of the lights and of various optical delusions, and a host of other stage secrets. His knowledge is full, and his explanations, clear in themselves, are further elucidated by the illustrations. No single cut in M. Moynet's book is perhaps as comprehensive and as enlightening to the novice as the two diagrams in the 'Century Dictionary' under the word *stage;* but there are not a few of his chapters from which the most expert can increase his knowledge of the possibilities of stage illusions. Especially interesting, for example, is the fully illustrated account of the very elaborate and highly artistic machinery used in the Paris Opéra for the aerial flight of the equestrian Valkyrs in the recent production of Wagner's "Walküre."

M. Moynet also gives drawings disclosing the working of the horse-race scene in the "County Fair," invented by Mr. Neil Burgess and used in Paris recently in a *revue*. In general he is quite Parisian in his point of view, and he never ceases to be European: thus, when he describes the hydraulic machinery of the Budapest Opera, he does not refer to Booth's Theatre here in New York, where more than one of the same devices were anticipated a quarter of a century ago; and although he illustrates freely the artfully contrived water-effects in the Kiralfy spectacle of "Venice in London," he makes no reference to "America" at the Chicago Auditorium, or to the singularly beautiful spectacle of "Columbus" which Mr. Kiralfy arranged for the Barnum & Bailey show in the Madison Square Garden two or three years ago. Yet he, like M. Nuitter, the learned archivist of the Opéra, is forced to admit that it is only in artificial lighting, in the advantage given by gas, by the calcium light, by the electric light, that the spectacles of this century are superior to those of the Renaissance in Italy, where the engineers were as far advanced then as their followers are now in France, England, and America.

M. Germain Bapst's report, prepared for the Paris Exhibition of 1889, is a sumptuously illustrated volume, and very welcome, though it is but a fragmentary history of the theatre. It begins with the mysteries, and considers next what the author calls the patriotic mysteries, the French equivalent of the English chronicle-plays. It offers, perhaps, the most detailed account yet prepared of the stage and scenery and costumes and machinery used in the representation of these primitive plays. From the Middle Ages M. Bapst passes to the Renaissance, and illustrates the physical conditions of the theatre when "Mirame" was brought out. Then he takes in turn the seventeenth, the eighteenth, and the nineteenth centuries, of course confining himself almost altogether to France, but still showing the regular development of theatrical taste with the growing demand for exact reproduction on the stage of the mere facts of real life. The future author of the much-needed history of scene-painting will find a mass of material collected ready to his hand in M. Bapst's pages—not critical remarks only, but illustrations of recent masterpieces of the art in France. One of the best of these is a sketch of the marvellously picturesque and appropriate scene devised for the production of "Oedipe Roi" at the Théâtre-Français ten years ago.

Nowhere is scene-painting more artistically subordinated to the dramatic interest of the play than at the Théâtre-Français, and nowhere is stage management more skilful in bringing out this dramatic interest and in revealing it to the spectator by an ingenious arrangement of entrances and exits, of gestures and groupings. This is a part of dramatic art which the ordinary playgoer rarely thinks about, and as to which he is wholly ignorant. M. Albert Lambert's book, 'Sur les Planches,' is in the main an essay on this difficult art of stage-management; and all lovers of the theatre who want to understand how it is that a performance by the Comédie-Française seems so harmonious, may be recommended to read M. Lambert's explanation of the cost of this harmony in thought and toil and patience. In the history of the theatre certain stage-managerial effects are celebrated and have become traditional—as has, for example, John Philip Kemble's arrangement of the trial-scene of "Henry VIII.," so that Mrs. Siddons, as *Queen Katherine*, could wave down *Campeius* with a mighty sweep of her arm which brought her face to face with *Wolsey* as she said: "My

Lord Cardinal—to *you* I speak!" Similar in legitimate and interpretative effect was the way in which the Meiningers played the forum scene of "Julius Cæsar," *Mark Antony* speaking at first to a heedless mob whom he wins over one by one. M. Lambert gives us no English or German illustrations like these, but he has put on record a series of French traditions handed down by one group of actors of Molière to another, some of them perhaps going back to Molière himself.

The Story of Our Planet. By T. G. Bonney, D.Sc., LL.D., etc., Professor of Geology in University College, London, etc. Cassell Publishing Co.

PROBABLY no single work has had more influence upon the science of geology, or done more to diffuse a general knowledge of that science among the more educated portion of the lay community, than Lyell's 'Principles of Geology.' Appearing first in 1830 in a single volume, it went through eleven editions, successively revised and brought up to date by its author, the last of which, published in 1872, in two royal octavo volumes, had increased to about double the size of the first. Although Lyell was an observer of no mean order of ability, his principal merit lay in his judicial and discriminating faculty, which enabled him to sift out from the observations of others the essential and important facts, and weave them into a logical and consistent theory of the history of our globe. He was the great exponent of the uniformitarian school of geology, which holds that the processes by which earlier changes in the structure of the earth have been brought about were similar in degree and kind to those going on at the present day, and refrains from appealing to violent convulsions of nature, or catastrophes, as was the practice among the earlier geologists. His 'Principles of Geology,' as its name implies, gave the broader explanations of geological phenomena, which are of interest not only to the geologist, but to the intelligent layman, leaving to textbooks and manuals the underlying details, a knowledge of which is essential to the professional student, but not to the general reader.

In the twenty years that have elapsed since Lyell's death, strict uniformitarianism has been more or less departed from by geological reasoners, and the theoretical views held in his day have received some important modifications; but no general work has been written which, while adhering to strict scientific accuracy, presents the existing condition of geological thought in sufficiently vivid and untechnical language to be attractive to the general reader. To fill this want has been the aim of Prof. Bonney, as he states in his preface, in writing 'The Story of Our Planet.' Although not prominent as an original investigator, Prof. Bonney's long experience as a teacher and lecturer, and his intimate association with the leaders in scientific investigation in England, have well fitted him for the task. In common with most English geologists, and in contrast with too many of their American colleagues, he is an enemy to affectation in language, and writes a vigorous and incisive Anglo-Saxon English, not larded with countless technical words derived from Greek and Latin roots that render them unintelligible not only to the layman, but even to the professional man who does not happen to belong to the same little scientific coterie as the writer. We are so thoroughly in sympathy with his course in this particular that we cannot refrain from quoting the following from his preface:

"Technical terms, as I venture to think, are sometimes coined without good cause. The use of them seems to be pleasing to some minds, for it indicates an initiation in mysteries and a superiority to the common herd. But from a terminology not generally intelligible worse evils than the gratification of personal vanity are apt to arise—namely, the worship of phrases and the substitution of words for ideas. Science as it grows suffers from its epidemics, and high-sounding words are often bacteria which communicate disease to mental constitutions of the less vigorous type. To some persons a sonorous term seems, too, so satisfactory that it passes current for an idea, and is a mask for any amount of hazy indefiniteness. We are often told that plain living and high thinking go together in daily life; may it not be that plain speech and accurate thought are not so far apart in science?"

From a scientific standpoint the principal criticism to be made upon Prof. Bonney's book is the want of familiarity it shows with the best and most recent advances in geological thought on this side of the water. Whether this is to be ascribed to his insularity, or to a certain prejudice against the style of some American scientific writing to which the above-quoted remarks are more or less applicable, it is not for us to say. As a rule, in his treatment of theoretical questions he is fuller and more accurate in those which fall partly within the domain of astronomy and physics, such as the nebular hypothesis, the age of the earth, the cause of climatal change, than those which are more strictly the result of geological observation. Thus, he includes in the Archæan all rocks below the Cambrian, ignoring the great thickness of intermediate sedimentary beds now distinctly recognized by American geologists as representing a longer period in the earth's history than the entire Cambrian era, or indeed than he assigns (on the authority of an American geologist, Heilprin) to Cambrian and Archæan combined.

So far as we have observed, however, he gives very impartial presentations of the arguments on both sides of all mooted questions, and in such language as to make them quite intelligible to the reader of average intellectual capacity. As might have been expected, his practical illustrations of geological phenomena are in large measure drawn from the British Isles, as he has evidently never visited America. This is not necessarily a disadvantage to the American reader, for if he have sufficient interest in the subject to master the theories and facts presented in this volume, he will undoubtedly wish to take up some more technical work, where the illustrations will probably be drawn in great measure from American phenomena, and thus have the additional interest of novelty. As compared with Lyell's 'Principles,' Bonney's work is much less systematic and thorough, but this is more or less necessitated by its smaller size; and conciseness in the present day, when bookmaking has so enormously increased, is a condition of being generally read. Almost every important general topic of the science is here included except that of the advent of man upon the earth. In typographical execution the book leaves nothing to be desired, and, what is very important, its illustrations are abundant, excellently executed, and for the most part well chosen.

Abraham Lincoln: Complete Works. Comprising his Speeches, Letters, State Papers, and Miscellaneous Writings. Edited by John G. Nicolay and John Hay. 2 vols. The Century Co. 1894.

EVERY ONE who owns the ten volumes of Messrs. Nicolay and Hay's Life of Lincoln will desire to possess these two uniform volumes in completion of the "human document," and will be thankful that their bulk is no greater. To a certain extent they include matter not Lincoln's, yet complementary to his, notably Douglas's speeches in the famous debates; and this indispensable example should have been followed in other instances, or else references should have been given to works containing the desired information, even to the Life itself. We will cite the case of Lincoln's protest against certain resolutions of the Illinois Legislature in March, 1837 (the year of Lovejoy's murder, but the date in advance of that event). The protest, standing alone, has, for readers of the present day, almost a pro-slavery aspect, and the point of it can be understood only by reference to the resolutions themselves. Either these should have been printed in full in connection with the protest, as Herndon prints them, or the editors could in one line have directed the inquirer to vol. i., pp. 140-150 of their own Life, where the resolutions are summarized. But in fact there may be said to be no footnotes in this collection: we have counted but three altogether. We will furnish one more illustration of the same defect. On p. 577 of vol. ii. occurs a telegram from Lincoln, September 17, 1864, to Gen. Sherman at Atlanta, saying: "I feel great interest in the subjects of your despatch mentioning corn and sorghum, and the contemplated visit to you." This looks like a blind, as if a sort of "chops and tomato sauce" cipher. How easy it would have been to refer to Sherman's Memoirs, vol. ii., pp. 138, 139, for the occasion of this enigmatic reply, all the more because one thus turning back would find Sherman's communication as interesting as the President did, at least in respect of historic instruction.

The telegrams, and notes of transmission of messages, etc., and brief formal dictations to the private secretary, or requests of Cabinet officers, seem often not worth the space, especially when without explanation. Of omissions we observe only one which is in the nature of concealment, and that is the pseudonymous lampoon which led to Lincoln's duel with Gen. Shields. Herndon gives it, and our editors print the correspondence with Shields, and to Herndon they should have referred for the text, since they omitted it from their Life. We miss, too, any newspaper reports of Lincoln's speeches in Massachusetts in the Taylor campaign in September, 1848, though we are allowed such abstracts in the case of the Connecticut speeches in the spring of 1860—an occasion of much less historic moment. In 1848 Lincoln ventured down among the Conscience Whigs and chaffed them on their Free Soil platform, and won his applause from that wing of his party which would, in 1860, vote against him, and sympathize more or less with the South throughout the rebellion. Herndon very properly gathers together the newspaper abstracts, imperfect as they are, and tells of "Colonel Schouler, of the Boston *Atlas*," a Webster Whig paper, arranging for Lincoln's speaking in the neighborhood of Boston. Messrs. Nicolay and Hay are so little in touch with this episode that, in printing a letter of Lincoln's, after his return to Washington, dated February 2, 1849, and addressed to "Friend Schooler," they preserve the misspelling in their caption and blank the Christian name: "—— Schooler." William Schouler, the father of the historian of the United States in our day, was afterwards Adjutant-General of Massachusetts under Gov. An-

drew, and wrote a history of Massachusetts in the war.

As a rule, Lincoln's faulty orthography, especially in his youth, is silently corrected by the editors. In some of the letters to his one-time flame, Miss Owens, which they derive from Herndon, "I've" is even slicked into "I have," and a colloquialism like "hypo" is quoted, as if Lincoln were conscious of its not being good style. In another letter "gal" is similarly treated. We observe numerous discrepancies in the reproduction of letters common to Herndon and to this edition, and sometimes feel that our editors have been careless: but for their own defence they might well have indicated the source from which they copied, and in the case of MSS. this would have had the additional advantage of revealing the ownership of the originals. A bibliographical note on the speech at Gettysburg, which has so many variant readings, would have been a boon. Finally, we ought to have a running date at the head of each page, in order to find our place in this medley of long and short papers.

We have perforce been critical in our remarks if we were to say anything, for it would be idle to talk about the contents of these volumes *per se*, either as to their value in American history or as to the convenience of this form of publication of them.

The Mark in Europe and America: A Review of the Discussion of Early Land Tenure. By Enoch A. Bryan. Boston: Ginn & Co. 1893.

THE theory of the Mark has occupied a prominent place in the discussions of historians and economists for nearly half a century, and interest in the subject has greatly increased since the rejection of the old theory by Seebohm and Fustel de Coulanges. The acceptance of the new doctrine involves a complete revolution of opinion, not merely regarding the nature of village life, but also concerning the constitution of mediæval society in general, the status of the great mass of the population of western Europe during the early Middle Ages, and the historical development of property in land. Attempts have also been made to turn the old theory to practical account: in it the advocates of state ownership of land have found an historical basis for the support of their proposed legislation.

Mr. Bryan's book presents "a sketch of the history of the theory during the past forty years, and is not intended, primarily, as a presentation of the original documentary evidence." The author is an ardent disciple of the new school, and hence denies the existence of the free-village community. He presents quite fully the extreme deductions of the early advocates of the mark theory and the arguments of Seebohm and Fustel de Coulanges, but he does not bring out clearly the modified views of such recent writers as Vinogradoff, Glasson, and Andrews. Hence some readers will carry away the impression that we are forced to adopt either the exaggerated details of the theory as presented by Kemble and Maurer or the other extreme as advocated by Seebohm and Fustel. But the truth is that one may believe in the coexistence of the manor and the free-village community; one may even believe that in the free village itself there was some inequality of rank and some private property in land. In short, one may accept the essence of the mark theory without accepting Kemble's "idyllic" picture of democracy. Moderate disciples of the old school are quite willing to concede that in the time of Tacitus indications may be found of the existence of private ownership of land, social inequality, and serfdom; but they reject the view that the manor was the typical form of village life and that the mass of the population was in serfdom. A serious defect of Mr. Bryan's book is his failure to recognize the existence of a class of historians who think that Kemble and Fustel de Coulanges advocate two extreme theories.

Mr. Bryan tries to be impartial, but he seems to take it for granted that recent writers who reject the conclusions of Seebohm and Fustel have approached the subject with ineradicable prejudices in favor of an established theory or have been misled by sympathy with modern democratic tendencies. The fact is that most well-trained historical students are quite willing to adopt revolutionary theories; they have not welcomed Fustel's arguments, simply because these are not convincing. Many eminent historians firmly believe that Fustel, though a man of great ability, was guilty of the same sort of aberrations as were Kemble and Maurer. Flach, in his recent work ('Ancienne France,' vol. ii.), demonstrates that Fustel's data regarding the prevalence of manors or *villae*, as distinguished from free villages or *vici*, are entirely unreliable; that, in short, Fustel's use of contemporary records is quite unscholarly. This is also the opinion of other French historians who have handled the original sources. Mr. Bryan takes it for granted, however, that Fustel's arguments are flawless, and that all of his deductions are to be accepted without hesitation. If the new school finds no stronger mainstay than Fustel, its doctrine will not prevail.

Moderate adherents of the old view will have no difficulty in accepting the main conclusions of Mr. Bryan's last two chapters, which are entitled "The Mark in America," and "The Mark in Economic Discussion." He is right in asserting that it is hardly possible to find in the New England settlements "any of the distinguishing characteristics of the Teutonic mark theory which may not be otherwise accounted for." It is difficult even for ardent advocates of that theory to believe that early New England institutions were "derived from the forests of Germany."

Recollections of a Virginian in the Mexican, Indian, and Civil Wars. By General Dabney Herndon Maury, ex-United States Minister to Colombia. Charles Scribner's Sons. 12mo, pp. 279.

GENERAL MAURY'S 'Recollections' are even broader than his title-page indicates, for some of his pleasantest chapters, showing a natural gift for narrative, are those which tell of his boyhood and his education at West Point. The sketches of old Virginia plantation homes in the vicinity of Fredericksburg are admirably done, and make a valuable addition to our material for the social history of the South in ante bellum times.

He has drawn with delicate touch and genial spirit pen-portraits of comrades in the cadet corps who became historical characters afterwards—Grant, McClellan, Jackson, Bee, A. P. Hill, and others. The chapters on the Mexican war give greater fulness to these sketches, and bring vividly before us another score of brilliant young men who were to make their mark on their era—Lee, Johnston, Thomas, Beauregard, and Stuart among them. After peace was made with Mexico, some of these friends were united again on a tour of duty as instructors at West Point; and even later, when a dozen years of service on the frontier followed, familiar faces are constantly meeting us, as we follow the record of a soldier's career and learn from his sympathetic pen to make his friends our own, till the final explosion comes and secession drives this coterie of comrades into hostile camps.

The book is a pleasing one if we look at it simply as a narrative of the author's varied and adventurous experience; but it has a much higher and more permanent value in helping us to a personal acquaintance with a considerable group of men who made reputations on either side in the great civil war. To know them first as boys at school, and to see them develop into brave soldiers, daring Indian fighters, adventurous hunters of "big game," and finally into commanders of armies, is to give history a real life and power which the pages of the more systematic historian must lack, and which can be supplied only by personal narratives of the kind before us. General Maury's own part in the civil war was important, though he was not in the campaigns which most attract attention. His longest service was as commandant at Mobile, where no severe fighting occurred until the combined attack of Farragut's fleet and Gordon Granger's army. The only criticism a Northern man would be disposed to make upon the 'Recollections' is that the writer has been unable to speak as fairly and as kindly of the National soldiers who really hurt the Confederacy as of those who by their defeats seemed in 1862 to be preparing the way for permanent disunion. With this deduction from the judgment of men and events, there is little else to mar the pleasure and satisfaction with which we read this abundant repertory of piquant incident and lively characterization.

The closing chapters are devoted to incidents of life as minister at the capital of Colombia, and give many details of society and affairs in the South American republic, with some strong pictures of tropical scenery. The reader will find the interest of the book sustained to the end, and will be glad of the opportunity of sharing with Gen. Maury's children the memoirs which he wrote primarily for their gratification.

New Light from the Great Pyramid. By Albert Ross Parsons. New York: Metaphysical Publishing Co. 1893.

THE author's long, rambling preface conveying no clear promise of what this book is intended to contain, we turn to the first chapter for light. This opens with four pages of insignificant quotations from unimportant authors—unimportant, at least, in regard to the pyramid—followed by another page of texts from the Bible, such as the parable of the two houses and other passages equally far-fetched. Next comes a section headed "The Pyramid Explained by the Fall of Lucifer." Glad of something like a definite position, we ask how we are to be convinced that this is true. The author first cites Isaiah xix., 19, 20, which, after referring to Heliopolis, prophesies that an altar to Jehovah shall be set up in Egypt. Upon this the author argues as follows: The Hebrew word for altar (*mizebeha*) comes from the root of the Sanskrit *mri*, to die, and is identical with the second syllable of the word *pyramid*. The first syllable of this word, he avers, is the "Egyptian *pur*, fire." Hence, "a pyramid is an altar signifying death by fire." Now, Mr. Parsons informs us that one Wilson, in 1856, demonstrated that the pyramid interprets an ancient theory of gravitation applied to a body

falling from a planetary distance; wherefore he asks us to regard it as proved that the pyramid bears witness to the fall of Lucifer.

This is not convincing. The passage of Isaiah appears to have nothing to do with the pyramid. No evidence is adduced to show that the Hebrew word for altar has any connection with the Sanskrit verb to die; and all we know of the two languages renders this extremely improbable. No evidence is adduced to show that the middle syllable of "pyramid" has anything to do with either the Hebrew or the Sanskrit word. No evidence is adduced to show that the first syllable of "pyramid" means fire. It is true that it might mean fire in Greek, but of the etymology of the word we are quite ignorant.

In the next place, Mr. Parsons must not presume that the world will take his word for it that the writer Wilson proved in 1856 that the Great Pyramid interprets an ancient theory of gravitation. On the contrary, nigh thirty years having elapsed without any man of any character for learning having accepted Mr. Wilson's theory, the burden of proof is upon Mr. Parsons if he wishes to convince any judicious part of the public that that theory is true. *Prima facie*, it seems quite absurd. How could there be anything like a mathematical theory of gravitation in ancient times without its affecting ancient thought very powerfully? And what sort of reasoning can prove two propositions so strange as, first, that there was such a theory in such primitive times, and, second, that the great pyramid was built with reference to that theory?

But even if, for the sake of argument, we grant, first, that the word "pyramid" means altar of death by fire (in which case, it is not an Egyptian word at all), and also that the Great Pyramid was built to illustrate a theory of gravitation, there still yawns a chasm vast and deep between these premises and the conclusion that the Great Pyramid bears witness to the fall of Lucifer. The world will think that bad reasoning; and there is no use in bringing before the world an argument that nobody who wishes to preserve the reputation of a sane head will admit. The book contains about 400 pages, and seems to pile such arguments one upon the top of another to make such a Babel-tower as would not be secure even were every stage of it laid with the utmost caution and solidity.

A Short Account of England's Foreign Trade in the Nineteenth Century, its Economic and Social Results. By Arthur L. Bowley. London: Swan Sonnenschein & Co.; New York: Charles Scribner's Sons. 1893.

THIS is a small book for a great subject, but the treatment is upon the whole so able that the brevity of the book is a merit. Length is desirable only when it promotes clearness, and Mr. Bowley, although apparently a young writer, has learned to be clear and concise at the same time. His book is in the same line as the noted treatise of Mongredien, and might be taken as a continuation of it were it not for the somewhat singular fact that Mr. Bowley does not allude to his distinguished forerunner. It differs, however, in covering the later years of British trade, and especially in dealing with volume rather than value. The importance of this latter feature we shall devote our space to explaining.

During the century 1791-1891 the population of Great Britain and Ireland trebled; but the value of the exports and imports rose from £37,000,000 to £744,000,000. The great causes of this change were inventions, and the extension of the principle of division of labor through foreign trade. For Mr. Bowley clearly demonstrates that foreign trade exists only because of this principle, and that the prosperity of England is mainly due to legislation that has permitted her people to produce what they could most advantageously, by permitting them to exchange these products for such as other peoples had an advantage in producing. The full significance of the change, however, as we have intimated, requires us to consider the phenomena of price, for an increase in the money values of goods may or may not be coincident with an increase in their quantity. It is the latter circumstance that is of permanent importance, since there can be no question that he who gets more food and clothing for a less price is better off—quality being the same—than he who gets less of them for a greater price. Accordingly, Mr. Bowley resorts to the "index numbers" of Sauerbeck: "an imaginary budget is made out of a great variety of goods, wheat, cotton, wool, manufactures, tea, sugar, and so on. A definite quantity of each is taken in proportion to its importance; this budget is then valued at the prices current for each article for each different year. One date is taken as a standard, say when the budget comes to £100"; the year 1871 being selected by Mr. Bowley.

We must premise that the gravest errors are liable to occur in framing this imaginary budget; but, having given this warning, we shall assume that the method has sufficient scientific validity for the purposes for which our author employs it. It must be observed, too, that its validity is strikingly confirmed by the shipping statistics; the results from a computation of the volume of trade by index numbers showing a close parallelism with the tonnage of vessels cleared. Applying the method, Mr. Bowley finds that the date of Peel's first reforms is the date of the beginning of the fall of prices; the index number changing from 103 in 1840 to 75 in 1851—*i. e.*, £75 in 1851 went as far as £103 in 1840. From 1851 to about 1870 prices rose again, but since then there has been a gradual decline. Roughly speaking, from 1820 to 1851 prices fell 33 per cent., from 1851 to 1871 they rose 26 per cent., and from 1870 to 1890 they fell 30 per cent. Hence the trade of the period from 1850 to 1870 is commonly regarded as excellent, while since 1870 or thereabouts the complaints of depression have steadily grown louder. If we look at the values of exports and imports, the complaints seem justified. In 1873 these values amounted to £682,000,000. In 1888 they were again but £685,000,000, rising in 1890 to £748,000,000. But if we consider quantities, by employing the gold values of 1871, we find that the trade of 1873 would be reduced to £613,000,000, while that of 1888 would rise to £980,000,000, and that of 1890 to £1,070,000,000. Per head of population, this would mean a rise from £19 in 1873 to £28.5 in 1890. The wails of the bimetallists over the evil state of the world do not seem to require very serious consideration, in view of these facts. The more conservative of them say that we must rehabilitate silver because a tendency toward lower prices paralyzes industry. So far from being paralyzed, it appears to have increased 50 per cent. in 20 years, *i. e.*, every Englishman on the averages gets so much more from foreign countries and returns so much more to them. The tonnage figures tell the same story. In 1873 tonnage cleared at ports of the United Kingdom was 44,000,000; in 1890 it was 74,000,000. If we take Mr. Giffen's figures, including both internal and external trade, we find that between 1870 and 1890 incomes and wages rose nominally 40 per cent., while if reduced to the value which gold had in 1871, the rise would be 100 per cent. The average workingman could obtain with his wages in 1890 four times as much of the articles of common consumption as a man in a similar position obtained in 1820. While the increase of trade has not been so rapid in recent years as from 1840 to 1870, it would seem that the improvement in the condition of laborers has gone on at an even more rapid pace.

Space does not allow us to describe Mr. Bowley's other processes and results, or even to enumerate them. Suffice it to say that he examines the trade of Great Britain from many points of view, and in no instance that we have observed without unusual suggestiveness. It would not be easy to name any book that demonstrates more conclusively the case for free trade, although there is very little in it of what by the protectionists is called "theory."

The Ideal of Humanity, in Old Times and New. By John Stuart Blackie, Emeritus Professor of Greek in the University of Edinburgh. Fleming H. Revell Co.

PROF. BLACKIE has chosen an admirable title except that it does not indicate, nor even suggest, the heterogeneous contents of his book. The first chapter has for its subject "David, the King of Israel." It might have been written in the happy consulship of Plancus, before the beginning of the critics, for all the profit it has derived from them. Either Prof. Blackie has not read Prof. Cheyne's Bampton Lectures on the Psalms, or he has given them no heed. David is for him the traditional "sweet singer of Israel," and, whether or not "a man after God's own heart," one after the author's own. In that matter of Uriah he was a little crooked, to be sure; but then he may have argued thus and so. As for Renan's accusation—that he was always instigating others' wickedness and profiting by it while hypocritically condemning it and sacrificing the instruments of his perfidy—nothing is said about it. Yet it is extremely suggestive of what was actually the ideal of humanity in David's time and for some centuries after.

That Prof. Blackie's attainments are in Greek and not in Hebrew will lead the reader to expect something better in the second essay "On Christian Unity." But evidently a critical study of the New Testament has not been within his scope, seeing that he finds his ideal of Christian unity in the New Testament and the early church. Queerly enough, moreover, the Jewish Christians are treated as the heretics and schismatics, when, in fact, they were the orthodox party and Paul was the radical come-outer; his first canonical appearance being in the list of the heretical Marcion. The chapter entitled "Women" has an old-fashioned tone of patronage towards "the fair sex," also called "the weaker sex," "the dainty sex," and by other similar names. There is a laborious argument for women's speaking in church, notwithstanding the injunction of St. Paul, and they may be permitted to practise medicine and to write novels; but about woman in politics Prof. Blackie is not so sure. "It is a sphere from which the purer nature of the more moral sex may justly shrink." Still, if women wish to vote, "it is their business, not mine. If they will walk with silken shoes in dirty puddles, let them walk." In a chapter on the Epistle to the Romans this recreant Scot takes direct issue with the apostle in the mat-

ter of inherited sin. But he is such a good Scot for the most part that the wonder is that anything that his countrymen have believed should not be good enough for him. His provincialism is intense, but in all the essays except the last it is incidental; there it is warp and woof, the subject being "The Scotch Covenanters." This story is told with glowing sympathy, but one would never gather from it how much the new presbyter was like the old priest.

The Story of Louis XVII. of France. By Elizabeth E. Evans, author of 'The Story of Kaspar Hauser.' With five engraved plates. London: Swan Sonnenschein & Co. 1893.

DELUSIONS die hard. In this story of Mrs. Evans, one of them that long ago seemed "twice dead, plucked up by the roots," comes forth in newness of life. Its former recrudescences were several times plausibly explained by the aspects of the political horoscope of the Bourbons. On other occasions pretenders to Bourbon relationship found a notoriety—an easy life, and a luxury—which had before been beyond their dreams. They belonged to a class analogous to the Tichborne Claimant. They found a demand and they furnished a supply. *Populus vult decipi* is proverbial. They added, *et decipiatur*.

The story of the 'Lost Prince' as told by Hanson, the champion of Eleazar Williams, thirty years ago, Mrs. Evans condenses into about ninety pages. Most of her volume, however, is filled with proofs that the claims of rival pretenders are groundless, absurd, and ridiculous. Among these men who posed as princes—all of the Bourbon type, and three of whom were living in London at once—there were a tailor, cobbler, soldier, and clockmaker, and each bound, like the Turk, to bear no brother near the throne. All these competitors fell lower than Williams, for they died in jail, as many thought he ought to have done, but they all found more partisans than he, though his claim had something of social and pecuniary success, especially on our Atlantic shores among pious ladies who knew least of his real labors as an apostle among Western Indians. The two last pages in Mrs. Evans's book contain a list of authorities from which she formed her compilation. The truth is, that well-nigh all her evidence of Williams's royal relationship is traceable to the testimony of Williams himself. Of this sort is the affidavit of his mother that he was an adopted child; the assertions that money came for him in childhood from France, that a Frenchman in New Orleans declared he had himself stolen him away from the Temple, etc.

Nine years at a Massachusetts school unfitted Eleazar to be an Indian hunter, and roused his ambition to figure as an Indian chief. When he emerged into active life, Eastern Episcopalians wanted such a missionary as he seemed to be, to send among Indians, and readily appointed him. But a New York gang of land speculators coveted the land of the tribes near Oneida Lake where Williams had begun to work. They either originated, or efficiently aided, his project for inducing New York Indians to remove into the wilderness now Wisconsin. He went thither with a large colony in 1823. Other aborigines followed, and there was a disposition at Washington to form an enormous Indian reservation along the west shore of Lake Michigan, lest another free State might spring up there. Williams was the leading Indian orator of his time, and dreamed of sitting as the uncrowned king of a vast Indian league. Nor did he lose influence till he lost his reputation for honesty. The ignis-fatuus of Indian supremacy Williams persistently chased, and never without hope, nor was that fool's-fire extinguished till 1836. By that time, as described by one of his neighbors at Green Bay, which was from first to last his Western home, he had become a "disowned clergyman of the Episcopal Church, false in his pledges to the Indians, recreant to the United States Government," etc.

His eloquence still gave him favor with an Indian faction, his wife had brought him land, and he was himself master of more, as well as of lumber which he had acquired by questionable means. Still, at times he pawned many books which had been given at the East for his missionary library. Some of them lie on the table of the present writer. After alternate sojourns in the Oneida region and in Wisconsin, while voyaging westward in 1841 he fell in at Mackinaw with Prince de Joinville, who was making a tour on the track of early French explorers, and who, on the passage to Green Bay, was much interested in talking with Williams as a resident versed in their traditionary routes and adventures. The Prince, however, did not pass a single night at the Bay, but, after dinner, took horse up the Fox River by which Joliet had made his way to the Mississippi. He gave cordial thanks to Williams, asked further epistolary information, and even sent him some presents. But an iron pot, if taken off the fire with a silver hook, thinks itself silver. From this coming into momentary touch with royalty, Williams began to fancy, or pretend to fancy, that he was himself royal. The assertion, however, of a secret interview in which he was offered wealth *ad libitum* if he would renounce his claim to the throne of France, was not heard of for many a year. As soon as known, it was declared by the Prince to be totally a lie; nor has it any intrinsic probability. The pretence, it would seem, was first devised by Williams to thicken other proofs which did demonstrate thinly concerning the rôle of royalty he had resolved to play. He was not proof against temptations a thousand times weaker.

One authority omitted in Mrs. Evans's bibliography is the collections of the State Historical Society of Wisconsin. These volumes, evidently unknown to her, give Williams such a home endorsement as to prove that he was no Bourbon—save in dissimulation and duplicity, or, as the flock he had fleeced would say, "pure cussedness." The Dauphin was born in 1785, Williams seven years later—so he declared in his written application for admission to a Masonic lodge before his princely aspirations began and when a lie could not be lucrative. There are many collateral proofs that on this occasion he spoke the truth. Much of Mrs. Evans's book is filled with refutations of Naundorf's pretensions to dauphinship, and she says: "In reality, the whole case is disposed of in the fact that when Naundorf arrived in Berlin, he could neither speak nor read French" (p. 108). He cannot have been more ignorant of French than was Williams, who, according to many witnesses, and especially his own wife, who was a Frenchwoman, "could not speak a single word right." But he translated the Prayer Book into Mohawk very creditably.

Instead of being fair like a Bourbon, as Mrs. Evans remarks, Williams was taken at first sight for a half-breed by everybody acquainted with that race. The physician who inspected a scar in his side declared the color of his skin to be more that of an Indian than of a white man. His copper color increased greatly with his age. His ears, in the view of Indianologists, were a sure mark of aboriginal origin. Admitting some doubt about the significance of ear-marks, a man who served under Williams as a curate, and was a witness of his whole career, declares that the testimony of his *toes* proclaimed him indubitably an Indian: he toed in. "He always made [an effort to turn out his toes, but, forgetting it, he would, Indian-like, soon turn them in." Should Mrs. Evans visit the rooms of the Wisconsin Historical Society, she will be shown a trunkful of Williams's tell-tale manuscripts, every one of which he ought to have burned up before he started to play the rôle of a Lost Prince.

When tidings of Eleazar's imposture reached De Joinville, he pronounced it "a speculation upon the public credulity"—credulosity, one is inclined to say, since such speculations have been so successful. We meet with them in all ages. Without honor in his own country, Williams was elsewhere followed by such troops of friends that he could not fail to think himself a prophet. By often telling his story, he made such a sinner of his memory as to credit his own lie.

General Scott. By General Marcus J. Wright. [Great Commanders.] D. Appleton & Co. 12mo, pp. 350, with portrait and maps.

FOR writing the military life of Scott Gen. Wright has some peculiar qualifications. As a young soldier following his chief in the greatest of his military enterprises, the invasion of Mexico, he was a devoted subordinate on terms of personal intimacy with Scott. The greater part of the General's career is consequently told with the warm sympathy of a devoted friend and admirer, as it should be. But Gen. Wright has done still better. Although himself a Confederate in our civil war, he has handled the subject of Scott's consistent loyalty to the Union with an impartial fairness which leaves little to desire. No trace of prejudice or hint of the author's predilection is seen, and he has carried the story to the end with the same appreciative yet judicial spirit which marked the beginning. There was no room for any striking discovery of new facts, or surprises in new revelations of character, for Scott is among the best known of our worthies. The task was one of judicious compilation and wise condensation of authoritative material. The character delineated is a noble one, despite some blemishes due to amiable weaknesses, and the book is a convenient biography of one who has a sure place in the list of great soldiers.

BOOKS OF THE WEEK.

Adler, Hermann. Alternating Generations: A Biological Study of Oak Galls and Gall Flies. Oxford: Clarendon Press; New York: Macmillan. $3.25.
Andrews, Prof. E. B. Wealth and Moral Law. Hartford: Seminary Press. $1.
Austin, Alfred. The Garden that I Love. Macmillan. $2.50.
Ballioud-Mermet. Crazy Book-Collecting; or, Bibliomania. Duprat & Co.
Beers, H. A. A Suburban Pastoral, and Other Tales. Henry Holt & Co. 75 cents.
Blackmore, R. D. Perlycross. Harpers. $1.75.
Booth, Charles The Aged Poor in England and Wales: Condition. Macmillan.
Buchanan, T. B. Principles of Money and Coinage. Denver: Chamber of Commerce.
Carnegie, Douglas. Law and Theory in Chemistry. Longmans, Green & Co $1.50.
Carruth, Prof. W. H. Schiller's Wallenstein. Henry Holt & Co. $1.
Christy, Miller. The Voyages of Captain Luke Foxe of Hull and Captain Thomas James of Bristol in Search of a Northwest Passage. 2 vols. London: Hakluyt Society.
Cobbleigh, Tom. Young Sam and Sabina. Cassell. 50 cents.
Cole, G. A. J. The Gypsy Road: A Journey from Krakow to Coblentz. Macmillan.
Cotes, Mrs. Everard. A Daughter of To-Day. Appletons.

Cruickshank, A. H. The Bacchæ of Euripides. Introduction and Text. Oxford: Clarendon Press; New York: Macmillan. $1.
Curtis, G. W. From the Easy Chair. Third Series. Harpers. $1.
DeGraff, E. V. The School-Room Guide. Syracuse: C. W. Bardeen.
Dixon, Ella H. The Story of a Modern Woman. Cassell. $1.
Dodge, Rev. J. S. The Purpose of God. Boston: Universalist Publishing House.
Drummond, Prof. Henry. Lowell Lectures on the Ascent of Man. James Pott & Co. $2.
Fasnacht, G. E. Select Specimens of the Great French Writers in the 17th, 18th, and 19th Centuries. Macmillan. $1.75.
Fawcett, Edgar. Outrageous Fortune. Concord Press. 50 cents.
Finley, Martha. Mildred's New Daughter. Dodd, Mead & Co. $1.25.
Flagg, A. T. Primer of Navigation. Macmillan. 35 cents.
Fletcher, W. I. Public Libraries in America. Boston: Roberts Bros. $1.
Fosdick, Gertrude C. Out of Bohemia: A Story of Paris Student-Life. G. H. Richmond & Co.
Francis, M. E. The Story of Dan. Boston: Houghton, Mifflin & Co. $1.25.
Friedrich, Friedrich. The Workingman's Wife. Chicago: E. A. Weeks & Co. 25 cents.
Gardener, Helen H. An Unofficial Patriot. Boston: *Arena* Publishing Co.
Garland, Hamlin. Crumbling Idols. Boston: Copeland & Day. $1.25.
Gerard, Dorothea. The Rich Miss Riddell. Appletons. $1.
Gingell, Julia R. Aphorisms from the Writings of Herbert Spencer. Appletons.
Gower, F. L. Letters of Harriet Countess Granville 1810—1845. 2 vols. Longmans, Green & Co. $9.
Gray, Maxwell. The Last Sentence. Lovell, Coryell & Co. 50 cents.
Gregory, Caspar R. Novum Testamentum Graece ad Antiquissimos Testes denuo Recensuit. Pars ultima: Prolegomena. Leipzig: J. C. Hinrichs; New York: Westermann. $13.50.
Gummere, Prof. F. B. Old English Ballads [Athenæum Press Series.] Boston: Ginn & Co. $1.35.
Gunter, A. C. The King's Stockbroker. Home Publishing Co.
Harraden, Beatrice. In Varying Moods. Putnams. $1.
Hardinge, E. M. With the Wild Flowers. Baker & Taylor Co.
Hatfield, Prof. J. T. Freytag's Der Rittmeister von Alt-Rosen. Boston: D. C. Heath & Co. 75 cents.
Heywood, John. The Spider and the Flie. Manchester, Eng.: Printed for the Spencer Society.
Holcombe, Dr. W. H. The Truth about Homœopathy. Philadelphia: Boericke & Tafel. 25 cents.
Hole, James. National Railways. Cassell.
Hoppin, Prof. J. M. Sermons on Faith, Hope and Love, with Horæ Homileticæ. 2d ed., enlarged. Dodd, Mead & Co. $1.50.
Howells, W. D. A Likely Story: A Farce. Harpers. 50 cents.
Howells, W. D. A Traveller from Altruria. Harpers. $1 50.
Hubbard, Elbert. One Day: A Tale of the Prairies. Boston: *Arena* Publishing Co.
Hutchinson, Rev. H. N. Creatures of Other Days. Appletons. $3.
Hutton, R. H. Criticisms on Contemporary Thought and Thinkers. 2 vols. Macmillan. $3.
Johnson's Universal Cyclopædia. A New Edition. Vols. I.—IV. A. J. Johnson Co.; D. Appleton & Co.
Judaism at the World's Parliament of Religions. Cincinnati: Robert Clarke & Co. $2.50.
Kayserling, Dr. M. Christopher Columbus and the Participation of the Jews in the Spanish and Portuguese Discoveries. Longmans, Green & Co. $1.25.
Kipling, Rudyard. The Jungle Book. Century Co.
Lavedan, Henri. Le Lit. Paris: Lévy; New York: Charles Eitel.
Leclerc, Max. L'Education des Classes Moyennes et Dirigeants en Angleterre. Paris: A. Colin & Cie.
Lee-Warner, William. The Protected Princes of India. Macmillan. $3.
Lemaitre, Jules. Myrrha, Vierge et Martyre. 2d ed. Paris: Lecène, Oudin & Cie.; New York: Dyrsen & Pfeiffer.
Letters of Franz Liszt. 2 vols. Scribners. $6.
Lewis, H. C. Papers and Notes on the Glacial Geology of Great Britain and Ireland. Longmans, Green & Co. $7.
Loney, S. L. Plane Trigonometry. Part II. Cambridge: University Press; New York: Macmillan. $1.
Lounsbury, Prof. T. R. History of the English Language. Revised and enlarged ed. Henry Holt & Co. $1.12.
Lyall, Edna. Doreen: The Story of a Singer. Longmans, Green & Co. $1.50.
Maccunn, Prof. John. Ethics of Citizenship. Macmillan. $1.50.
Marshall, Prof. A. M. Biological Lectures and Addresses. London: David Nutt; New York: Macmillan. $2.
Masson, Frédéric. Napoléon chez lui. Paris: Dentu; New York: Dyrsen & Pfeiffer.
Masterman, J. A Devoted Couple. Harpers. 60 cents.
Matthews, Brander. This Picture and That: A Comedy. Harpers. 50 cents.
Maury, Gen. D. H. Recollections of a Virginian in the Mexican, Indian, and Civil Wars. Scribners. $1.50.
May, Rev. Joseph. Samuel Longfellow: Memoir and Letters; Essays and Sermons. 2 vols. Boston: Houghton, Mifflin & Co. Each $1.50.
Maxwell, W. H. First Book in English. American Book Co. 40 cents.
McLaughlin, Prof. E. T. Studies in Mediæval Life and Literature. Putnams. $1.25.
Meekins, L. R. The Robb's Island Wreck, and Other Stories. Cambridge: Stone & Kimball.
Merriman, H. S. With Edged Tools. Harpers. $1.25.
Michell, Horace. La Révolution oligarchique des Quatre Cents à Athènes et ses causes. Geneva: Georg & Cie.
Mitchell, D. G. Wet Days at Edgewood. Scribners. 75 cents.
Mitchell, L. E. Poems. Boston: Houghton, Mifflin & Co. $1.25.
Mombert, Rev. J. I. A Short History of the Crusades. Appletons.
Montagu, Prof. F. C. The Elements of English Constitutional History. Longmans, Green & Co.
Montbard, Georges. Among the Moors: Sketches of Oriental Life. London: Low, Marston & Co.; New York: Scribners. $3.50.
Morgan, Mrs. E. N. Though the Gods and the Years Relent. Home Book Co. 50 cents.
Nagel, Wilibald. Geschichte der Musik in England. 1st Teil. Strassburg: Karl J. Trübner.
Ogden, R. C. Samuel Chapman Armstrong: A Sketch. F. H. Revell Co. 35 cents.
Page, T. N. Pastime Stories. Harpers. $1.25.
Peirce, A. C. A Man from Corpus Christi. *Forest and Stream* Publishing Co.
Pfleiderer, Prof. Otto. Philosophy and Development of Religion. 2 vols. Edinburgh: W. Blackwood & Sons; New York: Putnams. $5.
Phillipps Wolley, Clive. Big Game Shooting. 2 vols. [Badminton Library.] London: Longmans, Green & Co.; Boston: Little, Brown & Co.
Rae, John. Eight Hours for Work. Macmillan. $1.25.
Rogers, A. K. The Life and Teachings of Jesus. Putnams. $1.75.
Schultz, Jeanne. Ce qu'Elles Peuvent. Paris: Lévy; New York: Charles Eitel.
Scott, D. H. An Introduction to Structural Botany (Flowering Plants). London: A. & C. Black; New York: Macmillan. $1.
Scott, Sir W. The Fortunes of Nigel. 2 vols. [International Edition.] Boston: Estes, Lauriat & Co.; New York: Bryan, Taylor & Co.
Scott, Sir W. Woodstock. [Dryburgh Edition.] Edinburgh: A. & C. Black; New York: Macmillan. $1.25.
Sebastian: A Dramatic Poem. Buffalo: C. W. Moulton.
Shoemaker M. M. The Kingdom of the "White Woman." Cincinnati: Robert Clarke & Co. $1.50.
Stevens, O. C. A Song of Companies, and Other Poems. Holyoke, Mass.: H. C. Cady Co. 50 cents.
Stokes, A. P. Joint-Metallism. Putnams. 75 cents.
Straus, Oscar S. Roger Williams: the Pioneer of Religious Liberty. Century Co.
Syle, L. Du P. From Milton to Tennyson: Masterpieces of English Poetry. Boston: Allyn & Bacon. $1.
The *Century*. Nov., '93—April, '94. Century Co.
The Prose Tales of Alexander Poushkin. London: George Bell & Sons; New York: Macmillan. $1.75.
The Story of My Dictatorship. Sterling Publishing Co. 30 cents.
Vacaresco, Hélène. The Bard of the Dimbovitza. Vol. II. London: Osgood, McIlvaine & Co.; New York: Scribners. $3.
Van Daell, C. L. A Preparatory German Reader for Beginners. Boston: Ginn & Co. 45 cents.
Vaughan, Rev. D. J. Questions of the Day. Macmillan. $1.50.
Vernon, W. W. Readings on the Inferno of Dante. 2 vols. Macmillan. $12.
Wagner, Charles. Courage. Dodd, Mead & Co. $1.25.
Ward, H. D. The White Crown, and Other Stories. Boston: Houghton, Mifflin & Co. $1.25.
Wright, C. H. Johnson's Gardener's Dictionary. New ed. London: George Bell & Sons; New York: Macmillan. $4.

"Every teacher of secondary schools, and every principal at least of elementary schools should take and read it."—*Supt. Chas. W. Cole, Albany, N. Y.*

JUNE

EDUCATIONAL REVIEW.

ARTICLES.—Public School Reform in New York, Stephen H. Olin; A School Journey, C. C. Van Liew; Latin in the High School, Francis W. Kelsey; History in Secondary Education, II., Ray G. Huling; "Phormio" at Harvard, Fred. G. Ireland; Graduate Work in the College, Jas. M. Taylor; Reports of the Committee of Ten, Julius Sachs.
DISCUSSIONS.—The Pueblo Plan of Individual Teaching, P. W. Search.
REVIEWS.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. E. Cornell Esten, Philadelphia, Pa., says: "I have met with the greatest and most satisfactory results in dyspepsia and general derangement of the cerebral and nervous systems, causing debility and exhaustion."

Descriptive Pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

PRIMITIVE MUSIC:

An Inquiry into the Origin and Development of Music, Songs, Instruments, Dances, and Pantomimes of Savage Races. By RICHARD WALLASCHEK. With Musical Examples. 8vo, $4.50.

"A most interesting and valuable book, dealing with the origin and development of music, a book that deserves to be carefully studied by all who are interested in musical matters. . . . The general reader will find the work a storehouse from which he will gather both amusement and profit."—*Leader, Boston.*

"A veritable storehouse of knowledge, none the less useful for being at times highly entertaining. . . . The book deserves to be quoted as a model. . . . Only the evidence of patient investigation and thought, put forward with the modesty that distinguishes the real man of science in search of truth rather than victory or fame. . . . A fascinating volume, . . . thought stimulating book."—*Musical Times.*

THE THEORY AND PRACTICE OF BANKING.

By HENRY DUNNING MACLEOD, M.A. Fifth Edition. 8vo, Vol. II., $5.00; Vol. I., $4.50.

Sold by booksellers. Sent, postpaid, by

LONGMANS, GREEN, & CO., 15 East 16th St., New York.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co, Successor, Baltimore, Md.

The Nation.

NEW YORK, THURSDAY, JUNE 7, 1894.

The Week.

TAKING up free silver to save protection, as the Republican Senators from New England and Pennsylvania now propose to do, ought to open eyes that have remained blind to all the other demonstrations of the reckless and unscrupulous nature of the protective system when driven into a corner. We have already had the pension squandering and corruption to avoid reducing tariff taxes; we have seen the sugar bounty and the silver purchases bartered for votes for protective duties; and now, it appears, we are about to see 100 per cent. protection joining fortunes with a fifty-cent dollar. On their part, Messrs. Lodge, Hoar, Gallinger, Reed, Cameron, and Quay have shown their hands, and Senator Pettigrew of South Dakota showed his in his speech of May 29. He laid down the platform upon which "we of the West" are standing. It is the platform of protection and free coinage of silver. "Upon this platform, and on this alone," said the South Dakota Senator, " we can continue to act with New England." And he added significantly: " I feel sure, from my conversation with New England's leading men, they are getting ready to join us." If this is not last-ditch protectionism, it is hard to say what would be. Our finances may be ruined and our currency debased and our commerce destroyed, but if protection can be " saved," all will be well. The virtuous New England Senators who are " getting ready " to go in for that, have no reason to assume a " holier-than-thou " air in the presence of Coxeyites.

An encouraging indication of the temper of the Democratic members of the House towards the Brice-Gorman tariff bill, similar to that already given by Mr. Wilson, appears in the letter which Congressman Tarsney of Indiana has addressed to Senator Faulkner. Mr. Tarsney says he declines to send to the Democratic newspapers in his district the Senate circular purporting to give a tabulated statement of comparative rates of the Wilson bill and the Brice-Gorman bill, because of its " misleading character "; and after exposing once more the cheap trickery behind that statement, he adds: " I think a less misleading, a more candid and fair statement to give out for publication would be that under the McKinley law the people are taxed annually $198,000,000; under the Senate bill it is proposed to tax them $175,000,000, and under the House bill $125,000,000—which shows a difference of something more than 1.27 per cent." Every additional Democratic protest of this kind will be of great public service in making possible the undoing of the Brice-Gorman work when the bill gets into conference committee. If the Democrats of the House will insist upon the passage of the bill substantially as it passed the House, they will have the support of the overwhelming majority of their own party, and of the country as well, for the Brice-Gorman business has no support anywhere outside high protection circles, and it will be extremely difficult for the Democrats of the Senate to stand by their bill if by so doing they defeat all action whatever.

To the vast majority of the women of America the cloak is an article of prime necessity as a protection against weather, the price of which they have to weigh with great anxiety. Its fashion and material constitute one of the few luxuries of the poor. One would think, therefore, that anybody raised above the savage state would try to make cloaks so cheap that every woman would find it easy to get a good one. The protectionist theory, however, as propounded by ex-President Harrison and the thoughtful Senator Lodge, is that it is bad for poor girls to have cheap cloaks, that it makes them feel cheap, and that the more of their scanty wages you take for a cloak, the better they are off. Accordingly some of the Cleveland tailors wrote to the Hon. Tom Johnson, begging him to make cloaks dearer by putting on them, besides the duty of 45 per cent. ad valorem, an additional specific duty of 49½ cents per pound, so as to make the poor sewing-girl, as he remarks, pay as much duty on her shoddy cloak as Mrs. Astor on her cloak of velvet, and drawing his attention to the horrible state of things in Berlin, where a poor woman can get a cloak for $1.20. The way the Hon. Tom takes up the cudgels for the poor women, and jumps on the greedy tailors, is delightful reading. If the poor of the country had many such champions in Congress, there would be much fewer Coxeyites and Populists, and far less marching on Washington.

Secretary Carlisle made short work on Thursday of the sensational story that he had called upon the Democratic members of the Senate finance committee with a sugar schedule which he insisted must be put into the pending tariff bill, because such terms had been promised the Sugar Trust in return for a liberal contribution to the Democratic campaign fund in 1892. He swore that he made no such statement, and he is a man whose word is to be believed. Moreover, it came out that, while he did present a draft of a proposed schedule in response to a suggestion from the Democratic members of the committee, this draft was not accepted. Instead of the schedule which is now in the bill being dictated by the Sugar Trust through the secretary of the treasury, as was charged, Mr. Carlisle presented no demand of the Trust, and his own recommendations were not adopted without change by the committee. There is thus nothing left of the original charge. As for the assumed impropriety of such recommendations by the head of the Treasury Department, only the most ignorant could be deceived by such a pretence. It has always been the practice for Senators and Representatives to invite his suggestions and welcome his advice as to the framing of a tariff bill. It is precisely because he is theoretically qualified to give advice and make suggestions of value when financial measures are under consideration by Congress, that a man is appointed secretary of the treasury. Under a better system he would probably draft all financial measures in the first instance.

The sensation-mongers are left in a most humiliating plight by the developments since the investigation began. When they printed their wild stories, they professed to be burning with impatience to be called before some tribunal and allowed to free their minds. " If the newspaper men are given a chance to tell all they know, there will be some interesting developments," one of them wrote to his newspaper. But when he got the chance, he was unwilling to tell anything which would be of service to the investigators, and took refuge in the plea of " professional honor." The incident illustrates the growing sense of irresponsibility among writers for the press. Here is a case where a man whose personal integrity has never been impugned was charged with the baseness of acting as go-between in a bargain between men seeking legislation in their own interests and the Senators in charge of a bill affecting those interests, and telling his fellow-partisans that they must make such and such a schedule in return for so much cash paid into the party treasury. There proves to be not a word of truth in it. But the man who wrote the story will not tell where he got it, and many newspapers profess to regard it as entirely proper for a writer to make such a charge, and then take refuge in the plea that he cannot expose the liar because it would be " a breach of professional confidence." This seems an odd way of fulfilling " the mission of the press."

The Hawaiian incident may probably be considered as closed with the all but unanimous adoption by the Senate on Thursday of a resolution declaring that the people of the Hawaiian Islands ought to establish and maintain their own form of government, that the United States ought not to interfere, and that the intervention of any other government would be regarded as unfriendly to this country. If such a resolution had only been adopted two years ago, and the Harrison administration had lived up to it, we should have been spared the humiliating history of the attempt to rush through an annexation scheme which was not favored by the people either of the Hawaiian Islands or of the United States. This country had a narrow escape from having these islands made part of the United States before people generally knew what was going on, and it did not escape the reproach of having interfered unjustifiably in the affairs of a Power with which it was at peace and of having overthrown the existing government. The best we can do now is to resolve that this sort of thing shall not happen again.

The payment by James Gordon Bennett of over $6,000 damages the other day to Miss Kinney, a country clergyman's daughter, about whom the *Herald* printed an atrocious libel, and who sued it in the United States Court, throws light on several things. The libel was a brutal attack on Miss Kinney's character, telegraphed from the country by some malicious person and printed without the least inquiry. When called on to retract, the *Herald* retracted by repeating the libel, with the word "not" inserted—that is, by saying that Miss Kinney did not do so and so, thus clearly aggravating the original offence. Now this case, taken in connection with Mr. Van Ingen's suits against the *Mail and Express* and the *Recorder*, shows clearly that if libels are not punished or repressed, it is the fault of the public. Fourteen thousand dollars were recovered last year for one scandal from three other city newspapers. It is quite plain that anybody who suffers from a scandalous press has only to go into court to get satisfaction, for the juries are most sympathetic. Nearly every juryman has suffered, or has friends who have suffered, from blackguard "journalism," and is ready in a good case to make the offender smart. This Kinney suit shows also why the *Herald* was so eager last winter for a change in the law which should compel libelled people to prove malice in order to recover damages. Miss Kinney, of course, could not prove malice; nobody can prove malice—it is unprovable; it has to be a legal presumption. Miss Kinney has also sued the *Police Gazette*, but she cannot lay hold of a tithe of the scandal-mongers all over the country who circulated the libel. But these suits are full of hope and encouragement for a long-suffering people.

The attempt of the relatives of the Italians who were killed in New Orleans in the assault in the parish prison in 1891, to recover damages for their death, has been finally defeated in the Circuit Court of Appeals. The opinion of the court was delivered by Judge Pardee, the other two judges concurring. The damages were laid at $30,000. The court decided that, under the treaty of 1871 with Italy, Italians resident in this country are entitled to exactly the same sort of legal protection as citizens, and no more; that there is no common-law right to sue a State or city for damages for the loss of either life or property through riots; that for such a right to exist it must be created by statute; that a statute makes the city of New Orleans liable for damage done by mobs to property, but makes no mention of municipal liability for the loss of life; that, therefore, this liability does not exist, and, horrible as the crime was, there is no remedy for it in a civil action. This justifies Mr. Blaine's position when the offence occurred—that the Italians in New Orleans were entitled to all the legal protection due to citizens, but no more, and therefore could not properly invoke federal interference in their behalf—a position which we then maintained was impregnable. It is, however, a position which doubtless makes the rôle of the United States a very embarrassing one when foreigners are the victims of violence punishable only by State law. If the State does not punish it, the United States can really do nothing for the injured persons beyond giving them a solatium in money, which is a great discredit to the country. We believe it has been held that Congress has power to take cognizance of such offences, and if it has, it ought to provide for its exercise by legislation. Our States are at present the only civilized communities in the world which can deny protection to the life and property of foreigners with perfect impunity, for the United States protects them from chastisement.

The boldest and most jocose exercise of judicial authority probably ever made was the injunction forbidding the Constitutional Convention to pass on the qualifications of its own members. Judge Clute's injunction forbidding the clerk of the State Senate to call the roll was a trifle compared to it. If it were good law, it would authorize any one of our forty-six judges of the Supreme Court to arrest the proceedings of the highest sort of assembly known to civilized man for an indefinite period. The case would, of course, be different if a legislator's title to his seat were now subject to judicial decision, as in England. But no such practice is known in the United States. In both Congress and the State legislatures the members whose seats are not contested decide without appeal on the claims of those whose seats are contested. If the Constitutional Convention were subject to a different rule, it would really place it lower than the bodies which it creates and whose action it controls. The committee disposed of the injunction in a very calm and dignified way, by deciding to take no notice of it; but the issue of such writs always helps to bring the courts into a contempt which cannot be punished. It makes a judge talked of, but does not add to his fame.

There is no doubt whatever that the testimony which Mr. Goff is bringing out through the Senate investigating committee is making a profound impression upon the public. Neither is there any doubt that it is very generally accepted as truthful. That it will be met with denials by most of the persons implicated is expected, but in their denials the police officials will suffer under the disadvantage of popular distrust of many years' standing. That blackmail has been levied upon both crime and liquor in this city for many years is a matter of general belief, and the evidence that it is levied is taken as a matter of course and accepted on its face as truthful. That adduced on Monday, like what preceded it on Friday, bears many marks of truthfulness, and is supported by corroborative evidence which sustains its general character. It is noticeable that all the witnesses testify to a uniform rate of taxation—$500 as an "initiation fee," and $50 a month as regular tariff, with something thrown in for the "ward man." The ward man, it should be borne in mind, is the ward detective who is supposed to be giving the police the most expert kind of aid in ferreting out crime. That he should be used so uniformly as the collector of blackmail, gives us a startling picture of the demoralization which the business has caused in the force.

Forty years ago, Bastiat propounded the thesis that a classical education at a French college predisposed a man to socialism; and as a matter of fact the leaders in the socialistic movement in France, and in the Paris Commune, have been largely college graduates who had failed in life. M. Léon Say took the matter up at a recent meeting of the Political Economy Society in Paris, and seemed to agree with Bastiat; and to the influence of the universities in making socialists he added that of the Germans. While the Germans

were absorbed in philosophy, they made no progress, and as soon as they dropped philosophy and took to arms they founded the empire and conquered France. The French then thought it was the philosophy which had beaten them, and, since the war, have taken it up. M. Léon Say would, therefore, suppress the "baccalauréat"—the A. B. degree—and reform the philosophic instruction in the university. He would banish from the French horizon "the love of mystic poetry which is now all the rage, and which, by a natural reaction against vulgar and unclean realism, is more and more laying hold of the minds of the young men." "To give things their real value, and see them exactly as they are, is," he said, "the highest duty of citizenship." "But how," he asked, "can we hope that the love of reality and contempt for chimeras will penetrate young minds if philosophers continue to nourish them with metaphysical illusions, by fixing their view obstinately on ideal states of society as far as possible removed from this earth? Is it not sad to think that it is now the fashion to confide chairs of political economy to metaphysicians, with the view, doubtless laudable, of having them learn political economy by teaching it? Political economy is the servant of philosophy, perhaps because common sense ought to be the servant of mystical speculation."

We happen to have lying before us, as we read these observations of M. Léon Say, a striking illustration of the way in which metaphysics creeps into political economy, in the shape of a paper, on the "Austrian Theory of Value," by our excellent friend Prof. Macvane of Harvard. Economically and humanly speaking, cost is what a man pays for a thing when he buys it. To the manufacturer of the finished article, the cost is what he has paid for his raw materials and the labor he has employed. On this he bases his profit. This is as far as an economist can or ought to go. Common sense stops him "right here," as the orators say. But here the metaphysician arrives on the scene and says: "This is only the employer's way of looking at the matter." "The economic view of cost" "must take the broadly human point of view, by ignoring the division of men into employers and laborers, and making cost of production a question of the whole exertion or sacrifice men have to undergo in order to produce the various commodities they need." With this Prof. Macvane tackles the "Austrian School," and he and Prof. Boehm-Bawerk and Prof. von Wieser have a lively tussle over the nature and extent of "this exertion or sacrifice," about which, of course, one knows just as much as the other, and about which none of them can offer anything but a speculative opinion. Hearing the noise, Marx, Bebel, Guesde, and Jaurès and the Fabians, arrive promptly on the scene, followed by Vaillant and Henry, and shout, "What is this we hear about 'the broadly human point of view' and 'exertion and sacrifice'? That is our affair; we know all about that; what can *you* know, black-coated *canaille*? What you need is a good bomb under your chair."

Every French ministry that comes in pours a little oil on the socialistic flame. M. Dupuy's exposition of his policy has the usual vague and most mischievous promise "to push forward democratic measures, and especially to give attention to the bills before the committees relating to social problems and workingmen's pensions, with the object of improving the condition of workingmen in town and country." We need hardly say that this is pure buncombe. There are no measures before the committees for the permanent improvement of the workingmen either in town or in country. They are all measures intended either to induce the workingmen to work less, and so diminish production, or to give them money out of the taxes paid in part by their own earnings. M. Dupuy's observation that "workingmen have no need to resort to revolution to improve their lot" will undoubtedly be taken by them to mean that their objects would justify revolution if legislation was not to be had. We do not need now to say that this sort of talk by men in power in all the leading countries of the world has at last begun to alarm capitalists, and is undoubtedly having its effect in delaying the revival of business. The socialistic leanings of the Liberal party in England have been sensibly felt in "the City," and there is no good ground for supposing that the Tories would be much safer, and the effect of "social reforms" on French finances is becoming increasingly threatening.

The *concours* by means of which it was hoped that a new and better series of postage-stamps might be obtained for France has just ended in complete failure. Something like 500 designs were sent in, none of which was good enough to be of use. Half-a-dozen were passable, others were caricatures, others still unintentionally absurd and grotesque; but the mass was simply ugly and stupid. Allegorical figures, of course, abounded, and the unhappy republic was served up *à toutes sauces*. Phrygian caps, Revolutionary cocked-hats, cockades, fasces, Gallic cocks, lions, and all the rest of the symbolic menagerie, swarmed. Realism had its triumphs, too: Gen. Hoche shook hands with Joan of Arc over the map of France; M. Carnot, with his habitual "war paint" on, stood with his hand on the shoulder of a young woman of very agreeable appearance, who sat at a table on which there was a telegraphic apparatus. The tricolor waved over them. As was natural and proper, the jury rejected the whole of the designs, though awarding gratuities of consolation to four or five of the competitors. Why such a competition as this should be thought more democratic than the obvious and sensible plan of giving a commission to a competent artist, it would be hard to say. There would seem to be no more danger of favoritism or of jobbing in one case than in the other. France has designers and medallists equal to any in the world. A stamp designed by Chaplain or by Roty, men who are first in their art, could not lack distinction. But prejudice in France still calls for competitions, as if the republic were somehow made safer by them, even at the expense of becoming in some ways uglier and less artistic; for a choice where, as in France, the best men will not compete, is certain to be a choice among mediocrities.

It is extremely fortunate that the mutual relations of the great Powers of Europe are to-day as nearly cordial as they have been for many years, for the state of the Balkan peninsula is more than ever threatening to the peace of the world. If Rumania and Montenegro are quiet enough for the moment, and Greece too busy with bankruptcy and earthquakes to give her whole restless attention to foreign affairs, Servia and Bulgaria are in a very dangerous condition. In Servia the King is a boy; ex-King Milan—who has unlimited capacity to make mischief—has returned, regardless of the law and his own solemn promises; real or pretended conspiracies have been discovered; the Constitution has been abolished, and father and son are busy trying to govern the kingdom in defiance of the wishes of the overwhelming majority of the people. In Bulgaria there have long been indications of trouble between Mr. Stambuloff, the virtual dictator since 1886, and the prince he has created. Stambuloff has been dismissed, but he is able, powerful, and unscrupulous, not at all the man to yield without a struggle of some kind. Already there has been serious rioting in Sofia. Any day may witness the outbreak of a revolution in either country, followed by civil war, the danger of foreign intervention and of the reopening of the whole Eastern Question. Almost the only reassuring element in the situation is the fact that the feeling between Vienna and St. Petersburg has been better of late, and that both governments are sufficiently anxious to avoid a general war to be cautious about doing anything which might provoke it.

THE NEW SILVER MOVEMENT.

THE disgust with tariff tinkering which is spreading among the people of both parties throughout the country, and the plain demonstration which the events of the last four years have now afforded that tariff-making is something which must in the long run ruin any democratic government by corrupting the Legislature, have apparently convinced some of the Republican managers that they must have a new issue in the next canvass. They have accordingly fixed on silver as their particular vanity, and have managed quite ingeniously to couple with it that odious power, the Kingdom of Great Britain and Ireland. Mr. Lodge was put up to start the movement in the Senate. He perceived the enormous importance to commercial nations of more money—that is, of more silver—and then he asked himself, Who is it that hinders mankind from having as much silver money as it pleases? Why, England, of course, by adhering to the gold standard. Now, why does England adhere to the gold standard? If she adhered to it from philanthropic motives or desire to benefit the human race, Mr. Lodge would forgive her. He believes in sentimental money. But he found out that she adheres to it through pure selfishness, from a desire to benefit herself and make money in commercial operations. The effect of such a discovery on a nature like Mr. Lodge's may be readily imagined. He determined to "go for" England and compel her, by discriminating duties on her imports, to change her standard, to give ear to the bitter cry of the Coxeyites, and adopt a humane silver or bimetallic system.

The appearance of Mr. Lodge with this scheme in the Senate did not attract much attention, as he has for some time been working hard for popularity by any tools that come to hand. He is, in fact, a Presidential candidate in the very earliest stage, who has been much impressed by the large number of persons who are laboring under the silver hallucination, and, therefore, is perfectly overpowered by the weight of the silver arguments and the wickedness of gold-standard nations. But he has now been reinforced by Mr. Thomas B. Reed of Maine, who is also a Presidential candidate, but a very much weightier person than Mr. Lodge, and very much nearer to a nomination. Mr. Reed has been interviewed, and says he is of the same mind as Mr. Lodge. His attention too has been called to the sufferings of the world from want of more silver, and to the large exporting powers of the silver nations, like India, who are now competing with the United States. What is the remedy for this? Why, a union of the Latin nations to coerce England and Germany, by means of high discriminating tariffs, to change their standard. This will doubtless be the programme of the party in the next canvass, particularly if, after the passage of the Wilson bill, there should be two years of revived industry and prosperity.

The scheme is not worth discussing as a practical plan of legislation, any more than the fox's plan of having all his fellows cut off their tails after he had lost his own. Of course, in international trade, if you will not buy, you cannot sell, and we cannot discriminate against any European Power which would care about our discrimination, without cutting off our own trade. The largest market for our farm produce, in fact we might say the only one, is England, and a proposal to discriminate against her specially, together with Germany, savors of the kindergarten. Mr. Lodge's idea that by forcing England to retaliate he would blow "the free-trade system" to atoms, will only lead English business men to ask what his age is.

But, from the point of view of home politics, Mr. Reed's adhesion to the plan is one of the most encouraging of recent signs of the times. It shows pretty clearly that the Republican candidates—if not the Republican managers—consider the tariff, as a plan for raising the wages of American workmen, to have had its day. The workmen, to use the slang phrase, "have got on to it," and in so far as they desire the Government to raise their wages at all, desire it to be done by some sort of direct gift or subsidy or distribution, such as the Coxeyites ask for—that is, either the employment of labor by the Government, or a great issue of cheap money, either silver or paper. They are not willing any longer to have the bounty come through the manufacturers. Reed and Lodge have caught the idea. If they are to advocate a high tariff again at all, it will not be with the view of enabling the employers to pay better wages, but with the view of punishing England in the interest of "cheap money for the poor man."

The drift of public sentiment towards free trade, too, will, we think, be hastened by the blundering way in which the Senate has managed the Wilson bill. What the country sees clearly is that this remarkable display of corruption and incapacity has been called forth in the interest not of free trade, but of protection, and that, in short, it is almost hopeless, when once a high tariff has been put in operation, to look for real reduction or reform from any legislature. The influence of a high tariff on all legislatures is in the highest degree corrupting. Huge pecuniary interests grow up behind it, which are sure to defend themselves by every means in their power against legislative interference, and the readiest means is, of course, the seduction of the legislators. So that, as we see in the case of the Wilson bill, no matter what the people may vote for at the polls, if you give the beneficiaries of the tariff time to "see" the lawmakers and work upon them, there will be no change, or as little change as possible.

Against this influence the reformers have no means of defence. As a rule the pecuniary interest of free-traders in the tariff is small. With them the tariff is not "business." They therefore have nothing to oppose to the protectionist corruption but argument, and to argument the reply of the Gormans and Brices of course is that, "thanks be to God, they are not open to conviction." We predicted most of what has happened in a passage which we printed immediately after Mr. Cleveland's election, when urging him to call Congress together while the members were fresh from the polls and still felt strongly the reform impulse. More and more, therefore, every year, those who care for the future of democratic government will fight for its deliverance from the curse and snare of protective tariffs, and for the total withdrawal of the legal-tender quality from money. Legal tender is now, as it was when first invented, a means of keeping adulterated money in circulation, or, in other words, of cheating the poor and unwary. It puts the property and business of the community at the mercy of ignorance and fraud; and those who want to "see the government of the people, by the people, for the people," perpetuated, will try to confine taxation to the needs of revenue, and coinage to stamping and weighing.

SEPARATE CITY ELECTIONS.

WE are glad to see that the first subject to engage the attention of the Constitutional Convention's committee on cities is the proposition for an amendment so extending the terms of elective officials that national, State, and municipal elections can all be held in different years. This proposition is not a new one in this State. It was put forward first by the Constitutional Club of Brooklyn in 1885, and was submitted to the Legislature in the spring of that year. Its form to-day is precisely what it was then, though during its repeated submission to one Legislature after another it has undergone some temporary modifications. What it proposes is to lengthen the term of Governor and all minor State officials to a uniform period of four years. At present the Governor's term is three years, and that of minor State officials two years. It proposes, furthermore, to extend the term of Senators from two years to four, and the term of Assemblymen from one year to two, and to provide for biennial sessions of the Legislature.

With this arrangement of terms, the election of Governor, State officers, and State Senators could be placed midway between the elections for President—that is, every four years, beginning with 1894. This would bring every State elec-

tion no nearer any Presidential election than two years, and the pestiferous influence of national politics, in the form of appeals to carry the election on national issues for the "moral" effect of the result upon a close-following national election, would be eliminated. The only State candidates who would have to be voted for in Presidential years would be members of the Assembly. The odd years between national and State elections could thus be reserved entirely for municipal elections, without either a national or a State candidate or issue to confuse or complicate them. Thus we should, under this division, elect a Governor, minor State officers, a State Senate and Assembly at one time. In the following year we should have a municipal election, with nothing except municipal candidates and issues before the voters. In the next following autumn we should have a Presidential election, with no State or local candidates, except members of the Assembly, to complicate, or serve as bases for trades and deals. The great advantages of this absolute separation are too obvious to be dwelt upon. The argument which has been raised so often against spring municipal elections, that the voters will not take interest in them, cannot be advanced against this plan, for the municipal elections will be held on the regular November date—that is, at the time to which the voters have become accustomed.

Heretofore more objection has been raised against the biennial-session part of the proposition than to any other, though there has been some raised also against the lengthening of official terms. So far as the biennial sessions are concerned, it is sufficient to say that all except six of the forty-four States have adopted the plan, and in none of them is there a serious movement in favor of returning to annual sessions. Maine adopted biennial sessions in 1880, and in 1888 the people rejected a proposition to restore annual sessions by a vote of 39,320 to 5,776. In two States, Georgia and Ohio, the law is evaded by the politicians, who, under plea of an adjourned session, manage to hold annual sessions, but the popular objection to this evasion, especially in Ohio, is so strong that the practice is not likely to continue. The six States which adhere to annual sessions are Massachusetts, Montana, New Jersey, New York, Rhode Island, and South Carolina. It would be difficult to show that any one of these is better off because of its annual sessions than the other forty-four States are with only half as many. So far as New York is concerned, we are convinced that if the people were given a chance to say whether or not they would cut down their supply of legislation one-half, they would answer in overwhelming numbers in favor of the reduction.

That four years is not regarded as too long a term for State officials is shown by the fact that nineteen States, nearly half the whole number, have that term now and do not find it in any way objectionable. In New York the gain of having our State elections turn on State issues alone would be so great that any disadvantage which might follow from the addition of one year to the Governor's term and the doubling of the terms of the minor State officials would be trifling in comparison. It is impossible to find any arguments in support of our present method of shorter terms for the minor offices than for Governor. The chief result of this arrangement is to keep our State elections dribbling along through other elections, complicating the whole of them with issues which distract the voters' attention and do no one except the machine politicians any good.

That separate elections are of great value in municipal affairs has been shown conclusively by the experience of Boston and other New England cities. In Massachusetts the elections in many cities are held about a month after the regular November elections. It has happened repeatedly that cities which have been carried by one party in the November elections on State or national issues, have turned about, a month later, and elected mayors of the opposite political faith on local issues alone. In one year, 1890, no less than six cities which had given Democratic majorities in November, elected Republican mayors in December, and six which had given Republican majorities in November, elected Democratic mayors in December. In all these cases the best men won without regard to their party names. In Boston there has been a Democratic majority given in every November election since 1880, but during the fourteen years between that time and the present the Republicans have four times elected a mayor in December, winning each of the four times because of the superior character of their nominee. The Democratic pluralities in November have ranged from 4,000 to 13,000, but have fallen in the four November defeats to a minority ranging from 700 to 5,460. The most complete reverse of all was in 1889, when the Democrats carried the city by 5,654 plurality in November, and lost it by 5,640 plurality in December. That the interest in municipal elections has been little less than that aroused in other elections is shown by the fact that the average falling-off in the December vote from the November vote was during ten years less than 2,500.

Similar results have been shown in the separate elections which are held in other New England cities and in Philadelphia. There is, it should be remembered, much more interest in municipal matters everywhere now than there was a few years ago. The one thing necessary to stimulate that interest and concentrate it upon the sole issue of good government is to eliminate all other questions from the municipal elections. Let the voters be called upon to decide between the capabilities of candidates to pave, police, light, drain, and rule the city, without regard to their views on the tariff, or pensions, or Hawaii, or silver, or the income tax, and we shall then be able to get a verdict in accordance with common sense and the rudimentary principles of good government.

THE PANIC AND POOR-RELIEF.

THE past winter, with its unusual demands on charity, furnished also unusual opportunities for the study of methods and results in the administration of charity. Several valuable reports from different cities have fallen under our notice, and it is instructive to group some of their conclusions.

One of them comes from New Haven, being tabulations relating to destitution and its relief in that city published in the last two numbers of the *Yale Review*. The particular aim was to show how greatly the distress and helplessness of the unemployed in New Haven had been exaggerated. Their numbers were put at 5,000 (out of a population of 81,000) by many "competent observers," including the mayor of the city, yet a police census, taken with characteristic looseness, found a total of only 2,886. These figures, of course, cover those who were usually idle in winter as well as those thrown out of employment by the hard times. On the other hand, the police may have overlooked some names that should have been recorded. But it is evident that the popular impression of the amount of destitution through lack of work erred seriously on the side of exaggeration.

This becomes still more clear when the demands made upon the organizations for poor-relief are studied in detail. The New Haven Organized Charities handled nearly all the money raised for aiding the unemployed, and from the records kept by that society an accurate comparison can be made with foregoing years. Comparing in this way the three months from last November to January, inclusive, with the corresponding period of the preceding year, it appears that there were 299 more cases of resident applicants for help, but 2,192 more of non-resident—in other words, of tramps. Taking the first quarter of this year, compared with the first three months of 1893, we find that there were 175 more cases of residents and 2,607 more of tramps. There was thus a positive falling off in resident destitution, though an increase in tramps. In New Haven, accordingly, the main question seems to come down to the inquiry why the city is so peculiarly attractive to tramps. The *Review* statistics handle admirably the returns from

savings banks, by the test of which it appears that the poorer classes had resources of their own to fall back upon in an emergency, and also that times were actually better in New Haven in the first quarter of 1894 than in the same part of 1893.

Baltimore's experience last winter in banishing tramps and helping the unemployed is set forth in the last *Forum* by Mr. E. R. L. Gould. The main feature of the scheme devised by the city authorities in coöperation with the Citizens' Relief Committee, was the application of the "work test." It had its usual fatal results upon the tramp population, cutting down the lodgers at the police stations from 320 on January 1 to 200 on the 16th, to 80 on the 28th, and to zero on February 3. Work furnished the unemployed was undertaken on "economic principles"—that is, market rates were paid for raw material and demanded for the finished product, and the market rate for wages was paid as nearly as possible. Mr. Gould's conclusion from the whole experiment is:

"No new sociological principles may be derived from Baltimore's experiments, but highly satisfactory sociological results have been accomplished. The potency of the work test in relieving a community of most of its vagrants and tramps has been once more established, and the feasibility of providing industrial work for relief purposes on a fairly large scale has been successfully demonstrated. Let us hope that these may soon avail against repetition of ill-advised schemes emanating from unwise philanthropists, interested politicians, or socialistic dreamers."

Of extraordinary interest is the report of a "special committee on public poor-relief" in Waterbury, Conn. That there was need of investigation was evident from the way the amounts expended in public alms had been increasing. During the past twenty-five years the taxable property has increased 56 per cent., the population 176 per cent., but the pauper expenditures 462 per cent. The amount paid out for poor-relief last year (exclusive of the sums expended on hospitals) was $38,452, or 88 cents per capita. This is among the highest per capita taxes for relief of the poor paid by any of the Connecticut cities; and Connecticut, as Prof. McCook has demonstrated, "leads the world in its dispensation of public alms."

The committee was not long in finding that the great leak came in the abuses, so often exposed but so hard to abandon, of out-door relief. Some of the cases taken from the selectmen's books are simply astounding. A man convicted on December 4 of keeping a house of ill fame had got groceries and fuel from the city authorities only three days before. One family had been enjoying public relief for eight years consecutively, and in that time the husband had been arrested once for non-support, five times for breach of the peace, and twelve times for drunkenness. One woman who had received outdoor relief for seven years, and who was helped to the extent of $58.50 in 1893, has the following police record: "Arrested in August, 1892, for drunkenness; arrested in February, 1893, for keeping a house of ill-fame; arrested in November, 1893, for drunkenness." So overwhelming was the evidence collected by the committee of the "vast amount of hereditary and chronic pauperism" directly caused by the unwise methods of poor-relief so long in vogue, that a special town-meeting, called to consider the report, passed resolutions which will lead to an immediate reform of the worst features of the system, and ultimately to its total abolition.

THE LATE G. J. ROMANES.

OXFORD, May 26, 1894.

GEORGE JOHN ROMANES, F.R.S., died at Oxford very suddenly, though after an illness of intermittent severity which had lasted more than two years, on Wednesday, May 23. His achievements in science would doubtless have created more stir if he had not possessed that unusual fairness of spirit and openness of mind which made it constitutionally impossible for him to advocate pronounced and uncompromising views. The ripeness of judgment and breadth of view which characterized the later years of his vigor would, however, have been sure to culminate in the very highest sort of original work had not his failing health come in as an impediment and finally cut him off in his forty-sixth year.

He was born in 1848 at Kingston, Canada, where his father had established himself, having been sent out by Dr. Chalmers as a sort of Presbyterian bishop charged with the general organization of the Church in Canada. The name Romanes is not uncommon in Scotland, and it was in the north of Scotland that Mr. G. J. Romanes spent the summers of many active years of his manhood. At his place in Rossshire he went into the careful study of material drawn from the ocean at his doors —jelly-fish, star-fish, and sea-urchins. His education was not in any of the English public schools, but came from private tuition given him in London and on the Continent; as a boy he spent some years in Spain, for instance. He was graduated with honors in science at Gonville and Caius College, which he left in 1870, and of which he was afterwards made an honorary fellow. Having come to Cambridge with no pronounced tastes, and with the prospect of following out some one of the more usual courses of study there pursued, he was strongly and permanently attached to scientific work by Prof. Michael Foster, then prelector at Trinity. Upon leaving Cambridge he continued his studies at University College, under the auspices of Prof. Burdon-Sanderson, through whom he made the acquaintance of the great Charles Darwin. Darwin's attention having already been attracted by contributions which Romanes had made to *Nature*, the acquaintance, which began in 1874, soon ripened into an unusually strong friendship, and culminated during the later years of Darwin's life in the closest intimacy. These circumstances, combined with the previous bent of his mind and his special studies, made Mr. Romanes one of the most representative successors of Darwin. The very fact that he maintained an independent initiative, and could not insist upon the letter of the Darwinian law enough to meet the views of all Darwinists, constitutes his best title as Darwin's representative. A recognition of this among other things may be found in his election as a fellow of the Royal Society in 1879.

His investigations were by no means confined to observations and experiments upon the lower forms of sea-life, but they concerned also the signs and symptoms of mental evolution among animals in general. Indeed, his experiments and recorded observations in the case of a monkey in the Zoölogical Gardens attracted much attention, the more so because they appeared in a volume, published in 1883, containing a hitherto unpublished essay upon instinct by Charles Darwin himself. In the year 1885, Lord Rosebery founded a professorship at Edinburgh for the special behoof of Mr. Romanes, who delivered there his lectures on the 'Philosophy of Natural History.' The same matter, or practically the same, was incorporated in the more extensive course which Mr. Romanes gave when appointed, in 1888, Fullerian Professor of Physiology at the Royal Institution in London. These lectures were published under the title of 'Before and After Darwin,' and should be distinguished at least chronologically from Mr. Romanes's 'Darwin and After Darwin,' published in 1892. His agreement with his master did not prevent his dwelling in these lectures and publications upon points in organic evolution which could not, in his opinion, be cleared up satisfactorily by Darwinism pure and simple. How sincere he was in regarding himself as the most loyal of Darwinians, will be brought home to any one who turns to certain passages where intense admiration of the great naturalist takes on an almost lyric form of expression.

Mr. Romanes used to defend such passages in prose against the reviewers, always in ambush and ready to pounce upon the accidental blank verse of prose-writers. Certain themes and certain ideals seemed to him not to justify only, but to require, some departure of this kind from the accredited modes of pedestrian writing. Not the least interesting among the traits of this strictly scientific scholar was the poetic temperament which found private expression in verses known to his friends. The wideness of his view of life is further exemplified in the active sympathy given by him to the movement in favor of opening galleries, museums, and libraries on Sunday. While in London he gave many Sunday lectures, and thus contributed by efforts of his own toward the practice of the sort of Sunday observance in which he believed. Such a man was not in his element where controversy was at its height, but still he had a fair share even of that. His publication in 1886 of "an additional suggestion on the origin of species," wherein he developed his theory of "physiological selection," did as a matter of fact give rise to a very notable war of words. Since his ripest years have been incapacitated by an illness which has just ended fatally, and deprived science of the full and final fruits of his original research, it must now be recorded as his greatest service that he did much towards the successful confirmation of Darwin's views. Adherents and opponents alike will allow that these views were brought by Mr. Romanes before the non-scientific public in such a manner as to win a fair hearing and gain a wide acceptance for them. A few of his more notable books not mentioned above are his 'Animal Intelligence,' 1881, his 'Scientific Evidences of Organic Evolution,' 1881, and his 'Mental Evolution in Man,' 1888. His contributions to magazines have been numerous, and are well known.

Mr. Romanes came to live in Oxford rather more than a year before his health broke down, and was made an M.A. and a member of Christ Church College. His foundation of the Romanes lecture, and the three lectures of Mr. Gladstone, Profs. Huxley and Weismann—all this is of recent and familiar notoriety. His friends, however, have alone the privilege of remembering his rare fortitude under suffering, and the devotion to scientific work from which he remitted nothing to the very last. Less than an hour before the fatal stroke of apoplexy, he was engrossed in preparations for a series of experiments that he hoped to complete during the summer. L. Dyer.

ÎLE DE FRANCE AND PICARDY.—IV.

London, April, 1894.

Noyon, our next station, has an interesting municipal history, which has lately been fully investigated from manuscript sources by M. Abel Lefranc in one of the monographs of the École des Hautes-Études. It appears that this city has been too much congratulated on the pacific origin and course of its commune, and that the legend which has grown up, of a benevolent bishop promoting its charter and the Church looking with a favorable eye upon the commune, is no more warranted by facts in Noyon than it would be in Laon. There was, indeed, less fighting than in the neighboring towns of Saint-Quentin, Chauny, Soissons, Laon, Amiens, and Beauvais, but there was continual litigation.

Noyon was a typical episcopal city, full of canons, clerks, and proctors. Its many churches and its rich and powerful abbeys covered half of its territory, and received the greater part of the revenues. Among themselves the ecclesiastics were not always at peace. The bishops and the monasteries or the bishops and the chapter were often at loggerheads, nor was it always the bishop who was victorious. But bishop, canons, and monks were firmly united when it came to a contest with the laity, whether it was with the châtelain or the commune, and they ended by getting substantially the whole power into their own hands. The châtelains of the tenth and eleventh centuries were not the same officers as those who are found in the latter part of the eleventh and later. The first were delegates of the king, the second were lieutenants of the bishops, but the struggle for power seems to have been equally eager in both cases. The earlier châtelains were no doubt more offensive to the bishops, who had no authority over them, and were equally hated by the commune which they oppressed. So the citizens willingly joined Bishop Hardouin de Croÿ when, taking advantage of the absence of the châtelain and his men, and getting admission to the castle on pretext of showing to the châtelaine a rich piece of silk, he carried her off to his palace and entirely destroyed the keep. At first it seemed as if his successful stratagem had not profited him much, for he was obliged to flee to Flanders to escape the king's wrath. But everything turned out well; for the Count of Flanders, bribed by the surrender of some altars which the bishop owned in his territories, made peace for him with King Robert, the donjon never was rebuilt, and the royal châtelain disappears from Noyonese history. The bishops were thereafter supreme masters, being counts and high justiciaries, till they themselves set up a line of châtelains as their substitutes in the execution of justice, when these delegates, usurping power wherever they could, became in time rivals to their originators, and would gladly have played the rôle of masters of the palace, but did not succeed.

The other lay enemy was the commune. Its charter, the first communal charter except that of Cambrai, granted at the very beginning of the twelfth century, was made of little effect before the close of the thirteenth by the fault of those who held it—the aristocratic bourgeois. For the commune of the Middle Ages was no more democratic than the Italian republics, or the Greek republics, or the Southern States of our Union before the civil war. The "liberties" of the city did not belong to the people, who had no political power, but to the rich and influential families, who divided the offices among themselves and managed the finances without control. Naturally, when he who pays and he who spends are different persons, the one becomes in time wearied of the burden or the other becomes careless and extravagant. The first of these results appears in the terrible riots of the thirteenth century at Ypres, Ghent, and Bruges in Flanders, where manufactures had made the working class strong, and in some of the larger cities of France. But Noyon, which once had had considerable commerce, had declined in industry; the Church had entirely got the upper hand; it was a city of clerks and monks, of convents and churches—*Noyon la Sainte*, with even a better right to the title than Laon. Its laboring class were in proper subjection, and its communal life peaceable compared to the bustling towns around. Its only two riots were in 1027, when the people followed the Bishop in razing the castle, and in 1223, when they followed the magistrates in a quarrel with the canons, and, attacking the cathedral, maltreated its officials. But this very submissiveness of the people led the aristocracy into financial extravagances which resulted in their abasement. The city failed! It was absolutely unable to meet its obligations, and the liquidation took half a century. The embarrassment and discredit that this state of things brought upon the magistracy—combined with the loss of their cause in the matter that had led to the riot of 1223, when a court of appeal, in which were the Archbishop of Rheims and the King himself, condemned them to pay damages, make an apology, and thereafter annually to take oath never to lay hand on the person or the goods of the canons, clerks of the choir, or sergeants of the chapter, and never to raise the seditious cry of *Commune! Commune!*—left them shorn of their power. Henceforth the bishops ruled untrammelled.

There is no new lesson to be drawn from this sketch of the history of a pious town. These are old morals—that for power to be stable its basis must be broad, and that where authority has no check it is likely to have little duration. But it is interesting to find the troubles of the present day cropping out six centuries ago—a corrupt ring, a great debt, and a *populus qui vult decipi*. The financial failure of a mediæval town, too, is perhaps something unusual. Is there any other example?

The cathedral is a fine example of a transitional church. In the eleventh century round arches alone were used; in the thirteenth they had entirely disappeared in northern France, and ogives were your only wear; but in the century between, in which the cathedrals of St. Denis, Noyon, Laon, and Senlis were erected, though the builders were pleased with the new and graceful form brought by pilgrims from the East, and had perceived many of its constructional advantages, the employers had not yet lost their love for the arch of their fathers. A compromise seems to have been the result. The architects freely mixed the two styles, at Laon sandwiching two stories of round arches between the ogives on the ground floor and those in the clerestory, and at Noyon putting two stories of round above two stories of pointed arches. The columns show the same indecision; a simple round shaft and a group of columns alternating in the nave. The circular ends of its transepts, too, are a feature which the cathedral shares with those of Tournay and Soissons, but which could not be found in any church of the next century.

But the mixture of styles, though it is interesting to observe, is after all of little importance. The main question is, What result did the architect draw from his materials? Now Noyon is singularly pleasing, and merits all the praises which its enthusiastic historian lavishes upon it. It is well set, too, among buildings of a grave, decorous character, such as one would expect to find in a city of priests and monks. The chapter-house adjoins it on the north, and one side of a very fine cloister, pleasant enough to make one wish to be a monk, in which are displayed columns and capitals and slabs from parts of the buildings that have disappeared. Many great monuments in France have this museum of architectural relics, from which one sometimes gets a better idea of the past richness of decoration than from the building itself. C. R.

A BLIND ARCHITECTURAL GUIDE.

Alassio, May 15, 1894.

One is tempted to think that a chronology of architecture which gives a year-by-year table of the architectural events of Europe from the year 303 of the present era to 1626* must be interesting and useful to the student. The period embraced between the foundation of the first basilica of St. Peter at Rome and the dedication of the present church covers the history of modern architecture—at least all of it which is of any great value. Mr. Tavenor Perry's Chronology is supplemented by an index of names of places by means of which it is easy to follow the growth of, for instance, a given cathedral, from its foundation to its completion, with the various additions it may have received and the restorations undergone. Then comes a table of architects, sculptors, and other persons referred to in the chronology, and lastly a list of authorities consulted. To all this there is an introductory synoptical table of the characteristics distinguishing "the various periods of Western architectural art."

Now such a book ought to be of handy reference, but a slight examination proves it to be, if not absolutely worthless, at least very far from fulfilling the promise it holds out. The statement of the publisher that the work is intended to accompany Fergusson, together with the assertion of its preface that nowhere has the rise and fall of the Gothic schools been so completely described as in the pages of the 'Handbook of Architecture,' might well make one suspect that this is only another of the happy-go-lucky compilations in which England is already too rich. *Ex pede Herculem;* the suspicion soon becomes a certainty. For instance, opening the book at random, here is the record for the year 1233; though short, it

*'The Chronology of Mediæval and Renaissance Architecture; a date-book of architectural art, from the building of the ancient Basilica of S. Peter's, Rome, to the consecration of the present church.' By J. Tavenor Perry, member of the Royal Institute of British Architects. London: John Murray. 1893.

is long enough to illustrate the merits and defects of the work:

"Bazas—Cathedral begun.
"Dunkirk—Hôtel de Ville first built.
"Heisterbach—Choir of church consecrated.
"Lucca—Duomo. Bronze reliefs by Nicola da Pisa.
"Milan—Piazza dei Mercanti built."
"Southwell—Minster. Choir and chapter-house begun by Bp. Walter de Grey."

We will refrain for the moment from any criticism of the first three entries in this list (though each of them gives rise to exceptions), but with regard to the reliefs at Lucca, where did Mr. Perry learn that they were in bronze? Most people who have seen them have taken them for marble, as indeed Vasari expressly states them to be, in praising enthusiastically their workmanship. As to the name of the artist, under the date 1230 is found S. Maria della Spina at Pisa, and under 1231, St. Antonio at Padua, both by Niccolò Pisano. Does Mr. Perry suppose that this is another artist from him who did the reliefs at Lucca, or does he simply think it of no consequence how his name is spelled? He is certainly capable of the latter belief, perhaps also of the former. In the succeeding entry, what does he think is the meaning of Piazza? The building he indicates—the only one, that is, of about this date—is the Palazzo della Ragione. It is situated in the middle of the Piazza dei Mercanti. On one side is the Palazzo degli Osii, which Mr. Perry mentions under its approximate date, and on the other is the beautiful Palazzo dei Giureconsulti, which he does not mention at all. Indeed, it appears upon further examination that what is inserted and what is left out are equally without rhyme or reason, and in obedience solely to the dictates of the author's intelligence. What this is can be illustrated if not explained.

Opening the book, again at random, you may find that the date 1507 is on a window of the church of S. Godard at Rouen, that in 1508 the retable of the high altar in the cathedral of Avila was painted, that in 1509 the clock was put into the gable of the porch of the Frauenkirche in Nuremberg (under the same date Fergusson's blunder about the "Holy Anders" church at Wisby is repeated), and in 1510 benches were put into the church at Kiedrich. We would not doubt the importance of these and similar facts to some people. To Mr. Perry they would appear highly remarkable. With regard to the little town of Villingen, he has three notes: 1478, Rathhaus, earthenware stove; 1537, Rathhaus, date on doorway; 1613, Minster, date on font. In 1538 the bells of Madley Church were brought from the Abbey Dore. Carried out with such minuteness this work ought to have consisted of ten volumes instead of one. As it is, the space for these trifles must be gained at the expense of more considerable things.

After a slight examination, one might say—at the risk of seeming Irish, to be sure—that the omissions are the principal part of the book. Two inferior churches at Pavia are spoken of, but no mention is made of S. Michele, which to the architect and archæologist is worth all the other churches in the city put together. At Aachen the first date given for the minster is 1353, when the late Gothic choir was begun; the nave built by Charlemagne after the model of S. Vitale at Ravenna, and for which he brought not only artists, but marbles and bronzes, from Italy, one of the most interesting monuments in all Germany, is utterly ignored. Why, when the hôtels-de-ville of S. Quentin and Noyon are given, should not also be those of Dreux, Compiègne, Middleburg? Why, when Mr. Perry recognizes the existence of Münster, should he be oblivious of Osnabrück? or what claim has the Jesuit church in Bonn to mention which is not good in a much higher degree for the cathedral there? Why should a chronicle of Gothic art be silent about Morienval, where the Gothic principle was perhaps first essayed? How can a list of Renaissance art in France omit the châteaux of Amboise, Anet, Châteaudun, Écouen, Beauregard, or how can its record of mediæval art be complete without a word of Aigues-Mortes, the fortifications of Carcassonne or the churches in the lower town there, of Moulins, of Paray-le-Monial, of Coucy-le-Château, of Valence, or Vincennes? So we have Mantua without the palaces del Te or of Giulio Romano, Verona without S. Zeno, Brescia without the Madonna dei Miracoli, Parma without the Madonna della Steccata, Piacenza without S. Maria della Campagna, Genoa without S. Maria in Carignano, Rimini without S. Francesco, Vicenza without anything of Palladio except the Rotonda or Villa Capra (which Mr. Perry characteristically calls Villa Capri), and no Urbino at all, no Gubbio, nor Bergamo, nor Pienza, nor Pesaro.

But why go on? These omissions are a part only of those revealed by a cursory examination, but "enough is as good as a feast." Our little excursions of discovery among Mr. Perry's pages might have been a little dull had not the dead level of blunders been occasionally enlivened by an eminence that shows our author to be remarkable in his way. We were startled by stumbling upon the name of Söchisher-Reen, which did not evoke any memory and did not smack of any country or any language in Europe. Gazetteers, architectural works, and atlases were in vain interrogated—no such place was found. Perseverance, however, elicited the fact that Mr. Perry had merely played one of his little tricks upon the name of Sächsisch-Reen in Hungary. The second surprise was still more diverting: among the churches of Milan was found, with the date 1477, that of S. Abbiate Grasso. About thirty kilometres from Milan there is a small town called Abbiategrasso, which has a church ascribed to Bramante, that may well be of the year given. It certainly is a peculiar ingenuity that can evolve from such a fact as this a new fat saint for the calendar. But Homer nods, and even Mr. Perry cannot always remain at the height of Mrs. Malaprop; most of his slips of spelling and language are trivial enough to excite compassion in place of admiration. Blaubeuren appears in his pages twice as Blaube*vern*, and once, with an effort after exactness worthy of a better result, as Blaubeüren. Che*r*nonceaux, la Martore*n*a (3 times), S. Salvatoro, Palazzo A*b*bergati, Luca della Ro*b*ia are other few examples of his orthography, while his Italian is represented by such jewels of speech as Piazza *degli* Signori, S. Maria della Grazie, Sagr*a* Spico (for Sagro Speco), etc. Of course there is either no question of accents, or they fall where they will, as in S. Maria di Gèsu.

In fact, one is at a loss to know what Mr. Perry has ever seen, what judged, or what learned. The things left out prove that he has yet to see many of the most important architectural centres of Europe, the things put in that he has no judgment, the authorities cited that he does not know what or how to read. His book is a haphazard compilation, with scarcely a pretence of original research, made without sufficient knowledge to control the sources of information or to distinguish what is worth noting from what is worthless.

In itself considered, the idea of chronological tables of architecture is not a bad one, but, in order to be of any use to anybody, it would not be amiss that they should be made up by some one who really knows about the art in question. Mr. Perry's book reminds one of the curious fact that architecture, the art most closely related to every-day life, has been, in English at least, almost exclusively treated by charlatans or Dryasdusts, patiently occupied with the dead details, but stone-blind to everything in it that is living and essential. This is so much the case that it was a surprise when, a short time ago, Sir F. Leighton, in his lecture before the students of the Royal Academy upon the Gothic period in Germany, said that Gothic architecture seemed to him a matter of principles rather than of forms. Academic reserve did not allow Sir Frederic to state his conviction more strongly, but in point of fact, since the appearance of Viollet-le-Duc's 'Dictionnaire Raisonné de l'Architecture Française,' in 1858, there has been no excuse on the part of educated artists for thinking otherwise. There is no more doubt than in the case of a proposition of Euclid. Still, there are reasons why the truth should be of difficult acceptance in England, and Mr. Perry gives abundant evidence that the old school of ignorance is still alive.

Indeed, while in France writers have not been wanting capable of explaining just what Gothic architecture is, I know of but one book in English that clearly embodies the results of modern research on the subject. This is the work of an American,* and consequently free from the chauvinistic bias that makes Englishmen try to prove that if Gothic art was not born in their country, it was at least as much at home there as in France, and produced there some of its noblest triumphs. Mr. Moore shows to a certainty what were the exigencies that gave rise to that art in France, and how these exigencies determined absolutely every feature of it. Thus much he does in following Viollet-le-Duc and other French authors; then of himself, but with equal mathematical conclusiveness, he shows that in England, unless the work of Frenchmen or directly inspired by French influences, there is no such thing as Gothic architecture as it was evolved in its native land. He shows, for instance, how the cathedrals of Salisbury and Wells are nothing but an application of pointed arch forms to Romanesque (or Norman, as the English call it) construction. In adopting the pointed arch, the English builders seemed to think that they had assimilated what was essential in the new art; but because they were bound by the mere forms, and oblivious of the principles and the system of which these were but a consequence and part, Mr. Moore refuses the name of Gothic to their architecture. And without being a rigorous purist, one can hardly refuse assent to the proposition: if that which constitutes the architectural distinction of Rheims and Amiens, differentiating them from the Abbaye-aux-Dames at Caen, be what we agree to call Gothic, it would be absurd to give the same name to the architecture of Salisbury, where the essentials are borrowed from Normandy, and then "make believe" only to be something they are not. Similarly, Germany and Italy borrowed the art without understanding its *raison d'être*, and so for the most part did nothing but misrepresent it. Mr. Moore accordingly bestows the name *pointed* on all mediæval architecture outside of France, or rather of that part of it, with Paris for a centre,

*'Development and Character of Gothic Architecture.' By Charles Herbert Moore. Macmillan & Co. 1890.

where the true Gothic was invented and practised.

It will be readily seen that this nomenclature will not be acceptable to everybody—notably not to Englishmen. None the less is it true that our language boasts no more clear, sufficient, and convincing statement of what Gothic art really is than the work of Mr. Moore. S. K.

Correspondence.

THE LATEST SCIENTIFIC DEVELOPMENTS OF POLITICAL ECONOMY.

To the Editor of The Nation:

Sir: At the International Bimetallic Conference held in London, May 2 and 3, Mr. A. J. Balfour is reported to have thus expressed himself:

"The general consensus of scientific economic opinion has now for many years been thrown with an overwhelming balance of opinion into the scale of the double standard. I am not offering now an opinion as to whether the double standard is just or is expedient—I am only discussing whether it is possible; and I say that on that question there is practically now a consensus of the whole economic scientific opinion which has devoted itself to the elucidation of this problem, and any man who, in the face of that opinion, now quotes any of the old tags about demand and supply making it impossible to fix a ratio between the two metals, or such doctrines as that the interference of the State to fix prices must necessarily fail—any man who now relies on arguments of that kind to show that the double standard is an impossible expedient, does nothing else than write himself down an individual ignorant of the latest scientific developments of political economy."

Mr. Balfour's remarks are very similar to, and almost identical in substance with, some made by Prof. Andrews of Brown University at the Congress of Economics and Politics held in this city March 29 and 30 of the present year.

Mr. Balfour went on to say that "of course the percolation of scientific opinion through the general body of the community is slow," etc. Now the practical consideration of this subject internationally has not been by the general body of the community, as one might infer from Mr. Balfour's remarks, but by the "judicious few" who have given the subject profound study on account of its practical bearings on the general welfare—trained experts, as it were. At the first session of the Paris International Monetary Congress of 1881, M. Magnin referred to the two great preceding congresses held in Paris, the first in 1867 and the second in 1878, at the first of which, in a representation of twenty States (only two of them then maintaining the gold standard), the conclusion was reached that the surest basis for the monetary unity of the future should be sought in the gold standard, "with silver, if need be, as a temporary companion" — in which the delegates concurred by a seven-eighths majority. In 1876, a commission was appointed in this country to consider the subject, from which the Paris Congress of 1878 resulted. Practically, the action of the Paris Congress of 1867 was confirmed by that of 1878, and also that of 1881, and also that of Brussels of 1892, and gold remains to-day the standard of all the great commercial nations.

In view of the deliberate conclusions, thrice confirmed by the best-equipped men available as judges, men who brought to the consideration of the subject substantially all that is comprised in the term scientific attainment—knowledge and wisdom derived from study, observation, and practical experience—what does Mr. Balfour mean by his assertion that any man who now "quotes any of the old tags, etc., writes himself down as ignorant of the latest scientific developments of political economy"? Prof. Andrews's remarks, already referred to, indicated that he deemed the exclusion of silver from free coinage to have been vastly calamitous, nationally and internationally.

Such assertions by men like Mr. Balfour and President Andrews confirm the free-silver advocates, the Populists, the Prohibitionists, Coxeyites, etc., in their delusion that they have been grievously wronged by the exclusion of silver from unrestricted free coinage. Will you kindly give us a synopsis of "the latest scientific developments of political economy" in this particular field of investigation to which Mr. Balfour refers, and to which Prof. Andrews also referred in like tone?

A Layman.

San Francisco, May 26, 1894.

A NICE POINT OF BIBLICAL ENGLISH.

To the Editor of The Nation:

Sir: In Luke xxiv. 51, in the authorized version of the Bible, we read "he *was parted from* them and carried up into heaven." Instead of this, the Victorian revisers give, after Wakefield and others, "he *parted from* them," etc. Tyndale, followed by many, has "he *departed from* them," all one with which is Wycliffe's "he *departide fro* hem."

Whether the learned often differ, nowadays, from the unlearned, in their understanding of *he was parted from them*, as occurring above, is exceedingly questionable. Do they not take the construction to be passive? So, at all events, it is taken by one of the recent Revisers, the Rev. W. G. Humphry, Prebendary of St. Paul's Cathedral, who, in his *Commentary on the Revised Version of the New Testament* (1882), observes on the new rendering and the one replaced by it: "The Greek has not a passive sense." Consonantly, in the *Bible Word-book* (1884), Dr. W. A. Wright, one of the Revisers' secretaries, explains the *parted* under discussion by "separated," and parallels the *was parted* with *were parted* in Shakspere's "They *were parted* With foul and violent tempest."

On the view thus indicated of *was parted* in Luke, it is assumed that the divines employed under King James I. were so unscholarly as to suppose a passive in διέστη, "stood apart," etc.

Tyndale's translation has "he *departed from* them, and was caryed vp in to heven." But it seems as if, to the Revisers of 1611, *depart from*, compared with *part from*, went too far, and suggested the idea of withdrawal, ensuing on separation, beyond that which is warranted by διαστάναι. Furthermore, as one may conjecture, it was considerations of rhythm that led them, when they substituted the shorter word for the longer, to prefix to it, as they did with the allowance of living usage, *was;* the result being that, at least to us of the nineteenth century, they appear, unless minutely scrutinized, to have intended two passives, *was parted* and *was carried up*. Besides this, in any English short of very archaic *was parted* implies that some external agency was brought to bear in order to Christ's retiring from his congregated disciples.

That *was*, in the character of a passive auxiliary, is to be mentally resumed before *carried up*, in "he was parted from them, and carried up into heaven," is obvious. Yet, before *parted*, *was* is a copular auxiliary, not a passive; just as it is in the obsolescent "he *was* risen." Such is my position; but it remains to make it good.

Mr. Goold Brown, like a genuine old-school grammarian, classes *I am mistaken*, "I have made a mistake," among "errors of conjugation, or, perhaps, of syntax." In No. 1442 of the *Nation*, setting forth the rationale of that locution, I have demonstrated that we have, in it, as we frequently have, the adjectival use of the past participle of an intransitive verb. And the same use, I contend, is presented in the *was parted* before us, where *parted* denotes "gone apart."

The option, at present, of *I mistook*, in preference to *I was mistaken*, is mainly a matter of taste; the two expressions, while equivalent in import, being, almost in an equal degree, at once intelligible to everybody. Different, however, are the old Biblical *was parted from* and *parted from* which has been proposed to take its place; in that the former, over and above its having entirely passed out of currency, is altogether misleading. The Revisers' phrase is, therefore, liable to no objection, except that, though it occasions no perplexity, it is rapidly falling into desuetude.

Of the intransitive *part*, in its sense which is but slightly distinguishable from that of *depart*, a sense of it far from uncommon in Elizabethan English, no earlier authority than Milton's is adduced by Dr. Johnson, or by his editors, Archdeacon Todd and Dr. Latham. And they all hastily derive it from the French *partir*. The fact escaped them, that the conversion of a transitive verb, with or without an intervening reflexive, is an ordinary phenomenon, and that such a conversion may have befallen *part*. But again, and not improbably, the intransitive *part* originated, by aphesis, from the intransitive *depart*, in which *de-* is atonic. That it was felt to be shortened from *depart* is evidenced, it may be, by the anomalous use of it seen in the subjoined verses, dating some time before 1600, from Sir John Harington's *Epigrams*, Book IV., No. 42:

> "A man appointed, vpon losse of life,
> With bag and baggage, at a time assin'd,
> To *part* a towne, his foule vnweildy wife
> Desired him that she might stay behind."

Here we have the like of *depart* in "he *departed* this life," as we have again in the following quotation:

"In truth, their perpetual teasings diminished my regret at *parting* this second Eden." Anon., *The Minor* (1787), vol. ii., p. 222.

A short time ago, in the course of some remarks on *to part from* and *to part with*, I said that the Bible nowhere exhibits either of the combinations. I had consulted a concordance for them; and a friend has reminded me that I cannot have extended my search to *parted*, where there is a reference to Luke xxiv. 51. This latter has, indeed, no justification in my carelessness; but yet it is amply justified by the circumstance that, though the *was parted* on which I have been dwelling must have been misapprehended by readers without number, nothing, so far as I have means of discovering, has been hitherto written to rectify their misapprehension. F. H.

Marlesford, England, April 7, 1894.

INTERNATIONAL POSTAGE STAMPS.

To the Editor of The Nation:

Sir: A fatal objection appears to me to stand in the way of the adoption of international postage stamps. Each country, ex-

pediting at its own cost its external correspondence to the confines of the countries to which such correspondence is addressed, and delivering free within its own borders correspondence received from abroad, retains the full value of the postage stamps it sells. No accounts for ordinary postage are kept between nations. It is presumed that upon the average one letter will bring one reply, one newspaper another newspaper. International postage stamps would hopelessly complicate this arrangement. If I bought four shillings and twopence' worth of such stamps here and sent them to a friend in New York, the United Kingdom would pocket the money, and the United States would be at the expense of forwarding gratis one dollar's worth of mail matter.—Sincerely yours, ALFRED WEBB.

HOUSE OF COMMONS, LONDON, May 22, 1894.

Notes.

GINN & Co. will publish next month 'The Philosophy of Teaching,' by Arnold Tompkins.

The Messrs Putnam will begin in July the publication of "The Hudson Library," a new fiction series of bi-monthly issues. The initial volume will be 'Love and Shawl-Straps,' by Annette L. Noble. They have also in press 'Eyes like the Sea,' by Maurice Jókai,' and 'The Story of South Africa,' by George M. Theal.

Dr. W. J. Rolfe supplies an exceedingly long introduction, treating almost entirely of the development of the Romeo and Juliet story and the various forms which it took on before it reached Shakspere's hands, to a reprint of an English translation of Da Porto's charming sixteenth-century tale, 'Juliet and Romeo' (Boston: Joseph Knight Co.). More interesting than such a mass of descriptive matter would have been some information as to the condition of the Italian *novella* in Da Porto's time, and the relation which his work and style bear to those of his contemporaries and predecessors. The little book is bound in white, and contains a number of illustrations, almost all of which are modern and romantic in spirit, and entirely inappropriate for an Italian story of nearly three centuries ago.

To appreciate thoroughly Abel Hermant's 'La Carrière' (Paris: Ollendorff; New York: Charles Eitel), the reader needs to have his Paris—his boulevard, that is—at his finger's ends, and to be entirely willing to concede that Scribe's view of history and diplomacy was the correct one. It is that adopted by M. Hermant in his representation of the inner working of courts, embassies, and salons generally. The dialogue (with brief exceptions the whole book is a dialogue) is full of the latest slang, of suggestion and allusion, admirably managed, and bringing out the particular characters as they successively appear. It is a bit fatiguing, too, for the abrupt, broken phrases and the frequent stage directions pall quickly.

A very different as well as more satisfactory piece of work is Jean Reibrach's 'Les Lendemains' (Paris: Ollendorff), which is a very delicate, very subtle, very fascinating study of a woman's heart. The style is daintily engaging, at times languorous, at times pathetic, always refined and winning. There is not much plot, but one does not miss it; the story, slight as it is, being told so well and the revulsions in the heroine's feelings so cleverly analyzed. The hero is romantic, a vague remembrance of Chateaubriand and Hugo; but there is, by way of ample compensation, a very lovely portrait of a pure, frank, firm girl, a type not often attempted by the French novelist. 'Les Lendemains' will amply repay perusal.

'La Cendre' is by one of the *Jeunes*, Fernand Vandérem (Paris: Ollendorff), and is sure to succeed with the French of Paris and a few foreigners. It makes one reflect on the French love of conventionality: there was the conventional classical tragedy of the seventeenth century; the conventional "homme bon" of the eighteenth; the conventional "homme fatal" of the Romantic school, and then the conventional woman who is always an adulteress in thought, word, or deed—usually all three—and the conventional man who marries only to make an end. He and his females are M. Vandérem's characters, and their sensualities are dignified with the name of love, and their lying and treachery are carefully, affectionately depicted, and every one deceives every one else. The book is very conventionally French, and the life it depicts possibly true, but very wearisome and stale and unprofitable.

M. Gaston Boissier's latest work, 'La Fin du Paganisme' (Hachette & Cie.), will interest many classes of readers. Moot questions are passed upon ingeniously and plausibly, with ample learning to arrest the attention of the best informed. The whole mass of biography and literary criticism which makes up his two stout volumes is strictly relevant evidence in favor of a single simple thesis. This thesis is, that modern civilization has resulted from a compromise between Christianity and pagan culture which had reached an issue at the time of the fall of Rome, was laid on the table by the invading barbarians, and was revived and definitively passed upon by the Renaissance and Reformation. To the first of these three periods, the fourth century after Christ, M. Boissier devotes his present study. Everywhere he insists upon the fundamentally compromising policy of the Christians, especially in politics, education, and literature. Contrary to the usual opinion, he maintains that the platform of the Church was tolerance, liberalism of the most marked nature, and that the Church was heartily with the Empire until its ruin became an irrevocable fact, and self-preservation commanded an acceptance of the new order of things. To the fundamental objection that Christianity could not without self-debasement have countenanced so corrupt an institution as the late Empire, M. Boissier opposes the unprejudiced, because unintentional, evidence of Symmachus, to prove that Roman society in the fourth century was far less vicious than the current opinion of it due to uncritical reading of polemists like St. Jerome.

The thirteenth instalment of Hatzfeld, Darmesteter and Thomas's 'Dictionnaire Général de la Langue Française' (Paris: Charles Delagrave) concludes the letter E and makes beginning of F. The scheme of this popular work approximates it to Webster or Worcester. It gives the pronunciation, and, very concisely, the etymology of each word, with a fair number of illustrative citations, and at all points may be instructively compared with the much fuller Littré. We will note here a difference in syllabication when indicating the pronunciation, as (*exhorter*), Littré è-gzor-té, Hatzfeld èg'-zòr-té; (*exfoliation*) Littré èk-sfo-li-a-sion, Hatzfeld èks-fò-lyà-syon (adding that in verse -li-à si-on prevails); (*estouffade*) Littré è-stou-fa-d', Hatzfeld ès'-tou-fad', etc.

The appearance of a new and improved edition of Maruffi's 'Piccolo Manuale di Metrica Italiana' allows an opportunity to call attention to the little book as probably the best short, scholarly, and sensible treatise on Italian metrics. The unphilological reader can understand it, and the advanced student will be glad to see and profit by a work on the subject so thorough and yet so succinct. It is also worth while to notice with regret, if not with shame, that there is no account in our own language of English metrics that serves a similar purpose and can meet with equal praise.

The second part of the fourth volume of D'Ancona and Bacci's 'Manuale della Letteratura Italiana' (Florence: Barbèra) deals exclusively with the minor writers of the eighteenth century. If the general scale be not changed, the whole work will be completed in another volume. In this field also we have nothing in English dealing with English literature on a like scale and equally well done. Ward's 'English Poets,' deservedly so popular as an anthology for the library and as a text-book for the class-room, comes nearest to it, but that covers only the poetry, and the introductions and comments are more concerned with literary criticism than with literary history.

The March Library Bulletin of Cornell University records the gift of a remarkably rich and extensive Spinoza collection, thought to be the largest in existence, from ex-President White; some two hundred volumes of works on Romance philology, from Prof. Crane; and such additions to Prof. Willard Fiske's Dante collection as to bring it up to nearly 3,000 volumes, and to constitute it "undoubtedly the richest outside of Italy." The Library has just issued a catalogue of Prof. Fiske's "Rhæto-Romanic [Romaunsch] Collection," gathered rapidly by the donor three years ago in the Tyrol. It fills thirty-two pages in double columns, and the collection, which has a curious linguistic interest, probably has no rival in completeness.

That part of the Report of the National Museum for 1892 which relates to Japanese Woodcutting and Woodcut Printing has just been issued separately from the Government Printing-Office. The author is Mr. T. Tokuno, chief of the bureau of engraving and printing of the ministry of finance at Tokio, and his account has been edited by Mr. S. R. Koehler, curator of the section of Graphic Arts. It accompanied a gift to the Museum of a complete outfit of tools and materials, together with express illustrations which are here reproduced and are very curious. But one graver, always of the same pattern and size, is used for coarse work or the finest. It is held very much in the way shown in Jost Amman's 'Book of Trades,' 1568. Modern cutting is much shallower than the ancient, as with us. The cherry is the favorite wood, and the engraving is on the plank side. The ink is water-color, and the printing extraordinarily rapid.

A hint of future extension of teaching in our public schools is contained in the current annual report of the school committee of Cambridge, Mass. For geographical instruction with the aid of the lantern, Prof. W. M. Davis supplies a list of 126 slides, which will be furnished at fifty cents through Mr. E. E. Howell, 612 Seventeenth St., N. W., Washington, D. C. The significance of each scene portrayed is described by Prof. Davis, who has drawn upon the great collection of photographs in the geological department of Harvard University. In time, doubtless, the lantern will form as much a part of the school equipment as the blackboard. The list has been printed separately.

Partisans of the adoption of the referendum

may be referred to Rhode Island's primitive experimenting (1647-1664) with that clumsy form of legislation, as described by Mr. Sidney S. Rider in his Providence *Book Notes* for May 5.

M. Homolle, writing from Athens, April 25, announces the recent discovery at Delphi of what may prove to be the prototypes of the Parthenon frieze as well as the porch of the Caryatides. One of these is a caryatid belonging to the end of the sixth century, resembling the archaic female statues of the Acropolis, but superior in style, executed by an Attic artist and possibly designed for the temple of Apollo. It is a preliminary sketch of the maidens of the Erechtheum. Another discovery of even greater interest consists of portions of a frieze representing a procession of chariots and of horsemen, and a charming group of three seated goddesses who converse together, and regard with curiosity some spectacle to which one of them naïvely directs the attention of her neighbor. All this recalls the composition of the Parthenon frieze, and was probably its forerunner and inspirer. If so, we should have another instance of the permanence of type and tradition which is so characteristic of Greek art. A link of great importance in the history of art will also be supplied by the remains of the "Treasury of the Athenians," which M. Homolle describes as a masterpiece of archaic architecture and sculpture, and would date *circa* 490–480 B. C.

The island of New Mecklenburg, one of the Bismarck Archipelago to the east of New Guinea, has recently been visited by Count Pfeil, who gives an interesting account of the natives in *Petermann's Mitteilungen* for April. His explorations were confined to the central portion of the island, the northern and southern parts being still inaccessible on account of the hostility of the natives to strangers. As it was, his party was attacked and two of his attendants were killed and eaten. Though inveterate cannibals, the natives are not pure savages, but have some conception of a supreme deity and believe in a future life, a certain island off the coast being regarded as the home of the dead, whence they sometimes return and bring misfortune upon their relatives. While the bodies of their enemies are eaten, their own dead are burned. The more costly the funeral pyre, the greater is the consequence of the individual, and many prepare the wood for this purpose during their lifetimes. The hopelessly sick are burned alive with their own consent. Great skill and taste are shown in wood-carving. Count Pfeil saw some pieces which were remarkable both for the delicacy of the carving (it was like lace-work) and for the fact that it represented a bird of paradise and a monkey, neither of which creatures is known to exist on the island. The weapons consist of axes, which the natives handle with great dexterity, and spears. These are decorated with the arm bone of a slain enemy, but, failing this, an arm is carved in the wood. With their drums they are able to send messages from one village to another, having "a whole Morse alphabet of drum beats." Adultery is punished with the death of the woman, as is her marriage with a person of the same caste, the natives being divided into two castes. They are keen traders.

The perfection of cartographic work is illustrated in a large sheet of the Oetzthal and Stubai in the Austrian Alps, one of a series of five sheets of that mountainous district in publication by Giesecke and Devrient of Leipzig for the Austrian Alpine Club. The map has been drawn by Simon, the Swiss expert engineer-artist by whom the celebrated model of the Jungfrau district was constructed. The base of the map is the Austrian army survey; but Simon has revised the whole district, taking more than seven hundred photographs as an aid to the correct representation of details. In its published form, the sheet is a model of clearness, both in its expression of relief by shading and contours and in its names and other culture marks. The combination of contours, hachures, and shading is far superior to any one of these methods of topographic representation alone. In illustration of the minuteness to which the map is carried, mention may be made of the crevasses of the various glaciers, whose attitude is correctly portrayed. As a map for Alpine excursions and as an ideal towards which our mapmakers may press forward, this sheet has our highest recommendation.

The sixth session of the International Geological Congress will be held this year at Zurich, Switzerland, from August 29 to September 2. A number of excursions under competent guidance of local geologists will be offered both before and after the session; a guide-book descriptive of the various routes may be had for ten francs. Subscription of members is fixed at twenty-five francs, to be paid to C. Escher-Hess, treasurer, Zurich. The opportunity afforded by the congress for vacation excursions, profitable in seeing men as well as places, should not be lost by our professors of geology.

—The *Century* for June has something of interest on several reforms at present discussed. Dr. Albert Shaw writes of the government of German cities, preceding his account by statistics which show that the growth of almost all the large cities of the empire during the last two decades has exceeded both in area and population the growth of American cities of corresponding size during the same period, thus anticipating and nullifying the conventional apology for our failures in municipal government. There is much, of course, in the German systems that is complicated, unnecessary, and inapplicable to our conditions, but there is much also that we could adopt with infinite benefit to ourselves, notably their insistence on fitness and capacity in applicants for office. Dr. Shaw points out that German municipal salaries are small, citing as an example the mayor of Berlin with his 30,000 marks ($7,500) a year. He omits to add, however, that this sum represents in Germany a great deal more, nearly double what it does with us, so that in reality the mayor of Berlin is better paid than the mayor of New York, and his term of office is twelve years. In line with this paper is the open letter on an honest election machine, as run by the "Volunteer Electoral League" of Montreal, an organization of young men intent on securing good government for their city. A collection of opinions from ex-ministers of the United States on the consular service and the spoils system is a valuable addition to the subject. Among the literary articles, the description of the mother of Ivan Turgeneff by Prof. Boyesen will especially interest those who are inclined to accept Lombroso's theory of genius.

—The *Atlantic* will likewise attract those interested in the municipal and educational agitations of the hour. Dr. Shaw appears in these pages also with an account of Hamburg's new sanitary impulse, which is the result of the cholera visitation of 1892. With characteristic German thoroughness, the authorities of the afflicted city have gone to the root of their trouble, and have introduced a hygienic system that is likely to prove a model for the rest of the world. Under the head of American Railways and American Cities, Mr. Henry J. Fletcher endeavors to trace a connection between railway discrimination and the growth of the large terminal cities at the expense of the smaller towns and rural districts along the line. The scope of the Normal School is the subject of a paper by Mr. M. V. O'Shea, who defines its present and its ideal functions with a sympathetic pen. The literary attraction of the number is the contribution of Sir Edward Strachey, "Some Conversations and Letters of Thomas Carlyle," which reveal the rugged genius in the pleasant light of friendly intercourse. There is a good deal of the great man's peculiar self in these intimate communications, and the constant complaints about his own and his wife's physical ailments that run through them remind one oddly of the hypochondriacal tone of George Eliot's letters. The end of Tortoni's, the famous restaurant which closed its doors about a year ago, furnishes Mr. Stoddard Dewey with the theme for a good old-fashioned article in *Spectator* style—much gossip about the *beau monde*, some kindly criticism, a touch of satire, and an apt Latin quotation at the end.

—*Scribner's* opens with an historical essay on Maximilian and Mexico, by Mr. John Heard, jr., who bases his article on documents, recently made accessible, which have thrown light on many of the details of that involved and tragic episode. The character of the nominal protagonist in this drama, Maximilian, is drawn with unsparing truth. Like Charles I., he seems to have been able to do but one thing successfully, namely, to die. Under the ornamental title, "The Story of a Beautiful Thing," Mrs. Frances Hodgson Burnett writes an equally ornamental but not very clear account of a London charity, the Invalid Children's Aid Association. In these days of organized charities, one expects such descriptions to be business-like, adequately informing, and not too pathetic. "The Dog" is the subject of a paper by Mr. N. S. Shaler, who denies the theory of canine descent through the wolf, and maintains that the present animal is derived from ancestors as distinctly canine, which in the wild state have long since become extinct. In regard to the breeding of dogs, he deplores what thoughtful critics of the annual dog-shows have already remarked, and that is the tendency of breeders to substitute the symbol of a desired quality for the quality itself in their culture of the animal. A certain shape of the nose, or width of chest, or peculiarities of coloring, are desired, and they breed towards them extrinsically, without any attempt to develop in the animal the qualities of which these external features are but the sign. Of course, this is in part inevitable, owing to the diminishing use of dogs in the various ways in which formerly their special characteristics were of practical value.

—*Harper's* gives first place to an article on Philadelphia by Mr. Charles Belmont Davis, who presents the Quaker City from the social point of view that obtains in the aristocratic old town south of Market Street. All that portion north of this thoroughfare has, we are told, no history. It is perhaps impossible to convey an adequate idea of a great city in the narrow compass of a magazine article, but to the majority of people Philadelphia means something more and something other than the place here described. In "Memories of Wendell Phillips" Mr. George W. Smalley gives a

spirited and truthful description of some of the stirring scenes in Boston during the winter of 1860–'61, when the famous orator was in greater peril from mob violence than at any period in his career as an abolitionist. Mr. Smalley seems to intimate that he is engaged upon a fuller account of his subject. Another journalist, Mr. de Blowitz, is among the contributors for the month, with an essay on French diplomacy under the Third Republic, which gives a good general idea of the present personnel of the service. Mr. Alfred Parsons, the artist, writes of and illustrates profusely the Japanese spring. There is the usual amount of fiction, Du Maurier's "Trilby" still continuing to be the *pièce de résistance* in this department.

—The third Romanes lecture was given on May 2 in the Sheldonian Theatre by Prof. Weismann, who had been courteously provided with a D.C.L. gown by decree of the University an hour or two before his lecture began. His subject was the one with which his name is so conspicuously associated, but he gave no popular survey of the whole ground. He addressed himself to a careful and somewhat minute consideration of a portion of the evidence supporting his own view that characters acquired during the lifetime of a living being are not inherited by the offspring, saying in one of his more daring periods that there was about as much support in scientific evidence for the contrary view as there was for maintaining that the sun revolved around the earth. Discussing the characteristics of social insects—bees, termites, and ants—he argued in the case of bees that there is but one kind of egg, while the individuals produced are of three kinds, queens, female workers, and drones. Unfertilized eggs produce males, fertilized eggs produce female grubs, and of these only the well-fed become queens, the others becoming workers (imperfect females). Here an external cause, abundant food, would appear to determine the character of the adult, and this character would appear to be transmitted by inheritance. But the female workers are sterile and cannot transmit anything, and therefore the capacity for change according to the amount and quality of food obtained must inhere in the race. House flies, the lecturer showed, are not affected by diet in any analogous fashion. Half-starved maggots produce smaller flies, but these are quite as fertile as larger ones whose larvæ had lived in abundance. Confronting the two cases, Dr. Weismann argued that it is the different nature of the germ-plasm of an organism which determines the characters of the adult, and he maintained that external influences acted only as stimuli by which latent powers in the germ are called forth. Hence the external conditions which appear to determine characters are not in any sense a true *causa efficiens*, but merely a necessary condition for the appearance of that which is inherent in the organism at some stage of development. The lecturer ended with the conclusion that the Lamarckian explanation of evolution fails when applied to these cases of so-called "neuter" insects, as it has failed before when offered as an explanation of other biological problems.

—Many people, and especially those who have lately been reading M. Édouard Grénier's 'Souvenirs,' or have at hand M. Émile Deschanel's new book on Lamartine, will hear with sympathetic interest of the recent death at Paris of the poet's faithful and devoted niece. She is a principal figure in Deschanel's eloquent last chapter, "Les travaux forcés de l'honneur." Everybody knows of Lamartine's long struggle with the debts by which he found himself encompassed on his retirement from power. His case was even more pathetic than Scott's, since he lacked Scott's indomitable soul. Hopeless and sick with chagrin, he lived at the châlet of Passy which the city of Paris had granted for his use, and kept up the long struggle, which never was crowned with success. During these years his chief support lay in the devotion of his wife and his niece. In 1863 the niece was left to bear the burden alone, which she sustained with heroic piety and tenderness till the death of the poet in 1869. After his death she was obliged to give up the châlet, in lieu of which the city gave her a yearly stipend of 12,000 francs. In the years 1873, 1874, and 1875, she published the five volumes of Lamartine's correspondence. Mlle. Valentine de Lamartine, who early in life took the name of her uncle, was a daughter of Mme. de Cessia, one of the five sisters of the poet. She was sixty-three years of age at the time of her death, on May 16. She leaves many important papers and documents that were in her possession—notably the manuscripts of 'Jocelyn' and of the 'Girondins.'

—It is impossible within reasonable limits to give any adequate idea of the multitude and the interest of the subjects treated in the five bulky volumes bearing the general title of 'The Industries of Russia,' which the Russian Government prepared for the Chicago Exposition. They have come late to hand, but they will long remain a very valuable source of statistical and other information relating to Russian manufactures, mining industries, products, trade, and so forth. In fact, they are the only authoritative source of information available, in English, on many points. The haste with which they were necessarily prepared rendered mistakes inevitable, but it is safe to say that many people will learn from these volumes for the first time what wealth of natural resources and energy and industry vast Russia possesses. Two volumes are devoted to "Manufactures and Trade," and one volume each to "Agriculture and Forestry," "Mining and Metallurgy," and "Siberia and the Great Siberian Railway." The editing of the work in Russian was intrusted to the celebrated chemist Prof. D. I. Mendeléeff of the University of St. Petersburg. The editor of the English version is the American Consul-General, Mr. J. M. Crawford. Perhaps the most astonishing feature of this huge compilation, containing more than 1,600 large octavo pages, is the fact that the entire English version was set up and printed by Russians who knew not a word of the language in which they were working. Naturally, the abundance of technical terms with which every page bristles presented immense difficulty to the translators. However, an expert in any of the departments treated could readily make the corrections requisite for a profitable use of the facts therein set forth. The peculiarities of English are such as might have been expected from Russians turning their own language into another tongue, or from English people unused to translating, or so long resident in Russia as to have partially lost idiomatic control of their native tongue. The typographical errors are very few.

—The article on each branch of industry has been prepared by a specialist, and wherever maps and charts will help to a comprehension of the matter, they have been provided. Thus, there are maps showing the route of the Siberian railway, with the rejected routes, the location of the gold, silver, platinum, and other mines, and the amounts taken from them, and the railway connections all over Russia and Siberia, though the volume devoted to a "Review of the Railway and Steamboat Lines of the Empire," mentioned in the preface, has not been received. There are maps of atmospheric precipitation, of the principal soils in the black-loam region, of the density of population, of the area of cultivated lands in proportion to the whole surface for each government, a similar map of the proportion of forests; another which shows the ownership of land by the government, the peasants and private individuals; one which shows the distribution of different kinds of land, one which illustrates fertilizing, others for the area under rye, millet, Indian corn, and spelt, the prevailing crops, the average yield of rye, and of spring wheat, oats, and potatoes, the export of the principal cereals, in five-year periods; variations in price of the different cereals; the total number of cattle, with the distribution of large and small live stock, and many other maps and diagrams, colored and uncolored. The Russians have thoughtfully provided for each volume tables of weights and measures, with the equivalents in the English and the metric systems, and each article begins with an instructive historical sketch of the industry under consideration, supplementary to the more extensive historical sketch that introduces each volume. The volume which treats of Siberian industries, trade, railway, and mineral wealth is of particular interest, in view of the probable close connection with our country, and the development of its wealth by Americans when the completion of the trans-Siberian railway shall have rendered such development possible and profitable. Many people will, no doubt, be surprised to learn that in 1766 "a mining engineer, Polsounov, erected the first steam-acting blowing engine for blast furnaces at the Barnaoul works. Polzounov may justly be called the forerunner of Watt. In the Altai [Mountains] also the first experiment of laying down a tram-line was made in 1817, for transporting the ore from the Zmeinogorsk mine and the Zmeevsk works, along a distance of two and one-half versts." Those who have the patience and courage to attack these formidable volumes will be rewarded, and will agree with the director of the Department of Trade and Manufacture, who says in his preface that, "however successful the choice of exhibits [at Chicago] may be, they cannot convey an adequate idea of the productive forces of the empire and its industrial development," and will feel grateful to the Minister of Finance, Mr. S. I. Vitte, for having supplied the deficiency as far as was possible with this impressive survey. The Putnams market the volumes in this country.

LORD WOLSELEY'S MARLBOROUGH.

The Life of John Churchill, Duke of Marlborough: to the Accession of Queen Anne. By General Viscount Wolseley, K.P. Illustrated. Vols. I. and II. London: Richard Bentley & Son; New York: Longmans. 1894.

A LIFE of Marlborough by a general himself so distinguished as Lord Wolseley cannot fail to be full of interest. Marlborough, we suppose, would be generally allowed to be the first of British soldiers. If his reputation as a general does not vie in brilliancy with those of the most renowned commanders in history,

Voltaire could say of him with literal truth that he never fought a battle which he did not gain, besiege a place which he did not win, or undertake an operation which did not prove successful. He was not a scientifically trained soldier, and was perhaps on that account somewhat underrated by William, who, while he lacked military genius, was master of the science of war. Strong sense and great practical sagacity were, as the Duke of Wellington said, Marlborough's gifts. To these he added the serenest intrepidity and the most imperturbable self-possession. His qualities as a military diplomatist seconded his strategy, and were not less indispensable to the generalissimo of a discordant and fractious coalition. No general ever more completely clipped the wings of Victory. This was the more remarkable because he commanded armies made up of motley materials, and accustomed to defeat, against the armies accustomed to defeating them. The confidence with which he attacked at Blenheim, and the decisiveness of the result, are among the most striking things in military history. The result of his last battle, Malplaquet, was less decisive, though the fault was not his, but that of his allies. Yet his career of conquest was not arrested: he afterwards forced the lines of Bouchain; and had not Mistress Abigail crept, in the interest of the Jacobites, to the ear of the fatuous Anne and wrought his fall, with that of the patriotic party, it is not impossible that he might have entered Paris, and it is morally certain that he would have given the French monarchy such a blow as could hardly have failed to alter the course of history.

Macaulay has failed, but Lord Wolseley does not fail, to appreciate the importance of the part played by Marlborough in the Revolution of 1688. James had an army on foot strong enough to cope with the Dutch invader had it remained true to him. And apparently it might have remained true but for the secession of Marlborough. Marlborough and his wife also rendered William a great service by drawing over to him the Princess Anne. James, in his agony of rage, cried, "I must make examples, Churchill above all; Churchill whom I raised so high. He, and he alone, has done all this. He has corrupted my army. He has corrupted my child. He would have put me into the hands of the Prince of Orange but for God's special providence." The last assertion was a mistake. The majestic intriguer would never have been guilty of such an indecorum.

In these two volumes Lord Wolseley gets only to the death of William III. and the eve of the war of succession. The day of Marlborough's glory, the theme on which Lord Wolseley would be most interesting, is yet to come. We have here nothing more in the military way than the drooping laurels of Sedgemoor, the melancholy trophies of an Irish campaign, and displays of ability in subordinate command on the Continent, which, however, were the earnest of greater things to come. The day which is not that of Marlborough's glory, the sun of which breaks fitfully through dark clouds of dishonor, is the present subject, and in dealing with it the impartiality of the biographer is sorely tried. It is not true, however, that, as some of Lord Wolseley's critics seem to have thought, he whitewashes his hero. Again and again he speaks of Marlborough's conduct in language of the strongest reprobation; and in some cases where we should ourselves hesitate to condemn. He is right in making allowance for the moral standard of the age. Great allowance assuredly must be made for the moral standard of the age in the case of a poor, extremely handsome, and most fascinating youth, thrown among the men and women of the court of Charles II. In respect of social morality, the worst thing, perhaps, that can be said of Marlborough is, that he accepted the patronage of James when James had seduced his sister. Licentious intercourse with women probably never presented itself to his mind as wrong. To be caught in Lady Castlemaine's bed-chamber would be regarded by the circle in which he lived as a feather in his social cap. That he was "kept" by a woman is a flourish of Macaulay's pen. He was so far better than his companions that he did not drink or gamble. Nor, if in that slough of public corruption he shared illicit gains, was he so much to blame as he would be if he did the same thing now. The foulest of all illicit gains, that which was made by the traffic in prisoners after the suppression of Monmouth's rebellion, apparently he did not share. That he was avaricious is undeniable. So, unfortunately, was the wife of his bosom. But Macaulay has exaggerated this feature of Marlborough's mixed character, as he exaggerates every feature of every mixed character, for the purpose of his chiaroscuro. It is amusing to see how the great historical rhetorician makes everything work into his theory. The young adventurer whose beauty, charm of manner, and social reputation would have won for him the hand of the richest heiress of the court, marries a penniless girl for love. "He must have been very desperately in love," says Macaulay, "not to marry for money." Of course he was, and that he should have been so desperately in love with a penniless beauty proves that money, though he coveted it, was not mistress of his soul. So when Macaulay says that Sarah was "the one human being who was fervently loved by that cold heart," we must ask what proof better than fervent love there can be that the heart is not cold.

Marlborough chose his wife for her beauty, which matched his own; but when her beauty faded, his love did not lose its warmth. His devotion to her remained to the end of his life as passionate as it had been on their wedding-day. Nor was her love of him less, though the violence of her temper gave him many a bitter hour and probably had not a little to do with his worst departure from the path of honor; for her disappointment at her position under William and Mary probably helped to draw him into his intrigues with the exiled King. When she was his widow and a ducal suitor sought her hand, her answer was that not even if she were still young enough for marriage would she allow any man to share a heart which had once belonged to the Duke of Marlborough. One day, in a fit of rage, she cut off the beautiful tresses which were Marlborough's delight, and threw them where he would be likely to light upon them. He did light upon them, and at his death they were found laid up among the cherished treasures of the victor of Blenheim. Macaulay might let alone this redeeming story of affection amidst all the impurity and roguery of the age.

The three great counts in the indictment against Marlborough's character are his desertion of his patron James II., his correspondence with James while he was in the service of William, and his betrayal of the Brest expedition. In the first of these cases his conduct was cynical and savored of the generation of Shaftesbury and Sunderland; but we cannot say that it was vile. James had conferred favors on him, but he, at the battle of Sedgemoor, in which his capacity supplied the defects of the incapable Feversham, had rendered most important service to James. So far they were quits. It may be added that the favors of a king, being conferred at the public expense, can hardly be held to cancel the claims of public duty. To say nothing of constitutional principle, for which Marlborough, who, if he was anything except a soldier, was a courtier, probably cared little, it was impossible for a man of his sound sense to adhere to such a fool as James and such fanatics as James's priestly guides in their fatuous and ruinous career. Whatever of patriotism there might be in Marlborough would revolt against subserviency to France. Nor can we blame him for having masked his design from the king, though, as he was in immediate attendance upon James's person, the process involved profound deception. It would have been absurd to incur suspicion which would have exposed him to arrest. It does not seem that James had taken him into his political councils, while, by refusing to turn Roman Catholic, Marlborough had given practical notice of his independence.

Lord Wolseley, looking at the matter from a military point of view, discusses the charge which might have been brought against Marlborough of desertion. But in this case the military question was lost in the political necessity. We should no more think of arraigning Marlborough as a deserter for going over to William than we should think of arraigning him as a horse-stealer if he had ridden off on a regimental horse. In his letter of explanation to James he states his motive to have been his attachment to the Protestant religion. It is difficult to believe that religion was an influence paramount with so thorough a man of the world, and we are inclined, in Marlborough's case, as in those of many ardent Protestants of the period, to take Protestantism in a political sense. Yet Marlborough seems not only to have been a firm believer in Providence, but to have sincerely valued the ordinances, at least, of religion. He spent a part of the night before Blenheim in prayer, and always before going into battle received the sacrament. He had, however, another motive for secession which both Macaulay and Lord Wolseley have failed to notice. His wife had by this time acquired a complete ascendancy over the feeble mind of the Princess Anne, whose favor, if she became Queen, opened a splendid vista to his ambition, while her chance of succession to the crown, otherwise than by a revolution, was extinguished by the birth of a son to James II. In his subsequent double dealings it was suspected by the Jacobites, at least, that his real object was, not to restore James, but to get rid both of William and James, and place Anne, as a Protestant and an Englishwoman, on the vacant throne.

Marlborough's secret correspondence with the Court of St. Germain, when he was in the service of William, can neither be defended nor excused without disloyalty to morality and honor. His motives on any hypothesis were manifestly personal, not public. He and his wife had not gained so much by the Revolution as they had expected. He wished to make himself safe in the event of a restoration of the exiled dynasty, which the unpopularity of the foreign deliverer seemed at one time to portend. If he had the more ambitious aim which the Jacobites suspected, that aim still was purely personal. The only palliations of his conduct are the number of his associates in infamy and the low standard of public mo-

rality in that age. That he should have been employed again after the discovery of his treachery is the highest proof of William's magnanimity and of his noble preference of the public service to his own interest and feelings. Too true, though couched in rugged verse, was the judgment of Defoe:

"We blame the King that he relies too much
On strangers, Germans, Huguenots, and Dutch,
And seldom does his great affairs of state
To English councillors communicate.
The fact might very well be answered thus:
He has so often been betrayed by us,
He must have been a madman to rely
On English gentlemen's fidelity.
For (laying other arguments aside),
This thought might mortify our English pride,
That foreigners have faithfully obeyed him,
And none but Englishmen have e'er betrayed him."

Worst of all is the betrayal to the French Government by a British soldier of the intended attack on Brest, which led to the failure of the expedition and the death of its gallant chief. Lord Wolseley pleads that Marlborough was not really responsible for the disaster because he was not the first to give the information. It appears, however, that he gave it as soon as he knew the destination of the force.

"It is but this day that it came to my knowledg what now I send you; which is that the Bomb Vessells and the twelve regiments now encamped at Portsmouth, together with the two Marine Regiments, are to be commanded by Talmach, and are designed to burn the harbour of Brest, and to destroy the men of war there; this would be great advantage to England, but no consideration can, or ever shall hinder me from letting you know what I think may be for your service, so you may make what use you think best of this intelligence, which you may depend upon as exactly true" (vol. ii., p. 313).

Suppose Marlborough had been anticipated by another traitor, how much would that do to purge his honor? If two officers in Lord Wolseley's army had betrayed to the enemy his plan of attack at Tel el-Kebir, would he not have sent them both before a court-martial, though the information of the second might have happened to come too late? Even if we suppose Marlborough to have known that the information given by him would come too late, and by sending it he would only gain a false credit for infamy, would this exonerate him or even much diminish his turpitude in the eyes of any man of honor? Nothing can efface this stain; apologists only call attention to its blackness. They had better let it alone and allow it to be lost, as far as possible, in the blaze of Marlborough's glory.

An infinitely less serious charge is that of illiteracy. Against this Lord Wolseley would fain defend his hero. The facts, we fear, are against him. Here is one of Marlborough's letters to Blaythwait, secretary of war:

"For Mr. Blaythwait, Secretary att War, att his house neer the Horse Guard, London.—Maestrich, May 25th.—SIR.—I have not heard from [you] sense I left England, which I hope is ocationed by your not knowing how to direct your's to me. If you will call at my lodgings, my wife will lett you have the same direction she has for writing. I desier you will constantly lett me have what passes in Ireland. I must desier you will give the enclosed to my Lord Portland, there being own in it for the King. I desier you would send me over a copie of the oath that Monsieur Schonberg gave to the officers about ther never taking nor giving money for ther employment, because I am resolved to give the same oath here. I goe tomoroe for Boldnecke, and from thence to some other guarisons, to draw out six regiments, the other four not yett being ready to march.—I am, sir, your friend and servant, MARLBOROUGH."

The age was one of unsettled orthography no doubt, but not of such spelling as this amongst tolerably educated men.

Soldiers and men of action generally, when they take up the pen at all, usually write with verve and freshness. Cæsar's Commentaries are the type of military style. The vigor and animation of Lord Wolseley's style are such that we can easily overlook a few literary slips which have been pointed out by critics. Whenever war is his theme we feel that he is a master of it, that his descriptions are sure to be true, and that his ardor, when he speaks to us of the raptures of the battle, is unfeigned. But of these excellences we shall get the full benefit only when we come to the series of grand campaigns and stirring battle-pieces with which the next volume will open.

RECENT POETRY.

LONDON is prolific, of late, in a type of poetic genius for which the following recipe has lately been given in *Truth*: "Half educate a vain youth at Oxford; let his hair grow; dip him into erotic French literature; add one idea; chop it small; give a grotesque name; then serve up as a rival to Milton, Sheridan, and Shakspere." The *Athenæum*, usually well informed, though speaking lately of "the two thinkers, Thoreau and Walden," goes still further, and remarks of this flock of youthful bards in London that they are constantly discovering one another. The most questionable feature of their fame, however, is not this mutual discovery, but the very insecure basis on which it is apt to rest. The men brought to light are not suffered to stand upon their poetic work alone, but appear in the light of chromo-poets, who must have some private romance to give them color; it is urged in their behalf that they have begged about the streets, that they have become monks, that they have been more or less insane, that they have spent some years in a hospital. A great many persons have lost their wits without poetic madness, and have wasted their substance without any lofty soarings; so that the stress laid on such things awakens suspicion, like the recurring burglaries which remind a doubting world that some second-rate actress has diamonds to lose. The worst result is that, under these beguiling influences, we Americans have reverted for a season to that meek and deferential attitude from which Emerson and Hawthorne for a time rescued us. Any one thus advertised in London finds at once somebody to lecture about him in American universities; and whole cities are temporarily modified by his influence.

Those who lament what they find discouraging in the present aspect of English poetry may well find some comfort in the thought that, half a century ago, there was just the same solicitude. John Sterling, himself a poet of fine and elevated type, wrote thus in 1841: "It is true, no doubt, that what new poetry we have is little cared for; but also true that there is wonderfully little deserving any honor. Compare our present state with twenty years ago, when Wordsworth, Byron, Shelley, Keats, and Scott, the novelist, were all vigorously productive." Yet Tennyson and Browning were already rising to the zenith, and Swinburne, Rossetti, and Morris—to speak of London bards alone—were yet to come. Between that time and this, what stars and starlets have risen and set. Who now remembers the Shaksperian quality that was found or fancied in Alexander Smith; or how Sainte-Beuve wrote of Edmund J. Armstrong, "His young star will continue to shine before the eyes of all who study English poetry"? When Coventry Patmore comes forward to discover Francis Thompson, it is the rediscovery of Coventry Patmore that excites surprise; he was generally supposed to have died long since, like his transitory fame. The very complaints we make against the current poetic whims are much like those which were made against the earlier ones. The dedication of a serious volume "To Sissie Le Gallienne" is not much sillier than Tennyson's "O, Darling room, my heart's delight," which was wisely suppressed in later editions. The "affected archaism" which Lord Houghton admitted to be a defect in Leigh Hunt and his friends is conspicuous on every page of William Morris, not to speak of the younglings, and is manifest to the eye in the imprints of the latest poet-publishers, Mathews & Lane.

Dr. Richard Garnett, more than most Englishmen, retains health and vigor, even amid this phase of sadness. In his 'Poems' (London: Mathews & Lane; Boston: Copeland & Day) he has sometimes a touch worthy of Shelley, as in this (p. 18):

EVEN-STAR.

First-born and final relic of the night,
I dwell aloof in dim immensity;
The gray sky sparkles with my fairy light;
I mix among the dancers of the sea;
Yet stoop not from the throne I must retain
High o'er the silver sources of the rain.

Vicissitude I know not, nor can know,
Yet much discern strewed everywhere around;
The ever-stirring race of men below
Much do I watch, and wish I were not bound
The chainless captive of this lonely spot,
Where light-winged Mutability is not.

I see great cities rise, which being hoar
Are slowly rendered into dust again,
And roaring billows preying on the shore;
And virgin isles ascending from the main;
The passing wave of the perpetual river;
And men depart, and man remaining ever.

The upturned eyes of many a mortal maid
Glass me in gathering tears, soon kissed away;
Then walks she for a space, and then is laid
Swelling the bosom of the quiet clay.
I muse what this all-kindling Love may be,
And what this Death that never comes to me.

Though Dr. Garnett's book bears the imprint "London and Boston," yet, inasmuch as the printing was done abroad, we suppose that there is no copyright on the publication. Certainly we should all wish to see the international copyright law strained a little, if necessary, for the benefit of an author who writes a sonnet like the following (p. 132):

TO AMERICA.

[After reading some ungenerous criticisms.]

What though thy Muse the singer's art essay
With lip now over-loud, now over-low?
'Tis but the augury that makes her so
Of the high things she hath in charge to say.
How shall the giantess of gold and clay,
Girt with two oceans, crowned with Arctic snow,
Sandalled with shining seas of Mexico,
Be pared to trim proportion in a day?
Thou art too great! Thy million-billowed surge
Of life bewilders speech, as shoreless sea
Confounds the ranging eye from verge to verge
With mazy strife or smooth immensity.
Not soon or easily shall hence emerge
A Homer or a Shakspere worthy thee.

The publications of the young firm of Stone & Kimball (Cambridge and Chicago) are so attractive as to merit especial commendation and in fact to form a new era in the external dress of American poetry. There is visible a frank imitation of Mathews & Lane; but, after all, it is only superficial, and the selection of authors is carefully made. Gilbert Parker's 'A Lover's Diary' is disappointing; indeed, a whole book of sonnets is always so—sonnets should be the occasional spice of a volume, not its main repast. These sonnets, moreover, are in the irregular Shaksperian form, while modern taste has trained itself to the Italian sequence of rhymes. Mr. Hugh McCulloch, jr., in 'The Quest of Heracles, and Other Poems,' has risked his fate upon the Greek legend, a thing now so overdone that it needs the vigor of Michael Field to save it from the charge of languor. In some of his lyrics, as "A Requiem," we have a fresher and more varied charm. 'When Hearts are Trumps,'

by "Tom Hall," is full of excellent fooling, as piquant as the best work of the kind from London, and with more good nature. Mr. George Santayana also yields to the sonnet-indulgence, and his poems are almost always sad ('Sonnets, and Other Verses'); there is a distinct impression of immaturity, and yet of an underlying earnestness of feeling and imagination which imply a promise that is rare in a first volume. The closing and longer poem, "Lucifer," is an exceedingly strong and original study, not quite worked out.

Mr. Hamlin Garland's 'Prairie Songs' must carry a little disappointment to those who were struck with the fresh vigor and strong local coloring of his 'Main-travelled Roads,' and who regret that he—like all the type he represents, like Bret Harte and Joaquin Miller, for instance—apparently made his best mark at first, and shows no power of growth. These poems are full of valuable material, they carry the very flavor of the upturned furrow; yet the trace of Whitman and Miller is on them all, they are often strained and turgid and, so to speak, over-dressed. It is little that Mr. Garland says "fartherest" (p. 163), and says of the snow, "I saw it lay" (p. 162). These things are trifles—Emily Dickinson took far greater liberties with the Queen's or the President's English; but compare her poem on the "Blue Jay" with Mr. Garland's, and see which has the vigor and the grip. Mr. Garland even insults this bit of pure American life by one of the worst of Whitmanisms, the interlarding of foreign words, and calls the jay an "emigre," without an accent—whatever that may mean.

Mr. Grant Allen, who has put in a bid for second prizes in a good many directions, but without succeeding in any, now sends forth a volume of verse, not the "sweet Spenserian" of which we used to hear so much, but of sub-acid Spencerian, which is a very different thing. Were a poet to write of science, the men of science would hold him to a strict account as to the smallest laboratory precepts; but when a man of science—if Mr. Allen really counts among that class—writes poetry, he troubles himself very little about small points of art, and rhymes "kisses" with "tresses," "quarrel" with "coral," and "barter" with "Montmartre." Such blemishes occur freely in the volume called 'The Lower Slopes.' Comparing the verses about a moth, "Only an Insect," with Mr. Carman's fine and thoughtful poem on the same theme, one sees at a glance the difference between the poetic and unpoetic types of mind. The best thing in the book, its searching suggestion (p. 73) of the horrible realities lying beyond the gayeties of the Jardin Mabille, conveys a moral which has probably never yet been brought home to Mr. Allen—the extent, namely, to which he, and such as he, have laid the foundation for precisely those horrors by their persistent treatment of every woman as if she were only a tolerably intelligent kitten (p. 26):

> "For a man, he tries
> And he toils and sighs
> To be mighty wise
> And witty,
> But a dear little dame
> Has enough of fame
> If she wins the name
> Of pretty."

This he fortifies yet farther (p. 27) by the comforting and polygamous doctrine:

> "I hold that heart full poor that owns its boast
> To throb in tune with but one throbbing breast.
> Who numbers many friends, loves friendship most;
> Who numbers many loves, loves each love best."

After this, what remains but Mabille?

It is a question whether to take pleasure or pain in the fact that the most really enjoyable of all these contributions from Messrs. Stone & Kimball's young poets has for its birthplace neither England nor the United States, but that Canadian region, dumb until lately, but to whose rising literature we have more than once borne witness. Mr. Bliss Carman's use of his own early local coloring is at its best in 'Low Tide on Grand Pré,' and the breadth and mystery of that landscape of lonely distances and colossal ocean tides are fully rendered in his verse. He has that lyrical note and that power of imagination which lend to his poetry a haunting quality—a trait sure to secure a permanent charm beyond all mere wit and wisdom. It includes, of course, an ear for poetic names. The new localities he embalms for us—Blomidon, Arrochar, the Ardise hills, Martock, and Menalowan—are all names made for poets or by poets, it makes little difference which; but they are as valid and permanent, if rightly improved, as Tweed and Yarrow. The poem which, perhaps, strikes the deepest note is "Pulvis et Umbra," suggested by a gray moth coming in from seaward and leaving dust upon the poet's fingers. The most condensed in its vigor, with most of what Mr. Carman elsewhere calls "the valor of the North," is this pair of verses (p. 55):

> A SEA-CHILD.
>
> The lover of child Marjory
> Had one white hour of life brim full;
> Now the old nurse, the rocking sea,
> Hath him to lull.
>
> The daughter of child Marjory
> Hath in her veins, to beat and run,
> The glad indomitable sea,
> The strong white sun.

One thing which leads to the belief that Mr. Carman's merits may be partly those of his early surroundings is the fact that Mr. Duncan C. Scott's 'The Magic House, and Other Poems' (Ottawa: Durie) shows some of the same fine qualities. He also reveals an exceptional dramatic faculty in the poem "At the Cedars"—a lumberman's tragedy—and turns to an exquisite mood of meditative thought and fine expression in his poem on "A Country Churchyard" (p. 26):

> "This is the acre of unfathomed rest:
> These stones, with weed and lichen bound, enclose
> No active grief, no uncompleted woes,
> But only finished work and harbored quest,
> And balm for ills;
> And the last gold that smote the ashen west
> Lies garnered here between the harvest hills."

It is in such volumes as Mr. Carman's, Mr. Scott's, and Mr. Santayana's that the hope of our cis-Atlantic poetic literature lies, for they differ from the young London poets in being unhackneyed, and from Mr. Garland and his kind in showing enough of cultivation to avoid that note of provincialism which still hangs around the whole school of dialect-writers. Dialect, like slang, can be endured as flavoring only—it soon grows wearisome if offered as food. Burns does not tire us, but Allan Ramsay does; James Whitcomb Riley can take us "back to Grigsby's station" with him, but when William Allen White tries the same key in "The Exodus of Elder Twiggs" it seems flat. Mr. White and Mr. Albert Bigelow Paine are joint authors of 'Rhymes by Two Friends' (Fort Scott, Kansas: Izor), of which a friend who writes the introduction says, that "they have in no way offended the Kansans' idea of poetry." This makes one feel that the nation is safe in their hands. Yet there is almost always in these defiant border books a note which betrays essential weakness, in the fine names they give their heroes and heroines; thus, in these 'Rhymes' the persons celebrated in the most serious poem are not called John and Susan but Gustave and Emilie. In somewhat the same way, Mrs. Julia Ditts Young, whose poems are not in any way objectionable, spoils their flavor from the outset by taking a motto from Stevenson, in which he speaks of "a nightingale in the sycamore" as a necessary part of poetic housekeeping. But the book is called 'Thistle-Down' (Buffalo: Paul), and do nightingales really sing in Buffalo? On the whole, we prefer a little dingy book like 'Skipped Stitches,' by Anne J. Granniss (Keene, N. H.: Darling), which is written, it appears, by an author who herself worked in a mill and knows what she means by "Songs and Burred Needles," though we do not. She at least offers no nightingale on the doorstep.

When we turn to the writings of more highly cultivated authors, we sometimes find that, as in the case of Mr. E. F. Fenollosa's 'East and West: The Discovery of America, and Other Poems' (Crowell), the experience of two continents has turned largely to effervescence in the brain. There is doubtless some thought behind them all, but the result is weariness to flesh and spirit. Certainly there is in them no such glut as the author deprecates (p. 42):

> "O dance of the dishes! O pulse of the purses!
> O whirlpool of wishes! O chaos of curses!
> O hybrid hypocrisy of high-bred democracy!
> O self-contradictions of pious convictions!
> O mental congestions of insoluble questions!
> Are there no panaceas for a glut of ideas?"

Mosse MacDonald, whose name is new to us, in his 'Poems' (London: Innes), is, like most poets new or old, more enjoyable as he is least ambitious; more when he sings of maidens than when he discourses of Iona. A modern and spiritualized Herrick could scarcely do better than this (p. 37):

> "Virgins, laugh no more, but weep
> For Idonea, fall'n asleep:
> Winter winds have ceased to stir,
> All the world wears snow for her.
>
> "Cold, sad world, these saints so free
> Tarry little space in thee!
> Their true home is God's fair land.
> None can take them from His hand.
>
> . . . . . .
>
> "Who this star of virgins lit
> He alone was worthy it;
> He has touched the sleeping maid,
> She has followed unafraid.
>
> "We will don the mail of light
> Each whom Love has made a Knight,
> Raising eyes, however dim,
> For Idonea, unto Him."

In Mr. Robert Bridges's 'Humours of the Court: A Comedy' (Macmillan), we find little that is comic and not much that is musical. Mr. Gleeson White's 'Book-Song' (New York: Armstrong) gleans after Mr. Brander Matthews, and is more miscellaneous; many people have written about books, producing verse which is hardly worth putting into books. It is this same waywardness which most damps the unusually high hopes otherwise to be entertained from the volume which has so arrested attention in London, 'Poems by Francis Thompson' (London: Mathews & Lane; Boston: Copeland & Day). It is discouraging to open (p. 42) upon

> "Thy mists enclip
> Her steel-clear circuit illusions,
> Until it crust
> Rubiginous
> With the glorious gales of a glowing rust.'

And yet Keats had sometimes dithyrambic whims like this; and certainly Mr. Thompson has far more in common with Keats than with "the mob of gentlemen who write with ease" in the current Franco-Cockney idiom of London verse. Mr. Thompson has wonderful phrasing, like Keats, exquisite fancies, high uplifts; and his love-making has a refined beauty which equals Rossetti at his best. Rossetti's summary of the beloved woman

> "Whose speech Truth knows not from her heart,
> Nor Love her body from her soul,"

is not carried to a point more high and exqui-

site than when Thompson says of the object of his love (p. 9):

> "Whose body other ladies well might bear
> As soul—yea, which it profanation were
> For all but you to take as fleshly woof,
> Being spirit truest proof."

Again he says (p. 23):

> "All which makes other women noted fair,
> Unnoted would remain and overshone in her.
> How should I gauge what beauty is her dole
> Who cannot see her countenance for her soul,
> As birds see not the casement for the sky?
> And as 'tis check they prove its presence by,
> I know not of her body till I find
> My flight debarred the heaven of her mind."

These are glimpses of that fine style familiar to English poets in the seventeenth century, but now almost lost to sight; nor did that century produce anything finer. Yet perhaps it is not strange that the one poem in the volume which has been oftenest quoted is not among these subtleties, but brings to us Wordsworth —with a difference. It shows a range of gifts which makes Mr. Thompson an interesting, but not yet an altogether hopeful figure, since his impulses are wayward, like his life. This is the poem just mentioned, omitting some verses (p. 65):

DAISY.

> Where the thistle lifts a purple crown
> Six foot out of the turf,
> And the harebell shakes on the windy hill,
> O the breath of the distant surf!—
>
> The hills look over on the South,
> And Southward dreams the sea;
> And with the sea-breeze hand in hand
> Came innocence and she.
>
> Oh, there were flowers in Storrington
> On the turf and on the spray;
> But the sweetest flower on Sussex Hills
> Was the Daisy-flower that day.
>
> Her beauty smoothed earth's furrowed face!
> She gave me tokens three:—
> A look, a word of her winsome mouth,
> And a wild raspberry.
>
> She went her unremembering way,
> She went and left in me
> The pang of all the partings gone
> And partings yet to be.
>
> Still, still I seemed to see her, still
> Look up with soft replies,
> And take the berries with her hand,
> And the love with her lovely eyes.
>
> Nothing begins, and nothing ends
> That is not paid with moan;
> For we are born in others' pain
> And perish in our own.

Man and Woman: A Study of Human Secondary Sexual Characters. By Havelock Ellis. Illustrated. [Contemporary Science Series.] London: Walter Scott; New York: Scribners. 1894.

That tiresome little egotist, Marie Bashkirtseff, refused to claim for her sex an utopian equality with the opposite sex, "because there can be no equality between two such different beings as man and woman." Her grumbling arose from the fact that personally she was a woman, "whereas I have," she said, "only the skin of one." Mr. Ellis's comparative study makes havoc of accepted notions as to the difference between the sexes, and, while not destroying that difference, results on the whole in a great levelling of natural endowments. Man's boasted superiority in many particulars disappears, and excellences which he condescends to impute to woman are strangely shown to be rather his own property. Larger he is, and stronger, as a rule, but his skeleton is not always distinguishable from a woman's, and his pelvis tends to approximate hers. In measurements of the living body the surest sexual discrimination is in the girth of the female thigh. The male brain is universally heavier than the female, and upon this physiological fact much of man's lordship rests; but Mr. Ellis shows that, proportionately to the size of the rest of the organism, woman's brain is as heavy if not rather heavier. Stronger and brawnier as he is, she surpasses him in endurance of pain, bears amputations better, rallies more certainly from zymotic diseases, has greater longevity after the age of sixty-five.

On the other hand, the available evidence tends to show that men have a keener and more delicate sense of smell, are more sensitive to faint color, surpass women in rapidity and precision of movement, and are perhaps more deft in manipulation. Regarding the artistic impulse, "there is thus a certain justification of Schopenhauer's description of woman as the unæsthetic sex." In the moral sphere, man is by nature franker and more truthful. "The method of attaining results by ruses (common among all the weaker lower animals) is so habitual among women that, as Lombroso and Ferrero remark, in women deception is 'almost physiological' "; Mr. Ellis remarking, for his own part, that "it is inevitable, and results from the constitution of women, acting in the conditions under which they are generally placed." To the seven causes which these Italian authors assign for dissimulation, Mr. Ellis adds another, viz., compassion: "An exaggerated desire to avoid hurting or shocking others is one of the most frequent causes of minor dissimulations, and works more powerfully in women than in men." Finally, "the crimes of women are usually more marked by cruelty than those of men."

Mr. Ellis's method is purely scientific and not a little original, and is fortified by his well-known sociological researches. He candidly points out from time to time the slenderness of the basis of induction in a field where observation on a large scale is difficult and where much remains to be observed. He constantly refers for comparison to the infant on the one hand and the ape on the other, with a general collocation of woman with the infant, but by no means to her disparagement. "The young anthropoid is comparatively human in character, the adult ape is comparatively bestial in character"; and so "Man starts in life with a still greater portion of human or ultra-human endowment, and to a less extent falls from it in adult life, approaching more and more to the Ape." "We might say that the fœtal evolution which takes place sheltered from the world is in an abstractly upward direction, but that, after birth, all further development is merely a concrete adaptation to the environment, without regard to upward zoölogical movement." What woman illustrates, therefore, is not arrested development, but racial progress. "It is open to a man in a Pharisaic mood to thank God that his cranial type is far removed from the infantile. It is equally open to a woman in such a mood to be thankful that her cranial type does not approach the senile."

One can but admire the impartiality of Mr. Ellis's study, which is replete with curious physiological and psychological information, and which deserves to be read and reread by every thinking man and woman. The greater "affectability" of woman (*i. e.*, her readier responsiveness to stimuli psychic or physical) and the greater variational tendency in man—such are the two grand divisions he allows, for whatever they may be worth:

> "We must regard genius as an organic congenital abnormality, . . . and in nearly every department it is, undeniably, of more frequent occurrence among men than among women. The statement of this fact has sometimes been regarded by women as a slur upon their sex; they have sought to explain it by lack of opportunity, education, etc. It does not appear that women have been equally anxious to find fallacies in the statement that idiocy is more common among men. Yet the two statements must be taken together. Genius is more common among men by virtue of the same general tendency by which idiocy is more common among men. The two facts are but two aspects of a larger zoölogical fact—the greater variability of the male."

Women will not complain of Mr. Ellis's conclusions:

> "The hope of our future civilization lies in the development in equal freedom of both the masculine and feminine elements in life."
>
> "A precise knowledge of the actual facts of the life of men and women forbids us to dogmatize rigidly concerning the respective spheres of men and women. . . . Only Nature can pronounce concerning the legitimacy of social modifications. The sentence may be sterility or death, but no other tribunal, no appeal to common sense, will serve instead."
>
> "It is safer to trust to the conservatism of Nature than to the conservatism of Man. We are not at liberty to introduce any artificial sexual barrier into social concerns. The respective fitness of men and women for any kind of work or any kind of privilege can only be ascertained by actual open experiment; and as the conditions for such experiment are never twice the same, it can never be positively affirmed that anything has been settled once and for all. . . . An exaggerated anxiety lest natural law be overthrown is misplaced. The world is not so insecurely poised."

Primitive Music. By Richard Wallaschek. Longmans, Green & Co. Pp. 336.

A Study of Omaha Indian Music. By Alice C. Fletcher and John C. Fillmore. Cambridge: Peabody Museum of American Archæology and Ethnology.

Until quite recently it has been the custom of musical historians to begin their volumes with Greek and Hindu legends regarding the invention of music by the gods. But it was inevitable that the scientific spirit of the age should at last reach this department too, and increasing attention is now being paid to the lines of investigation suggested by Darwin, Spencer, Engel, and others. It remained for Mr. Wallaschek to collect into one volume the principal facts scattered in books of travel regarding primitive music. How thoroughly he has covered the ground may be seen from the list of authorities referred to, covering twenty-three pages in small type. For this carefully compiled list alone scientific students of the origin of music and musical æsthetics would be under immense obligations to him, even if his own contributions were of less value than they are.

The first five chapters are given up to extracts from the works of travellers and anthropologists, describing the music and the instruments of primitive peoples on the five continents. It must be confessed that the more one reads this sort of evidence, the more sceptical one feels as to its value in most cases. We know what a small proportion of us are able to judge of and describe even our own music, and how violently most of us disapprove of any novelty or deviation from familiar lines in melodic intervals. Bearing this in mind, it is easy to see why travellers should so often disagree in their estimates of the music of primitive peoples, and why we must accept their statements with great caution. An expert's opinion would here be worth more than the reports of a hundred explorers; and even experts are liable to be led into error by preconceived theories and inattention to important details. It will be long before this chaos can be reduced to order, but in the meantime we must thank Mr. Wallaschek for bringing together the material and offering many valuable suggestions.

As regards the origin of music, he discards

both the impassioned-speech theory of Spencer and the bird-melody theory of Darwin, holding instead that the origin must be sought in a rhythmical impulse in man, arising from a general appetite for exercise of the organs. It has long been believed that rhythm is the first and oldest element of human music, and all the testimony collected by Mr. Wallaschek supports that belief. But while we may go with him so far, it is much less easy to accept his theory that harmony may be as old as melody. It may be true that Hottentots and New Zealanders have harmony in their music; but when we bear in mind how marvellously imitative some tribes are, we need to exercise extreme caution in accepting as original with them what they may have picked up from contact with Europeans. Mr. Wallaschek himself says, in speaking of the Hottentots: "It is worthy of note how quickly the natives learn songs and imitate those which they have heard from travellers. . . . Indian children, too, learn simple melodies in the Sunday-schools with the greatest ease."

Among other heterodoxies maintained by Mr. Wallaschek are the contention that the pentatonic is not the oldest of the scales; that there is no necessary connection between the minor mode and sadness, the major mode and cheerfulness; and that primitive vocal music does not always imply a poetic substratum, but often goes with meaningless words. While his argumentation is not always convincing, he shows at any rate that those questions are not as settled as they are usually supposed to be, and leaves the impression that probably many a literary battle will be fought over them in the future.

In the second work on our list, a brochure of 152 pages, we have, in part, the condition most desirable in investigations on primitive music, Prof. Fillmore being an expert in the theory of music, while Miss Fletcher, too, prepared herself for her part of the task by "ten years of constant study." She collected several hundred songs of the Omahas and other tribes of the same linguistic family, and submitted them to Prof. Fillmore for a scientific verdict. Here the conditions were obviously favorable for arriving at the truth, yet we fail to be convinced of the truth of Prof. Fillmore's inference, drawn from these songs, that the harmonic sense is universal, being shared by the Indians in a latent condition. No evidence is presented that the Indians used harmony of their own accord, but only that they accepted his harmonizations of their melodies, approving some in preference to others. His principal reliance was placed on Mr. Francis La Flesche, a (pure?) "Omaha Indian in the service of the Indian Bureau at Washington." This in itself is a suspicious circumstance, since Mr. La Flesche's harmonic sense may have been largely influenced by hearing our music, and the same is true of other Indians experimented upon, who have ceased to exist as a tribe and have long been under educational influences. While, therefore, it is interesting to hear that the Indians do take kindly to our harmonies (although we still have doubts on that point), we think that much more rigorous experiments would be needed to show that they have a "latent harmonic sense" except in the way in which a statue is latent in the marble. The Japanese have no harmony in their music, yet they soon learn to use and appreciate it; but we would not infer from this that our system of harmonies is "latent" in their melodies. The best authorities on Russian folk-song have protested against the harmonizing of Slavic folk-songs in our conventional way by which their exotic character is completely altered. How much more must this be true of Indian melodies. Prof. Fillmore has shown much skill and ingenuity in harmonizing ninety-two of these melodies (in the appendix), but it seems to us labor and ingenuity wasted. The result is more like Sunday-school songs than like wild Indian music.

Apart from this one point, there is a great deal to approve and admire in the joint work of Miss Fletcher and Prof. Fillmore. Of the interesting observations noted a few may be mentioned here: "Indian music seems to be out of tune to our ears conventionally trained to distinguish between the singing and the speaking tone of voice." "Baritone and mezzo-soprano are more common than the higher or lower classes of voices." Gradations of piano and forte are rarely attempted. "Words clearly enunciated in singing break the melody to the Indian ear and mar the music. They say of us that we 'talk a great deal as we sing.' Comparatively few Indian songs are supplied with words." This seems to us by far the strangest point observed by Miss Fletcher. Prof. Fillmore further notes that "major keys and major chords predominate in these songs, and that the Indian ear prefers a major chord, as a rule, at the close of a minor song." The rhythm is often so complicated that it is difficult to note it down. "I know of no greater rhythmic difficulties anywhere in our modern music than these Omahas have completely at command in their every-day music." The idea of vocal cultivation is entirely foreign to the Indian mind. Nor is beauty of tone to be thought of where the men sometimes sing loudly two hours at a time in the face of a strong wind and to the noise of big drum and rattles. On superficial acquaintance there seems to be more "sound and fury" than beauty in Indian music; but under proper circumstances Miss Fletcher was profoundly moved by it. Prof. Fillmore finally notes, as against the theory of Hanslick, that "these Omaha songs mean *feeling* to the Indian, in all cases."

Hans Sachs und seine Zeit. Von Rudolph Genée. Leipzig: J. J. Weber. 1894. Pp. 524.

EVERY one who is interested in German literature and in German music is looking forward to the great celebration of the four-hundredth anniversary of the birth of Hans Sachs, which is to be held next November in Nuremberg, and one of whose chief features will be the rendering of Wagner's "Meistersinger" by the foremost artists of Germany. The book before us is presented to the German people in the hope that it may arouse an interest in the great popular poet of a bygone age. The author does not pretend to make a contribution to the history of literature, but presents a picture of the culture of a well-defined and very important epoch, upon which Hans Sachs exerted a powerful influence. First he reproduces the Nuremberg of the sixteenth century, showing its relation to the Empire and the renown it had won for its art and industry, and especially for its group of mastersingers. Numerous illustrations of the buildings and fortifications and customs of the inhabitants, together with portraits of several eminent personages, are here introduced. Then begins the poet's biography proper, into which the author has woven some account of nearly everybody in whom Sachs was interested, and of nearly every event to which he turned his attention or about which he wrote. Any significant occurrence in Sachs's life is improved for a description of similar happenings in a general way. For example, when the author comes to speak of the poet's marriage, he describes briefly the bride, and then exhibits the marriage ceremony as conducted in the various classes of society, with the aid of some ten illustrations showing the dress worn by the brides and bridesmaids, according to their respective stations. In like manner, commenting on Sachs's poem, "Schembartlaufen," he shows that the occasion of it was the carnival of 1539, after which this particular amusement was abandoned. The origin of *Schembartlaufen*, its primitive political element, which had quite vanished at the time Sachs wrote; the way in which the contest was carried on, and the extravagant and fantastic costumes worn by the participants; the cause of its sudden end—are all passed in review. Sachs's numerous "Fastnachtspiele" lead to a good description of the rude stage and drama of his day.

An appendix contains several of the tunes to which the mastersongs were sung, the regulations of the Nuremberg Mastersingers, and several of Sachs's hitherto unpublished poems. The book, although popular in its nature, is prepared in a careful and scholarly manner, and cannot fail of its end. Tourists may well resort to it for information suitable for spectators of the coming celebration.

Reminiscences of the Great Mutiny of 1857-59, including the relief, siege, and capture of Lucknow, and the campaigns in Rohilcund and Oude. By William Forbes-Mitchell, late Sergeant Ninety-third Sutherland Highlanders. Macmillan & Co. 1893.

WE shall never know half the truth about the struggle to throw off the British yoke in India, for we can hear only ex-parte testimony. In Bernard Quaritch's catalogue No. 114 there are 272 titles of works relating to India, but not one of them touching at all upon the Mutiny is by a native. Next to such a Hindu witness, though *proximus longo intervallo*, is a book from the British ranks. Hence we wish Sergt. Mitchell had written even sooner. He was under fire less than six months, his first fight being at Lucknow, November 14, 1857, and his last the next spring at Bareilly, May 6. A battle before the latter city, another before Cawnpore, with an assault on Lucknow for the rescue of beleaguered women and children, and the subsequent capture of the same place, were the chief military exploits.

It was ten days after the India outbreak before the sergeant's regiment started from Dover on May 20. They sailed for China, but at the Cape their destination was changed. Their arrival at Calcutta was on the equinoctial day, and in the rebel region not till a month later. After leaving the army the writer set up a rope factory in Calcutta, and appears to be an Anglo-Indian still. The charm of the volume, and it is great, lies in personal experiences and anecdotes. Though the author was no teetotaler, we learn from him that tea or coffee, in extreme cases reinforced by a pill of opium, proved ten times better as a tonic and restorative than extra grog. A round match-box of salt in his haversack turned tasteless forage for his mess into dainty dishes. Like the present writer in the same region, he felt on the self-same day the bitter change of fierce extremes. Many fell with sunstroke, and, the night after, he was too cold to sleep. One Bell of his regiment, the most powerful man in the British army, perished in an athletic *tour de force* through overrating his

strength. One incident may encourage the rain-makers to bombard the heavens again when rain is needed. A very large quantity of powder which had been stored in a deep well accidentally exploded, and an immense cloud of black smoke was sent up in a vertical column at least a thousand yards high. This accident happened in cooking the mid-day meal. "It was followed in the afternoon by a most terrific thunder-storm and heavy rain which nearly washed away the camp" (p. 261). Mr. Mitchell is inclined to criticise British arms and tactics. British sword-blades were inferior in pattern to those of natives, as was evident in many hand-to-hand-encounters. Near battlefields, flies became multitudinous and roosted in the roofs of tents. "When the roofs were swept down, five basketfuls, each holding an imperial bushel, were carried out of a single tent."

In reading these Reminiscences the war of 1857 rises before us as a religious crusade. The Ninety-third Highlanders Mr. Mitchell declares to have been a Highland parish, minister and elders complete, with a regular service of communion plate, etc. (p. 52). Like Cromwell's Ironsides, they went into battle with the high praises of God in their mouths and two-edged swords in their hands. Their best fighter cried out from the 116th Psalm, Scotch version,

> "I'll pay my vows now to the Lord
> Before his people all,"

with every rifle shot or bayonet thrust. His victims were twenty. Not one life was spared. The Secundrabagh, the scene of slaughter, is to-day kept a ruin and is so to remain as its own monument. In what other war of recent times have no prisoners been taken? Giving no quarter was bad enough, but we read in these pages of far worse atrocities on the part of the British. Many English women and children were massacred in a prison and their blood dried on its floor (but Mitchell shows that they were not dishonored). The supposed murderers, whenever caught, were made to crouch in that slaughter-house and with their mouths lick clean each a square foot of that blood-soaked floor before being taken to the gallows. No torture was so horrible as this for Moslems, who view tasting blood as the worst of pollutions. The General who for four months enforced this blood-licking died soon, but his son was killed by a son of one of the defiled Moslems thirty years after. He had treasured up the wrong. The story of the spy Jamie Green we pity the man who can read without tearful eyes. The night before his execution he was put in charge of Sergeant Mitchell, and saved by him from being smeared, as was customary, with pig's fat to break his caste. His antecedents were beyond comparison more noteworthy than the career of Major André, as his rank and culture were higher. In the colleges at Bareilly and Roorkee he stood first; but as a cadet of the East India Company he was sent to serve under a sergeant of no education, who irritated and disgusted him by arrogance, insolence, and selfishness. Resigning, he was taken by the sovereign of Nepaul as his secretary during a visit to England. But let every one read this whole chapter.

BOOKS OF THE WEEK.

Austin, J. O. One Hundred and Sixty Allied Families. Providence, R. I.: John Osborne Austin. $10.
Baylor, Frances C. Claudia Hyde. Boston: Houghton, Mifflin & Co. $1.25.
Björnson, B. A Gauntlet: Being the Norwegian Drama En Hanske. Longmans, Green & Co. $1.50.
Boothby, Guy. On the Wallaby; or, Through the East and Across Australia. Longmans, Green & Co. $4.
Bower, Prof. F. O. Practical Botany for Beginners. Macmillan. 90 cents.
Corning, Dr. J. L. Pain in its Neuropathological, Diagnostic, Medico-legal and Neuro-therapeutic Relations. Philadelphia: J. B. Lippincott Co. $1.75.
Craddock, C. E. His Vanished Star. Boston: Houghton, Mifflin & Co. $1.25.
Denney, Rev. James. The Second Epistle to the Corinthians. [Expositor's Bible.] Armstrong. $1.50.
Dodd, Anna B. In and Out of Three Normandy Inns. Lovell, Coryell & Co. 50 cents.
Graves, C. E. The Wasps of Aristophanes. Cambridge: University Press; New York: Macmillan. $1.
Holt, Dr. L. E. The Care and Feeding of Children. Appletons. 50 cents.
Howell, Jennie M. A Common Mistake. The Merriam Co.
James, B. W. The Dawn of a New Era in America. Philadelphia: Porter & Coates.
Jeans, J. S. Trusts, Pools, and Corners. London: Methuen & Co.
Lee, Margaret. Divorce; or, Faithful and Unfaithful. Lovell, Coryell & Co. 50 cents.
Mead, Prof. W. E. Elementary Composition and Rhetoric. Leach, Shewell & Sanborn. 90 cents.
Merriam, Florence A. My Summer in a Mormon Village. Boston: Houghton, Mifflin & Co. $1.
Mitchell, Walter. Two Strings to His Bow. Boston: Houghton, Mifflin & Co. $1.25.

The Nation.

NEW YORK, THURSDAY, JUNE 14, 1894.

The Week.

THE defeat of the bill to repeal the ten per cent. tax on State bank-notes was the most conservative and wholesome vote taken in Congress since the repeal of the Sherman act. If it be true that Mr. Cleveland personally counselled members to vote against the repeal, on the ground that public opinion is not yet ripe for any radical change in our banking system, that is another of his titles to public confidence. The truth is that people are generally dissatisfied, as they ought to be, with the antiquated and hide-bound system of bank-note issues now existing. This system was designed for an entirely different state of things from that which now exists, and it did not even accomplish what it was designed for—the replenishment of the public treasury. It did accomplish a vast deal of good in a collateral way. It expelled chaos from our banking concerns, and that was a mighty gain. To open the door for the return of chaos simply because the system needs amendment, would be an enormous mistake. It would be like a respectable man going barefoot because one of his shoes pinched. What is wanted now is a scientific study of the whole question by a competent committee, who shall take evidence from all who are competent to give it, and sift it for general use. There is no objection to taking the evidence of Populists as well as of bankers on these terms and conditions. What everybody is striving for is the truth. We acknowledge that very few, if any, people who are busying themselves with this question have in view anything but the public good. We acknowledge, too, that many of those who differ from us more or less in this matter have brought important contributions to the solution of the controversy, and in this respect we especially commend the speeches of Mr. Warner of New York, Mr. Rayner of Maryland, and Mr. Harter of Ohio. Mr. Warner has brought together a large collection of facts, important to the issue in hand, which have not been previously compiled. His collection of the extemporized currency of clearing-houses and factories during the panic of last year is especially important, and these are all the better for being presented in facsimile.

Whatever danger there may be of this country's falling into the silver slough again is now distinctly traceable to the party that piques itself on being the party of sound money. Five Republican State conventions have lately been held, and they have vied with each other in the absurdity and peril of their financial planks. Maine and Ohio and Indiana go in furiously for the protection-free-silver combine, and Pennsylvania is for inflation any way to get it. The Kansas plank is a curiosity. It declares that "the interests of the producers of the country, its farmers and its workingmen, demand that the mints be opened to the coinage of silver, and that Congress should enact a law levying a tax on importations of foreign silver sufficient to fully protect the products of our own mines." This evidently means free coinage of silver without daring to say so explicitly. Characteristically enough, Senator Sherman comes out with a "hearty endorsement" of the Ohio platform, as "in line with the views I have always held on this question." Precisely so—views interchangeable with votes.

Senator Sherman prophesies smooth things about "an international agreement on this important subject," but no one knows better than he that such an agreement is farther off than ever. The wind-up of the latest German silver commission, given to the agrarians by Caprivi as a plaything to amuse themselves with for a while, shows how dim and far-off an event international bimetallism is. The greatest public service rendered by the commission, said the imperial secretary of the treasury in closing its sessions, would be in spreading the conviction that "serious difficulties attended the solution of the silver question." We did not need one risen from the dead, not even a resurrected silver commission, to tell us that. "The Government," added the sage secretary, "would examine all the proposals submitted to it, and would make those it regarded as feasible a basis for further consideration." Go on, gentlemen, getting up your little demonstrations of how to square the circle and invent perpetual motion, and when you succeed just let us know. Meanwhile, a great chance is offered the English bimetallists to show the stuff they are made of, by the *Investor's Review*, which undertakes to publish "the names of all holders of United States gold or sterling railroad bonds who are prepared to accept payment of their coupons in silver, just to encourage the rest."

Ex-Speaker Reed's recent deliverance on the silver question has proved a great surprise to the country. While the Republican leader in Congress has never been credited with thorough study of financial questions, he has made an excellent reputation. As Speaker in 1890 he successfully used his power to prevent the passage of a free-coinage bill in the House, and as the controller of the minority in the present House he resisted and defeated the disposition of such men as Burrows to have the Republicans keep silent and let the Democratic majority pass bad and positively dangerous measures. Most people, therefore, have set down Mr. Reed as sound on financial issues, and nobody supposed that he would "play second fiddle" to Henry Cabot Lodge by endorsing the latter's absurd plea for bringing England to terms on the silver question by bulldozing her on the tariff. The Republican editors have been so puzzled by his recent outgivings that many of them have kept entire silence, or contented themselves with saying that there must be some mistake in the report, as it was inconceivable that he should have uttered such nonsense. Some party journals, which are constrained to accept its authenticity, denounce the ex-Speaker's course in the roundest terms.

On the other hand, there are signs that Mr. Reed's scheme, or some similar piece of demagogy, may find a good deal of support among the politicians who run Republican conventions and make the party platforms. It is to the influence of the ex-Speaker's friends in the Ohio Republican State convention on June 6 that the "wobbling" outgiving on the silver question is ascribed. The McKinley men, who managed the convention and who want to keep the tariff issue to the front in the interest of their favorite for 1896, would not accept the full-fledged scheme for a tariff-silver "combine" which Reed advocates, but they had to yield so far as to adopt a resolution for "such a policy as will, *by discriminating legislation* or otherwise, most speedily restore silver to its rightful place as a money metal." As Congressman Burrows and the Detroit *Tribune*, which are influential in their State, endorse the Reed policy, it is expected that the Michigan Republicans will go at least as far as their brethren in Ohio. The growing demoralization of the party on financial issues is illustrated by the platforms of congressional as well as State conventions. Representative Grosvenor is perhaps the most prominent man in the Ohio delegation, and seems likely to succeed McKinley in the governorship. The first plank in the platform adopted when he was renominated the other day "demands the adoption of such legislation by Congress as will guarantee bimetallism and enlargement of the currency to at least forty dollars per capita." Grosvenor takes this plank from Quay, who had the Pennsylvania Republicans adopt it.

Quay got it from the Populist national platform of 1892, the only difference being that this called for $50, while he asks for only $40.

Maine and Minnesota are both in the northern tier of States, and both come into competition with Canada. But there is a marked difference in their attitude on the general issue of the tariff and the special question of Canadian competition. The Republican State Convention of Maine on June 6 condemned the Wilson tariff bill and the "vicious features" added to it in the bill now before the Senate, which "delivers nearly every industry of Maine into the hands of our nearest and most hostile rival, the Dominion of Canada." Governor Cleaves, who was renominated, in his speech of acceptance spoke particularly of free lumber, and asked how the men employed in Maine forests, on her rivers, and in her mills, cutting and preparing that product for market, can expect to find employment at good wages "when we invite a foreign province to furnish that product to us with their labor, and thereby paralyze our own lumbering interests." On the other hand, the Republican Governor of Minnesota, Knute Nelson, who will shortly be renominated, is a man who in the Fiftieth Congress voted for the Mills bill, and in his speech announcing his position declared his belief in free lumber and cheaper shelter—"cheaper because released from the heavy and unnecessary bondage of high-tariff taxes." The St. Paul *Pioneer Press* a few days ago declared that lumber ought to be free, in the interest of "cheap building material for all the vast prairie region of the West and Northwest," and ridiculed the idea that Canadian competition in wages could give us much trouble. Evidently the Republican stump speaker of Maine will not do for the longitude of Minnesota.

It is not surprising to learn that the rural delegates to the New York Constitutional Convention are objecting to the proposed separation of municipal from State and national elections. They claim that separate elections will not work well in the country districts in years in which only town officers are to be chosen, since the stimulus of State or national issues is necessary to "bring out the vote." That is to say, the cities must continue to be a sacrifice to politics in order that the rural vote may be got out. The cities have for years been made in the Legislature a sacrifice to the wishes and interests of the politicians from the country districts. These have legislated, not in accordance with the wishes of the inhabitants of the cities, but in accordance with what they thought would help party interests outside the cities. The cities have, in fact, been governed for years from Albany by legislators responsible only to constituencies who had no interest whatever in city affairs. The consequence has been that no matter how damaging may have been the results of such legislation, the legislators were safely removed from being called to account for it. To say that the cities must go on indefinitely in this way, is to say that "getting out the vote" in the rural districts is the all-important end of government, to accomplish which no sacrifice is too great. If that argument is to prevail in the Constitutional Convention, there can be no separate election amendment and no municipal home-rule amendment hoped for.

The fuss made in the newspapers about Croker's doings and goings would be inordinate but for the part he has played in city affairs since Tammany came into power, and the amount of knowledge of Tammany administration he possesses. But his knowledge is so great that we have marvelled much that the committee did not serve a subpœna on him before now. It seems to us that he is about the first witness they should have taken pains to secure. Nearly the whole Tammany income must have passed through his hands, and he must have been very familiar with its sources. The blackmail paid him, too, to secure immunity from hostile legislation, ought surely to have come within the purview of the investigation as explaining and illustrating the nature of the Tammany system. We say all this on the supposition, which we take to be well founded, that the committee can summon and examine any one they please who is presumed to be able to give information bearing on the matter in hand. His hasty departure for Europe, therefore, at the very opening of the racing season, does not surprise us. The wonder is that he did not go sooner. His object in being out of the country now, even if he should come back before the investigation is over, is doubtless to see what comes out before he submits himself to examination. This was undoubtedly his game when the Fassett committee was sitting. He came back when he knew what he should have to explain or deny. The exposures before the present committee may be such that his stay in Europe may be indefinitely prolonged, or they may be such that he can meet them by simple denial and forgetfulness. But the time of his departure—just as his horses are beginning to run—shows that he considers the situation serious.

The testimony thus far adduced in the police inquiry has agreed in fixing pretty definitely the rates of Tammany tariff on some forms of vice and other sources of revenue. Thus, the regular rate for a disorderly house is $500 "initiation fee" to the police captain, to be paid whenever a new captain is placed in charge of the district; $50 a month for the captain, usually collected through the ward detective, and something for the ward detective himself, the amount of which depends upon his personal ability as an extortionist. In addition to this tariff there is a contribution to the "Christmas present" of the captain, and sometimes something to the patrolman on the beat. Concert saloons, without licenses, pay $50 a month to the captain. The regular tariff for cafés with waitresses, selling liquor without licenses, runs from $15 to $25 a month. The regular pay to ward men from a liquor-saloon for the privilege of selling on Sunday is $5 a month. The regular pay to the inspector of the Excise Department, from saloons that have no licenses, is $5, as salve to his conscience for "overlooking" the fact. This is in addition to the $5 to the ward man for Sunday selling. The regular tariff for admission to the police force is $300. Tickets to Tammany "chowder parties," usually distributed among disorderly houses and liquor-saloons in batches of five, are $5 each, and it is "bad form" for any to be sent back.

We trust that the *Tribune* will give us some light about its custom of making a Christmas present of a basket of wine to Police Commissioner McClave. Was it sent regularly, and if so what was the motive? Had the sending of it anything to do with the election advertising, which is worth $20,000 a year to each newspaper securing it, which is bestowed by vote of the police commissioners, and which usually goes to the *Tribune*? It will be remembered that the late Elliott F. Shepard tried to get it on one occasion, and that he assured an advertising agent that, under proper pressure, it could be obtained for his religious newspaper, since the commissioners "are weak and will yield easily." The advertising agent, in the excess of his zeal, supposed the colonel to mean that he should offer the commissioners a rebate of $5,000. The *Tribune's* plan of a basket of wine—quality unknown—was much more economical than this, and seems to have been quite regularly successful. What was the quality of the wine? Was it the famous brand of American champagne which another Republican editor, late head of the Census Bureau, was wont to boom so industriously? Or was it Reich's famous *Nullum Vinum nisi Hungaricum*? We trust not, for the sake of McClave's stomach. The *Tribune* ought to explain this freely, for it is only a few days since it remarked of McClave that "unfortunately he does not enjoy a reputation in this community which entitles him to protest against a searching inquisition." Is the Hon. Whitelaw Reid in the habit of sending Christmas presents of wine to persons of doubtful reputation? We earnestly

trust that this community may be spared the shock of such a revelation.

The failure of the courts in Monroe County, Pa., to punish anybody for the lynching of a negro a few weeks ago is an ominous sign. The judge seems to have been in earnest, but the grand jury were in evident sympathy with the law-breakers and reported that they could find no one who was responsible. The explanation is found in the statement of a local newspaper, while proceedings in court were pending, that "there is apparently no fear on the part of the lynchers, and no one cares to see them punished." It is even suspected that there were lynchers or witnesses of the lynching on the grand jury itself. Worse still, this is not an isolated case of the condoning of such crimes at the North. Two negroes have been lynched by white mobs in Ohio within a year, but nobody has been punished or will be punished for the offence. New York, Michigan and Kansas are other Northern States in which lynch law has been invoked by whites against blacks in recent times, and the law of the land has proved helpless against the criminals. In all of these cases the difficulty has been the same—that public sentiment did not demand the punishment of the lynchers.

The full influence of last summer's panic on the immigration movement was not felt at once. The arrivals during the last six months of 1893 fell only a trifle short of the same period in 1892; and, although this comparison is somewhat impaired by the cholera scare of 1892, and the consequent check to immigration, the general results up to last year's close were not particularly striking. But, beginning with 1894, a very remarkable change in the volume of immigration developed. During the first three months of the year the immigrant arrivals decreased from 98,799 in 1892 and 71,640 in 1893 to only 38,278 in 1894. In April less than half as many immigrants arrived as in April, 1893, showing a still heavier rate of decrease. This decrease has been most heavy in the countries whence our most desirable immigrants are drawn. The movement from Russia during the year's four opening months was actually larger than last year's; Italy's immigration fell off barely one-half. But the movement from Great Britain and Ireland decreased from 33,624 in 1893 to 13,668 this year; the German immigration from 27,064 to 12,157; while that from Sweden and Norway fell from 15,932 to 5,218, a decrease of more than 66 per cent.

The disastrous smash of the New Zealand Mercantile Company, which finally drove Mr. Mundella out of the English cabinet, laid bare, at the judicial examination of the directors, an astonishing state of things. The board was made up, in good part at least, of honorable men of high standing, like Mr. Mundella himself, yet it had been, collectively, doing the most dishonorable things for years. It had borrowed on false pretences, issued new stock without notice to stockholders, and published misleading balance-sheets. All sorts of excuses were put forward by the men at whose doors these things were laid, all of whom protested that they were ignorant of the rascality and animated only by the most high-minded motives. Yet they could not deny their moral or legal responsibility for what had occurred. It was their business to direct, and if they did not or could not, they should have resigned from the board and not allowed their names to stand as a lure for the unwary. What the London *Times* said on the subject is of universal application:

"It is idle cant to pretend anxiety for the better distribution of wealth until we can devise means by which this preying upon people of small incomes can be put a stop to. It is idle to prate of thrift when the small investor has no guarantee whatever for the most ordinary honesty and sagacity in the conduct of his affairs. If we are to admit the mass of the nation to a share in the lucrative business now carried on by men of capital—and there is no other way to equalize wealth without sapping the foundations of industry—we must find some cure for this collective recklessness or dishonesty which is the curse of joint-stock enterprise."

The impossibility of imagining Mr. Gladstone in Lord Rosebery's place on Wednesday of last week is the best measure of the essential difference between the two men, and of their comparative fitness to lead the reforming party in English politics. Mr. Gladstone has had many popular ovations, but he never went out in the face of a Derby throng, to lead back his winning horse and be madly cheered by thousands of men in whom the coarser passions were running riot. The protests of the Nonconformists against a "horse-racing Premier" are already beginning to be heard, and more of them will be heard in the future. There is a Puritan strain in the great body of the Dissenters who have gone into the struggle for Welsh disestablishment and justice to Ireland, which may be narrow and prejudiced, but which is a factor not to be neglected. By Mr. Gladstone's leadership and by his austere public utterances and private life, these men were braced and nerved; but they will not long follow a man so much at ease in Zion as Lord Rosebery. He has already lost a good part of the moral enthusiasm which has so clearly marked and dignified the home-rule cause, and his rather defiant speech at Eton in defence of horse-racing will not win him back the support which he has alienated. If he maintains himself long in power, it will be by means of new political combinations and issues, and not by the backing of the chapel-going middle classes.

It needs but a single glance at the map of Central Africa to see that the Anglo-Belgian agreement signed at Brussels on May 12 is a direct blow to France. It is no secret that of late years the ambition of the directors of the French colonial policy has been to extend their Congo possessions to the Nile, and thus to acquire the rich province of the Bahr el-Ghazal, formerly governed by Lupton Bey. Up to this time, however, they have limited their action in this direction to repeated energetic protests against the extension of the Congo Free State north of the 4th degree of latitude, their exploring and treaty-making expeditions having been confined to the country between the Congo and the Niger valley. By the new treaty Great Britain leases to the Congo Free State all the territory lying between the watershed of the Congo and Nile basins and the Nile as far west as the twenty-fifth meridian, and to the tenth parallel in the north. This includes the province of the Bahr el-Ghazal and that part of the equatorial province of Emin Pasha which is to the west of the Nile. The greater portion of this latter province reverts to Great Britain on the death of King Leopold, but the lease of all that lies west of the thirtieth meridian, together with a strip of land twenty-five kilometres in breadth connecting this territory with the northern shore of Lake Albert, is "continued so long as the Congo territories, as an independent state or as a Belgian colony, remain under the sovereignty of his Majesty and his Majesty's successors." In return for this important concession the Free State leases to Great Britain its most northerly station on Lake Tanganyika and a strip of country twenty-five kilometres in breadth, connecting it with Lake Albert Edward, thus affording England direct communication between the Nile and her South African possessions.

This latest act in the partition of Africa is not a mere paper agreement, but rather a ratification of accomplished facts. An armed force of the Free State has already for some time been established at Lado on the Nile, the former seat of government of the equatorial province, while the English last winter took temporary possession of Wadelai, Emin's latest residence, thus reasserting, as the protector of Egypt, the claims of that country to the upper valley of the Nile. It is hard to predict with any confidence what will be the results of this action of the two powers. Certain provisions in the agreement would seem to indicate the prompt occupation by King Leopold of the ceded territory. But the French minister of foreign affairs says the lease is null and void, and that he is sending troops to resist its execution. This makes the situation look serious.

THE SUGAR SCHEDULE.

WHEN the Republican party bankrupted the Treasury with its pension largesses and turned the government over to the Democrats with a deficit of $75,000,000 the following year, the necessity was imposed on the Cleveland administration of finding revenue sufficient to close the gap. The most obvious way was to restore some portion of the sugar duties, which had been repealed in the vain hope of reconciling the country to the McKinley tariff. The House, however, decided that sugar should remain free, and that the bounty should be repealed. We think that this was a mistake, and that the Senate was entirely justified in reclaiming a portion of the revenue from sugar; and although we detest bounties, as containing the germ of all the socialism and Coxeyism now rampant, we should not have grudged some gratuity to the planters of cane and beet for a limited number of years, either by tariff or by bounty. The plain and honest course for the Senate was either to pass the bill as it came from the House, or to impose a revenue duty on raw sugar, which would have protected the planters in an incidental way.

The Senate did the latter, but it did not stop there. It proceeded to construct a monstrous scheme of bounty and protection to the one industry in the United States which stands least in need of government bounty and tariff coddling. It would have been quite as appropriate and edifying, and quite as good policy, to have enacted that the Standard Oil Trust (or Company, if that name is preferred) should receive thirty million dollars out of the public treasury during the next six months as a reward of merit, and one-eighth of a cent per gallon for all the oil they might sell in this country thereafter, as to do what is done for the Sugar Trust (or Company) in the Senate bill. The Sugar people have the same grip on the country that the Standard Oil people have had these many years. They control such a vast quantity of freight that they can dictate their own terms to the railroads. They control such an enormous amount of capital that they can dictate the price of raw sugar to the planters of the West Indies and of the East Indies.

These things we do not complain of, because they are not governmental contrivances. We allude to them only to show that anything like a bounty or protection to this monopoly is not only unnecessary and uncalled for, but reprehensible in the last degree. It is true that the Republicans gave to this monopoly raw sugar free of duty, and a protection of half a cent per pound plus a countervailing duty against the German export bounty. This was an enormous gratuity, but it was in keeping with the Republican idea of protection, which has been gradually enlarging its scope for thirty years. Originally, it meant protection only where it was clearly needed. Now it means protection to anybody who asks for it (except the quinine manufacturers). Formerly it meant protection sufficient to insure fair competition. Now it means prohibition, for no argument is more common, or has greater force, than the statistical tables showing that some small amount of an article (pig iron, for example) is still imported at Galveston, or Seattle, or some other place far distant from our furnaces. In every such case the Home Market Club is ready to burst with indignation if the duty is lowered by the smallest fraction. Its members really think that they have been attacked by highwaymen and robbed of their pocketbooks.

The Democratic party professes to be opposed to this conception of the duties of government. It holds that the function of government is simply to collect and disburse its revenues in an economical and just manner, and especially not to pamper greedy and overgrown monopolies. How have its principles been carried out in the sugar schedule? In a way to disrupt the party inevitably, and perhaps for all time. If the House consents to let the Sugar Trust collect the sugar duties for its own use by importing in anticipation of the tariff during six months or any other period, however small, the party is doomed. The Philadelphia *Ledger's* correspondent tells us that a prominent member of the Senate finance committee says:

> "We shall inform the [conference committee of the two houses] that it is not the bill many of us desire, but that it embraced the most radical reductions which could be obtained in our body with any chance of its passage. We shall give them the option of assisting to secure its enactment into law, or of defeating any measure of tariff reform, because no material modifications of the bill as amended by the Senate can pass that body. The conference committee will be given the alternative of the Senate bill or no bill; of a measure of reasonable reduction or a measure of no reduction; of a partial carrying out of the Democratic platform or a positive refusal to do anything to fulfil the promises of 1892. I have no doubt what the result will be."

Very well! If the Senate's idea of a "reasonable reduction" is a gratuity of this kind to the Sugar Trust, better that the whole bill were killed, and the Democratic party along with it, and that a party of free trade were founded on its ruins. Then the Sugar Trust can bestow its campaign contributions on one party exclusively, instead of alternating between the two. The *Tribune* of Sunday, under the heading "Sugar and the Bill of Sale," calls attention to the fact that Senator Quay voted in the interest of the Sugar Trust when that schedule was before the Senate, and that Senator Aldrich dodged the vote on one of the most important amendments. Probably the *Tribune* knows more than it cares to tell about the bill of sale. It was rumored at the close of the Presidential campaign of 1888 that the sugar people contributed $100,000 to Mr. Quay's committee, and that this contribution was made at the instance of Senator Aldrich. If this were true, it would account satisfactorily for a good many things, including the favorable position which the refining interest received in the McKinley tariff. It may be true, also, that the sugar people, being men of much sagacity and worldly wisdom, came to the conclusion, near the end of the campaign of 1892, that the Democratic party was the winning side that year, and hence pitched their dollars in that direction. Or it is just possible that they contributed to both parties in both campaigns, in order to be on the safe side. The only thing that can be counted on with certainty is, that on whichever side they placed their money, it was a pretty large sum—an amount corresponding in some degree to their tariff bonus, perhaps one or two per cent. of it.

If the sugar people can carry their measures through the House as they have carried them through the Senate, there is no reason why the bill of sale should not be repeated indefinitely. The whole proceeding is an apt illustration of the workings of the protective tariff, and it must not be supposed that the sugar people are the only ones who are "in it." They are in it a little deeper than others because the importations of sugar are so enormous. It is this which makes them more conspicuous than any other tariff beneficiaries. We can recall a time when the copper-producing interest drew all eyes to itself for the same reason, and there was a time as far back as 1857 when speculators in wool caused such a scandal in connection with the tariff that a special investigation of it was ordered by the House. It may be put down as an axiom in political economy that whenever a valuable thing, be it a commodity or a franchise, is exposed to competition, there will be bidders for it, and that it will bring something near its value. If this thing is the right to tax the public under the guise of a duty on sugar, starch, lead, cordage, copper, or what not, it will bring its price in the shape of campaign contributions, if not in more reprehensible disbursements, and the bill of sale is just as plain and business-like in the one case as in the other. It delivers a political party (or so much of it as may be necessary to insure the carrying out of the trade), as goods sold, packed, labelled, and paid for. Delivering the party means delivering the American people as a great goose to be plucked for at least four years. The next bill of sale may be made out by the opposite party, but the effect is the same.

THE CONNECTING LINK.

"PEOPLE should not forget," said Dr. Parkhurst a few days ago, "that the Police Department is only the maw of Tammany—that part of Tammany in

which the whole system of blackmail and corruption is digested." That is the view we have always maintained, but of which it has been difficult to obtain positive proof. Mr. Goff succeeded on Thursday in getting proof in abundance from the mouth of a Tammany witness who was as well qualified as almost any member of the organization, except, perhaps, "Jimmy" Martin or "Paddy" Divver, to tell the whole story. Ex-Senator, now Judge, Roesch has been one of the most favored of Mr. Croker's young "counsellors" for many years. He was the favorite Tammany member of the Assembly for four years, and its favorite member of the Senate for a like period. Since 1891 he has been the Tammany leader of his district, and last November he was elected, as the Tammany candidate, civil justice in the Fourth District.

He confesses on the witness-stand that he has been in the habit of taking retainers from the keepers of disorderly houses to protect them and their inmates against the efforts of the police to enforce the laws; that he has given the keeper of at least one such house a slip of paper with his name written upon it to be used with the police whenever her house was "in trouble"; that though he took a fee of $100 as a retainer from one woman, he never drew a paper for her, or appeared in court for her, or performed a legal act for her. He admits that as the Tammany leader of his district he is president of a Tammany club, of which his brother is treasurer, and among whose members there are many liquor-dealers and at least one keeper of a disorderly house; that he has interfered constantly in the Police Department for the purpose of getting friends either put upon the force or promoted or transferred; that he has known of policemen being employed to go about among liquor-saloons selling tickets at five dollars each for the "chowder parties" of his Tammany club; that he has to distinguish constantly between his services as counsel and his services as Tammany leader, but that he never makes a mistake in confounding the two or in taking a retainer in the latter capacity; that he frequently appears as counsel before the Excise Board to obtain licenses for liquor-saloons, receiving fees as high as $150 for the service, and usually succeeding.

We do not believe there is a particle of doubt in the minds of the committee who heard this extraordinary confession, or in the mind of any reader of it in the newspaper reports, that Roesch has been using his position as a leader of Tammany Hall to levy tribute upon the liquor-saloons and criminal resorts of the district for the benefit of Tammany Hall. Whenever the pressure of the police upon "a madame" has become intolerable, she has retained Roesch as "counsel" to interfere in her behalf, and he has interfered. "Do you mean to tell the committee that you didn't take her [a madame's] money to protect her from the police who were troubling her?" asked Senator O'Connor. "Yes," replied Roesch; "I took a fee to look out for her whenever she or her girls were arrested or annoyed." That is a noble occupation for a counsellor, soon to be a civil justice, to be engaged in, yet it seems to have been a regular business with Roesch. Equally regular appear to have been his services to liquor-dealers, to men who wished to get upon the police force, or who desired favors of any kind. The flow of money into the Tammany treasury from all these and kindred sources seems to have been steady and large. There is no evidence to show that the system does not continue undiminished since Roesch became a civil justice; on the contrary, there is no reason to doubt that this addition to his functions of leader and counsellor has greatly increased his capacity as a Tammany collector for the district.

In speaking of the civil justices, in one of his special messages of 1888, Mayor Hewitt said: "The civil justices, with some honorable exceptions, seem to have regarded it their duty to protect the citizen against the complaints of the police." Roesch was engaged in this business before he went upon the bench, and it is reasonable to suppose that he has not discontinued the practice since. He is a fair sample of the Tammany members of the district-court bench, which has been used by Tammany in the same way the police-justice bench has been used, as a refuge and stronghold for the most disreputable of its district leaders. "Pete" Mitchell was for years a civil justice, and many a great Tammany rascal has, during some portion of his career, held a seat upon it. The evil of such possession is too obvious to be dwelt upon. Like the Tammany possession of the police-court bench, it poisons justice at the fountain-head, and makes the machinery of justice among the most helpless of the population a protection for crime and a source of revenue from crime.

It should be remembered of Roesch that, as chairman of the judiciary committee of the Senate, he sat in judgment upon the finding of the Bar Association against Judge Maynard, examined the eminent lawyers who framed that finding, and vindicated Maynard from their accusations. At the very time he was performing this service for Tammany and Hill, he seems to have been collecting revenue from disorderly houses as their "counsel" against the police. Here is a picture of the moral quality of the average Tammany statesman which we commend to the thoughtful consideration of all people who are afraid lest the condemnation of Tammany be too "sweeping and indiscriminate." What other Tammany magnate, from Croker down to "Mike" Daly, would fare any better were he to be put on the stand and his every-day proceedings brought to the light?

THE POOLING QUESTION.

THE Chamber of Commerce, in advocating the passage of a law permitting competing railways to divide their tonnage or earnings among themselves in some agreed proportion, is in line with public opinion at the East. The argument for pooling is quite simple. Fierce rivalry has reduced the rates actually charged to shippers to such low figures that, in connection with other causes, one-quarter of our railway mileage is now in the hands of receivers, and a large proportion of the remainder see insolvency staring them in the face. Not only is the capital invested in railways entitled to a return as a matter of economic right, but as a matter of economic law it must receive such profit if we are to have further industrial progress. The grave consequences to the United States which would ensue upon a universal failure of our transportation companies are clearly apparent to thinking men. The charges of our railways are on the average much lower than those of Europe, and cannot be raised extortionately even if the companies combined for that purpose, because our lake, river, and canal systems forbid it. Moreover, commercial conditions throughout the country are set to low freight rates, so that the carriers would lose their traffic if tariffs were much advanced. Fairness to the railways and prosperity to our industries demand that at least the carriers be allowed to collect their earnings according to their present published schedules without further secret reductions.

This, in brief, is the argument in favor of some form of railway pooling, and to those familiar with the business situation it appeals with great force. The Interstate Commission concedes the point, while Mr. Patterson of the House committee, in presenting its pooling bill, made an extended report which certainly put the necessity for some such measure in a strong light. Perhaps the most encouraging sign of all was the passage of a resolution, favoring railway pooling under safeguards, at the convention of State railroad commissioners held in Washington last month. This resolution was adopted by a vote of 15 to 8 after a strong paper by State Commissioner Dey of Iowa and a thoughtful address by Interstate-Commissioner Knapp, both in favor of the proposition.

Clearly enough, the claims of the railways to reasonable rates from their standpoint (the claims of the public to like reasonable tariffs being long ago admitted) are making headway throughout the Union. Yet, in spite of this growing feeling in favor of a repeal of the section

of the act to regulate commerce which forbids pooling, there is some doubt whether Congress will soon enact such a law. Some of our States are not influenced by economic arguments. For years they have reasoned that the railways which carried the produce of their citizens were owned in the East or in Europe, and hence any falling off in profits did not concern them. Their object was attained if farmers and traders could get transportation still cheaper either by legislative compulsion or through rate-cutting. If the carrying company was forced into bankruptcy, it was no concern of the Granger commonwealth. The prevalence of this reasoning is shown even now by the vote in the convention just spoken of, where the commissioners from Georgia, Mississippi, Virginia, Illinois, Minnesota, and Montana voted against pooling in any form.

It is questionable whether Congressmen from these and similar States will be willing to grant pooling just yet. The secretary of transportation for Nebraska, in the last *Independent*, admits the feeling of hostility to railroads in his State, though he explains its origin and hopes for its modification. Until the people of these States are led to change their opinions, partly through argument, but largely through the lessons of experience, it would not be wise to count upon the easy enactment of a pooling law. When the service is reduced in those States by the efforts of the carrying companies to save expenses; when the farmer's son is discharged by the railway; when the reduction in the amount of money paid out monthly in wages is such as to cripple the sales and the income of the grocer; then, after the first outburst of indignation, we may look for a revival of the maxim that the community cannot be permanently prosperous if the railway is not. But it is doubtful whether we may expect such a revulsion in Granger and Southern opinion until the object-lesson has been thoroughly put before them and its meaning thoroughly learned. The Rock Island Railway, in its reports, prints a statement of the exact sums paid yearly in salaries and wages. From this table it may be seen that payments to employees form 55 per cent. of all that company's expenditures of every description. If we deduct items of expenses for cost of coal, taxes, car mileage, injuries to persons, and losses to property, and the like which involve no wage payments directly, the pay-rolls comprise 75 per cent. of the road's working cost. The real proportion of labor is greater, as in locomotive fuel for example, where the miner's wages constitute much the larger part of the cost; so with rails, ties, and all supplies used by the company—payments to labor are the principal items of the cost.

The large sum paid directly as wages, amounting to over $8,000,000 on the Rock Island, is spent by the employees in the territory through which the road runs. How much the community is dependent upon these pay-rolls for trade support will not be realized until the flow of money is of necessity checked or stopped. When this argument to the pocket-book is considered at the West and South sufficiently to allow of a change in public sentiment, we may expect that Congress will pass some sort of pooling bill. But whether this public opinion is now developed enough to approve of such an act, is an open question. In time something of the kind will get upon our statute books, as in Europe, where pooling is not forbidden, for it is right as a matter of equity and as a matter of prosperity also to all concerned in our great industry, railway transportation.

PRESIDENT ELIOT.

PRESIDENT ELIOT of Harvard completed a few days ago the twenty-fifth year of his administration of the college. The entire faculty united, on the anniversary, in a memorandum setting forth their keen appreciation of all that he had done and all that he had been, to the great institution on whose history he has made such an important impression. It is difficult for those who know Harvard only in its present condition to estimate the work he has done for it. One has to go back to 1869, when the college was looking about for a candidate to fill the vacancy left by President Hill's resignation, to get the full measure of his services. There were two traditions about the presidency which were still strong in Cambridge at that period: one was that the president of Harvard College should be either a clergyman or a man of a clerical turn of mind. The other was that he should be an elderly person. It was not without difficulty, and much searching of the heart, that these were both set aside in President Eliot's favor. Not only was he not a clergyman, but he was a man of the modern scientific school, and he was not yet forty years old.

He took his place, too, when the old régime in American colleges had clearly reached its last limits. The war was over, the wealth and the scientific and literary curiosity of the country, and especially of the youth of the country, had increased by leaps and bounds. It was becoming quite clear that a curriculum and methods of instruction designed in the seventeenth and eighteenth centuries, not only "to advance learning," but to guard the churches from an "illiterate ministry," was unfit for the latter half of the nineteenth; but who was to make the change? Who was to modernize and secularize the college—to convert it, in short, into a university? The instructors of established reputation were unequal to any such work. Was it possible to get it intrusted to a young and comparatively unknown man?

When Mr. Eliot took hold of it, he had nearly everything to change—the modes of instruction, the kind of instructors, the nature of the curriculum, besides greatly increasing the ground covered by his faculty; and to do all this he had to raise immense sums of money. He had to encounter, too, the bitter prejudices of a very conservative community, to whom the ancient ways were a sacred inheritance, and especially the prejudices of fathers who could not see that what was good enough for them was not good enough for their sons. And he was not a man of winning ways; he did not find it easy to put attractive drapery around his plans. In an unusual degree "his armor was his honest thought." Everything he conceived or proposed had to win on its merits, and to win under criticism of varying kinds and from different quarters, but win it did. In recalling the trials, struggles, and experiments of those early years, it is but just to a memory dear to Harvard, to say that he had in the late E. W. Gurney a much-trusted and most valuable counsellor, who might himself have done Mr. Eliot's work, had he been called to his place and had he possessed the splendid courage which has always been one of the president's most marked traits.

At all events, the work has been done. Harvard has been converted from a sort of high school devoted largely to preparing men for the ministry into a modern university in which almost everything teachable is taught, and in which the real student is allowed to pick and choose among the now so numerous sources of human knowledge. The proof of President Eliot's success is to be found in the fact that his example has been followed in other colleges—in some closely, in others at a greater distance. Yale, Columbia, and Princeton have all been reorganized in a greater or less degree on the lines he laid down at Harvard. The suggestion of the Johns Hopkins régime undoubtedly came, in part at least, from Harvard, and the great institution which is springing up in Chicago will owe its character and aims not a little to the success of the Cambridge experiment. In fact, no history of American university education will ever be written in which Mr. Eliot will not figure as its real founder, as the man to whom it owed its renaissance after two centuries of mediæval bondage.

That there have been faults and mistakes in this process, probably President Eliot himself would be the last to deny. In the work of university reform, as in other things, men must

have the defects of their qualities. A man who more distinctly represented scholarship or thought than President Eliot, could never have thrown open the doors of the college both to scholarship and to thought so widely as he. The value of his work to both one and the other will probably be better known when he is gone than now. For nothing is more certain than that the man who was to convert American colleges into great seats of learning in the higher sense of the term, would have to be a man of action rather than of thought, to shine as an administrator more than as a scholar. We venture to predict that the day is not far distant when these great establishments will have two heads instead of one; when the man who manages its business and watches over its discipline will not have to represent to the world its tastes, its faculties, or its ideas, and the one who stands for its intellectual range and characteristics, will not have to think of its ways and means. This division of labor will undoubtedly be the next great collegiate change. As yet the president has to occupy himself only too much with the adjustment of the machinery to the altered conditions of American life, and with the management of the great wealth which American liberality is pouring into his lap.

WILLIAM DWIGHT WHITNEY.

THE last half-century has witnessed thoroughgoing revolutions in politics, in religion, and in science; and in no department of science is the revolution more thorough than in philology. First among the names of Americans who have helped to bring about this result is William Dwight Whitney. He is fallen on sleep. How has he served his generation?

His marvellous scientific productivity extended over a period of forty-five years; it began with an essay 'On the grammatical structure of the Sanskrit,' translated and abridged from Von Bohlen, and published in the *Bibliotheca Sacra* for 1849. He was then but a little over twenty-two years old. Long and rich in achievement as this period is, his death is nevertheless untimely and premature, for his splendid intellect was still unimpaired by age. He was born in a place that has produced a remarkable number of distinguished men, in Northampton, Mass., on the 9th of February, 1827, the son of Josiah Dwight and Sarah (Williston) Whitney. In 1842 he entered the sophomore class of Williams College, and was graduated there in 1845. Doubtless the woods and hills of that picturesque region gave an additional charm to the practical studies in natural history—especially ornithology—to which he devoted much of his time while in college, and which were a valuable resource and delight to him for many years afterward. Of the four years succeeding his graduation, more than three were spent in the Northampton Bank; and in the summer of 1849, he went to Lake Superior as an assistant in the United States Geological Survey, the botany and ornithology and the keeping of the accounts being intrusted to him. On his return in the autumn, he went to Yale College for a year, to continue under Prof. Salisbury the study of Sanskrit which he had begun the year before.

In the autumn of 1850 he sailed for Germany, where he studied chiefly under Prof. Weber of Berlin and Prof. Roth of Tübingen. And now without delay he made the real beginning of a brilliant scientific career by copying and collating the European manuscripts of the 'Atharva-Veda,' one of the most important and ancient of the sacred books of India, and of which he and Prof. Roth were to be joint editors. In the summer of 1853 he returned home, having already, while still in Germany, accepted a call to the chair of Sanskrit at Yale. Its duties he did not assume until 1854; but within little more than two years his name and reputation as a scholar were established by the issue of the *editio princeps* of the 'Atharva-Veda.' And he still lacked some months of thirty!

Meantime, however, it became necessary for him to eke out the wholly inadequate salary of his professorship by giving instruction in modern languages. This necessity, much as it may be regretted by the friends of his chosen science, was not without resultant public benefit in that it was the occasion of his preparing a series of text-books, especially for the study of German, on a plan which renders them preëminently well suited for maturer minds. Such time-consuming labor might well have proved an all too serious handicap for smaller men, but not so for Whitney. In quick succession came now some of his most important works. His annotated translation of the 'Sūrya-siddhānta' appeared in 1860; and this, with his other astronomical papers, forms the most notable contribution of the century to Occidental knowledge of Hindu astronomy. The Prātiçākhya of the 'Atharva-Veda,' which he edited, with translation and elaborate notes, in 1862, is a phonetico-grammatical treatise upon the text of that Veda, and is of fundamental significance for the establishment of that text. The like is true of the Täittirīya-Prātiçākhya, which he issued in a similar manner in 1871. We know not which to wonder at the more—whether at the marvellous knowledge of details of these learned and labored Hindus, or at the masterly way in which their Occidental expositor has grasped what they knew and has recast and presented it in a form most lucid and facile. In 1881 a complete Index Verborum to the 'Atharva-Veda' was issued, and an annotated translation of this Veda is now in manuscript, nearly ready for the press.

In 1879 came his 'Sanskrit grammar,' published in English and in German at Leipzig, to which, in 1885, was added a voluminous supplement entitled 'Roots, verb-forms, and primary derivatives of the Sanskrit language.' Of his strictly technical works, these are the crowning achievements; and for them—considering, or even not considering, the status of Sanskrit philology—it would be extremely hard to find a parallel. They are based not on the dicta of predecessors, but upon actual observation of the facts of the language, which then are subjected to masterly classification and rigorously scientific induction. The author was one of the strict Indianists rather than one of the professed comparative grammarians; but these two works have the merit of often setting the problems for the comparative grammarians and of putting into their hands a good part of the materials for solution.

While steadily carrying on the extensive technical investigations just noticed, Whitney found time to write frequent and valuable minor essays. These treat of Hindu astronomy, of phonetics, of comparative grammar and mythology, of Oriental religions and literatures, and of the origin and nature of language. His Smithsonian and Lowell lectures, rewritten and expanded, were published in 1867 under the title 'Language and the study of language.' This volume covers the ground of general linguistic science, and also treats the most difficult questions of linguistic speculation. Taking it by and large, it is still the best general work of its kind. Similar topics, but in more compendious form, are treated in his 'Life and growth of language,' which appeared in 1875 and was soon translated into German, French, Italian, Netherlandish, and Swedish. Of the miscellaneous papers scattered through the *North American Review*, the *Nation*, and elsewhere, a dozen or more were put forth in 1873 as 'Oriental and linguistic studies,' and a second series of them in the year following. Some of them are of permanent interest and value; and one of them, on 'The Vedic doctrine of a future life,' deserves to be ranked as a veritable classic.

But this was not all. In 1842 the American Oriental Society had been founded in Boston by John Pickering. On the death of its eminent founder its centre of gravity naturally shifted to the home of Salisbury, of Woolsey, and of Hadley at New Haven. Whitney was elected a member in May, 1850, less than eight years after the first meeting, and his name occurs in the Society's Journal for the first time in the roll of members at the end of the second volume. For eighteen years (1855–'73) he took the care of its library, and for twenty-seven years he served as its corresponding secretary—namely, from 1857 to 1884, when he was chosen its president—so that his record shows an aggregate of fifty-one years of official service. His first contribution is a Vedic article in the third volume. Of the ten volumes, iii.–xii., of its Journal proper, much more than one-third of the contents is from his hand; or, if we count only the seven volumes, vi.–xii., more than one-half; all this apart from his multifarious papers in its Proceedings. One of his Harvard friends once said: "It always seemed to me pathetic and [for us] discreditable, when Prof. Whitney came to Boston year after year, like a judge, to 'hold' the Oriental Society, and went home again after he had read what he brought in his own pocket, . . . [and had] said about everything that was worth saying." He lived to see all that changed, and to hear an account of the Society's recent New York meeting, at which sixty-five members were present and forty-odd papers were offered. He was the first president of the American Philological Association, formed in 1869, and one of the most frequent contributors to its Transactions and Proceedings.

To him, too, belongs the distinguished honor of being one of the four "faithful collaborators" who—next to the authors, Böhtlingk and Roth—contributed most to the great seven-volumed Sanskrit-German lexicon published (1852–'75) by the Imperial Academy of Russia. In view of the power thus fully proved and of the distinction thus fairly won, it was inevitable that he should be sought as editor-in-chief for what is—barring Murray's, whose purpose and plan are wholly different—the greatest lexicographical undertaking ever adventured by men of English speech, 'The Century Dictionary.' To settle the principles by which the staff of editorial assistants and contributors was to be guided was a work demanding great breadth of learning and largeness of view—as may indeed be inferred from the preface. And under his superintendence, accordingly, was

executed the work, destined, no doubt, to become a potent factor in popular enlightenment.

Such achievements, of course, secured the applause of the judicious. Not to mention honorary degrees, the Asiatic Society of Bengal, the Royal Asiatic of Great Britain and Ireland, the German Oriental, the Philological of London, and other societies made Whitney an honorary member; and, still among others, the Academy of Berlin, of St. Petersburg, and of Rome (the Lincei), and the Institute of France, their member or correspondent. His most conspicuous honor of this kind was his election as Foreign Knight of the Prussian Order "pour le mérite" for Science and Arts, to fill the vacancy caused by the death of Thomas Carlyle.

He was a living example of what genuine scholarship is. He had some of the most distinctive traits of the best German scholars—extreme thoroughness, minute accuracy, mastery of his material; but the trees never hindered him from seeing the wood, and for him the broader aspects of a question were never obscured by the details. Trained in the best schools of his day, he was no slavish imitator of any model, however good. And his originality showed itself not only in the plan and execution of his own works, but also in his pointing out to others—in Baconian fashion—the methods most likely to be fruitful of definitive results. The admirable qualities of his mind are seen perhaps nowhere to better advantage than in his 'Language and the study of language.' To repeat the fitting words of Georg Curtius, "this work is distinguished for its sobriety and rigorousness (*nüchterne Strenge*)." In striking contrast with the speculations of writers whose toes rarely seem to touch the ground of every-day fact and experience, Mr. Whitney's argumentations show the influence of an all-pervading common sense. And to this are added simplicity and directness, with strictness of logic and clearness of thought; sometimes also, perhaps, too great concision—but one must indeed think, to read him. Said a highly esteemed scholar recently: "I never saw him but once or twice, but I feel that he has been one of my best and greatest teachers." And what shall be said by those who came directly within his personal influence? They can tell of his encouragement of the young, his kindly helpfulness to the inexperienced, his patience with the slow, and of his endless painstaking with papers, perhaps crude and bristling with Teutonisms, of some raw or bumptious débutant just home from his triennium in Germany. And they can bear witness to his calm dignity as presiding officer, to his freedom from all self-seeking in his relations with his fellow-scholars, and to his genuine modesty of bearing, of speech, and of soul.

We have thus seen Prof. Whitney actively engaged in the three ways mentioned in these columns by the necrologist of Asa Gray, namely, in the elaboration of strictly technical works, in the preparation of educational treatises, and in the popular exposition of scientific questions. The last two methods of public service are direct and immediate, and to be gainsaid of none; yet even here the less immediate results are doubtless the ones by which he would have set most store. As for the first, some may incline to think the value of an edition of the Vedas or of a Sanskrit grammar—to say nothing of a Prātiçākhya—extremely remote; they certainly won for him neither money nor popular applause; and yet, again, such are the very works in which we cannot doubt he took the deepest satisfaction. He realized their fundamental character, knew that they were to play their part in unlocking the treasures of Indian antiquity, and knew that that antiquity has its great lessons for us moderns; further, that the history of the languages of India, as it has indeed already modified, is also yet to modify, and that profoundly, the whole teaching of classical and Germanic philology, both in method and in content, and that the history of the evolution of religions in India is destined to exert a powerful influence for good upon the development of religious thought and life among us and our children. He labored, and other men shall enter into his labors. But it is this "faith, the assurance of things hoped for," which is one of the most vital attributes of the true scholar.

Some eight or nine years ago, a most serious and alarming disorder of the heart manifested itself in Prof. Whitney. His undaunted courage in the face of death's grim messenger was fairly heroic—a fit pendant to the fearlessness of his always inexorable warfare against sham and pretence. Adhering strictly to the regimen prescribed by his medical advisers, he continued to labor on, heaping, as it were, the already brimming measure of his life-work. The end came on June 7 at New Haven. His life is a noble inspiration to his fellow-students, and the example that he set will not be forgotten as long as true scholarship exists in America. But his bereaved colleagues will say, as did he upon the death of James Hadley, "My master, my master, the chariot of Israel, and the horsemen thereof!"

THE PARIS SALONS.

PARIS, May 22, 1894.

IT is unfortunate, but inevitable, that in large exhibitions only work conspicuous for rare merit, or eccentricity, or pretension has a chance to be seen and studied. Each year this fact is more strongly emphasized by the visit to the Paris Salons. No doubt in each there are canvases likely to prove delightful in a smaller collection or hanging on one's own walls, which, in so motley a gathering, are completely overshadowed. It is usually the huge machine, painted down to the standard of juries and the gaping crowd, that carries the day; or else, the lurid tragedy and strident anecdote; or, it may be, the delirious striving after individuality of technique or novelty of sensation.

The evil is more apparent at the Champs-Élysées, where the big picture prevails. This spring, its manufacturers seem to have fallen lower than ever into the abyss of puerile or outrageous commonplace. Sentiment has betrayed M. Detaille into reporting in paint a Paris fire in order that he may, not suggest a dramatic harmony in the play of flames and light, but show a row of frock-coated gentlemen taking off their top hats to the "Victims of Duty"; mysticism has misled M. Rochegrosse into a *plein-air* problem, in which the meaning of his "Chevalier aux Fleurs" is less puzzling than his ignoring of all values. Lamartine sails comfortably heavenward on the substantial wings of a Muse of M. Édouard's devising; brutal sensuality claims for its own the overblown women and drunken rakes of M. Roybet's naturalistic fancy; while the whole Salon seems typified in M. Bonnat's ingenuous conception of "The Triumph of Art," trampling, as if on the field of battle, over the prostrate foe, and riding aloft upon its Pegasus into an expanse of indigo which the advertisements of Reckitt's blue would find it hard to excel in crudeness.

It is of pictures such as these, clamoring—and not in vain—for notoriety, that necessarily one carries away the strongest impressions. And yet, even on walls so disfigured, space has been found for good work, though in no great excess. Once more M. Pointelin, in his fine poetic landscapes, delights; once more M. Français and M. Harpignies, in their conventional composition and restraint, are not without charm; once more, M. Nozal, M. Clary, and M. Gosselin show themselves sincere students of nature, observant and careful. But again this year, as last, it is to the foreigner that the Champs-Élysées owes chief distinction. Not a portrait can compare, in elegance and individuality, with Mr. Orchardson's of Sir Walter Gilbey, already seen in London; not one of the colossal designs reveals in the painter so just a sense of decorative requirements as Mr. Frank Brangwyn's "Gold, Frankincense, and Myrrh"; not one of the many followers of Bastien has borrowed from him with so much intelligence as Mr. Clausen. It is Mr. Walter MacEwen, however, who has achieved the most notable success with his picture of "Une Madeleine": in the figure of the woman kneeling at evening in a dimly lighted church, there is the scholarly drawing to which he has accustomed us in his work; but in the rich harmony made of the trailing white draperies, the deep mysterious shadows, and the soft glare of lights before a distant altar, there is the true painter's poetry and a feeling for decoration, which hitherto have not been characteristic of his canvases. He has never done anything better. Among the other American exhibitors are Mr. Bisbing, his studies of cattle in the open air refined and well-observed; Mr. Walter Gay, cigarette-makers at work, this time giving him the motive for one of his quiet, low-toned interiors; Mr. Bridgman, whose large decorative arrangement does not tell in its present surroundings; Mr. Boggs; and Mr. Mosler and Mr. Ridgway Knight, who are tending unduly toward the commonplace in sentiment. Of the men considered leaders in the old Salons, of Bouguereau and Henner, Benjamin Constant and Lefevre, perhaps the less said the better. Of late years little has been expected of them, nor have they disappointed expectations.

At the Champ-de-Mars, of course, matters are mended, but not so much as might be hoped. Here it is disappointing to find a gradual falling away from the high standard which the new Society, in its secession, at first established. With M. Carolus-Duran, who seems to be growing indifferent with time, M. Frappa, who turns out the French equivalent to the English Christmas chromo, and M. Friant, well to the fore in the society itself, it is not surprising that by degrees contributions of no importance are accepted in greater numbers. This spring, bad or indifferent canvases are in a large majority. Besides, two or three of the masters for whom one looks with special interest, are now absent. M. Carrière and M. Raffaëlli send nothing but a few lithographs and etchings which were shown some months ago in one of the Grafton Gallery's exhibitions. M. Boldini sends even less, for he is entirely unrepresented. On the other hand, one can but wish that M. Besnard had exercised a like restraint, for, in a brilliant crimson horse and an equally impossible orange lady, he has overstepped the limits of artistic reticence and dignity. Nor is M. Puvis de Chavannes much more satisfactory, though he may offend less aggressively. His decorations for the great stairway at the Hôtel de Ville please no more now that they are carried out in color than they did in the cartoon exhibited last spring.

The blues and mauves of the scheme he has adopted are cold and unpleasant, ill calculated to redeem the commonplaceness of the composition, which I noted a twelvemonth since. It is doubly to be regretted that M. de Chavannes has failed where so often, hitherto, he has succeeded, for the Hôtel de Ville has need of many fine designs upon its walls to compensate for the one ceiling which is to be covered by M. Bonnat's "Triumph of Art." But, at least, M. de Chavannes fails from over-refinement, not from vulgar boisterousness.

I have pointed out the most prominent defects of the exhibition. Fortunately, it has many and delightful merits, as well. It has, to begin with, the portraits and marines of Mr. Whistler. Of the latter I wrote when, in the winter, they were hung at the Grafton Gallery in London. Seen a second time, they continue to impress by the knowledge they reveal, by their simplicity of rendering, by their mastery of the secret of fine color. But even more impressive is the portrait of "Comte Robert de Montesquiou-Fézensac," designed somewhat after the manner of the Sarasate, but far stronger in the expression of character, more lovely in the harmony of "Black and Silver." It is simplicity itself: the tall, slight figure stands facing you, one gloved hand resting on a cane, the opposite arm holding a gray-lined coat; but Mr. Whistler shows, as he has shown before in his Carlyle, that, for the artist, subject is nothing, treatment everything—the much-despised modern coat and trousers answering his purpose as excellently as all the treasures of Wardour Street. Mr. Alfred Stevens is another painter whose canvases are always distinguished. He also understands the folly of overloading his impressions of the sea with useless detail, and, therefore, his marines also charm by their breadth of handling and subtlety of color, while perhaps there is no modern who is so legitimately heir to the traditions of Terburg, as is proved beyond a doubt by a wonderful little interior serving as background to a lady in no less wonderful yellow satin gown falling in the rich folds Terburg loved. M. Aman-Jean is still another exhibitor who has not condescended to disappoint by undue eccentricity or desire to cater to a passing fad. His phase of Rosicrucianism, which first made him known, has not undermined his artistic sense, to which, and not to occult sympathies and influences, he owes his love of fine, stirring harmonies of color and stately decorative themes. It is in his portraits he now excels, and, of the five hung, there is not one that does not explain his desire to give not a mere painted photograph of his sitter, but a graceful and harmonious decoration. He may have a bias towards sentiment, as his rendering of M. Dampt, the sculptor, would suggest, but to it he never yet has sacrificed the more artistic qualities.

It is not only in the case of M. Aman-Jean that the decline of modern mysticism begins to be apparent. Rosicrucianism, as a fashion, has been exhausted, and its old supporters either, with him, have given it up altogether, or else have come to the end of their resources with M. Carlos Schwabe, who has rung the changes on the old passion flower and peacock feather, and resurrected Angélique and Félicien of the "Rêve" until they threaten to grow monotonous. Primitiveness, too, seems a game played out, though M. Point masquerades as Botticelli with results decidedly amusing. And the Scriptures have quite lost their fascination, though M. Béraud cannot refrain from adding a melodramatic Way of the Cross to his melodramatic Crucifixion, though M. Carolus-Duran is seeking on Calvary the sensation his portraits have long ceased to yield. Mysticism and its kindred fads may have marked the reaction from the naturalism of Bastien-Lepage and his school. But in their turn mystical excesses, apparently, are leading artists back to true sobriety of aims and simplicity of means. It is for this reason, probably, that the year's best work is found among the portraits. Mr. J. W. Alexander again scores a decided triumph in the several he contributes, even if one cannot help wishing that either he would not use such very coarse-grained canvas, or else that he would master its difficulties a little better; as it is, the paint sinks in fast and leaves too often a messed-up-looking surface, thin and dry in quality. However, while he is as graceful and elegant as ever in his portraits of women, he now shows in his M. Thaulow and M. Pranishnikoff that he can paint men of no great charm of personality every whit as successfully. If he will but see to his canvas, his future triumph will be still more complete. M. Gandara, exhibiting but one portrait, of a tall woman in white satin Empire gown, paints with too much character and grace to be overlooked. Mr. Sargent's daring, clever "Mrs. Hammersly" is here. Mr. Guthrie and Mr. Lavery make good the Glasgow School's artistic claims. And Mr. Rolshoven has taken no small step in advance in his three portraits of women, which may be lacking in refinement, perhaps, but have the strength of straightforwardness and sincerity.

For the rest, I should note the marines of Mr. Alexander Harrison and M. Lepère, the landscapes of M. Cazin (who, however, is not at his very best), M. Thaulow, and Mr. Conder, which are a pleasant relief after the dazzling emptiness of M. Montenard's canvases, the glare of M. Dauphin's, and the purple dot of M. Eliot's exaggerations. Mr. Melchers remains faithful to his old subjects, but paints them with more subtle observation and less obviousness, his figures having lost their stiffness, his color having gained in quality. I wish the same could be said of Mr. Dannat's studies of Spanish women, which, now they can no longer astonish by their eccentricity, irritate by their perverse perseverance in a foolish mannerism.

Of the sculpture in both Salons there is really little to say. The average maintained is fairly creditable, but there are few, if any, notable exceptions. The prints might with advantage be written of at greater length than my present space allows. Mr. Whistler, M. Carrière, M. Fantin-Latour, M. Dillon, and others too numerous to mention, are among the lithographers who exhibit; M. Helleu, M. Raffaëlli, and M. Lepère among the etchers; while M. Florian, Mr. Cole, and Mr. Wolf well represent the wood-engravers. For one reason or another, few illustrators contribute, and of these few the most noteworthy, M. Vierge, M. Guillaume, and Mr. Gibson, send to the Champ-de-Mars. Vigorous original drawings, however, not made for illustration, come from M. Gandara, M. Desboutins, and M. Valadon, from Mr. Studd and Mr. Cushing. N. N.

THE COUNT DE SÉGUR'S NAPOLEONIC MEMOIRS.

PARIS, May 23, 1894.

THE name of Ségur is not unknown to Americans who have studied in detail the history of the United States war of independence. Count de Ségur had a very eventful life; he was French Ambassador at the court of the great Catherine and became one of her favorites. There are many interesting details about his embassy in the second volume of Waliszewski's 'Autour d'un Trône: Catherine II. de Russie,' which has just appeared with the sub-title, "Ses collaborateurs, ses amis, ses favoris." Ségur's despatches about Catherine and her court are among the most interesting documents which relate to the history of Russia. He made the first treaty concluded between France and the great Oriental empire; he became afterwards one of the French combatants in the war of independence. At the beginning of the Revolution we find him among the confidential friends of Marie Antoinette, trying to reconcile the cause of the monarchy with the new ideas. After the catastrophe of the 10th of August and the massacres of September, he retired to the house of his brother-in-law, M. d'Aguesseau, at Fresnes, near Paris. We read in the Memoirs of his son, Gen. Count de Ségur, that a few weeks after this horrible massacre of priests, women, and inoffensive old men, he met Danton in the streets of Paris. "Danton stopped him and began to converse, when my father, speaking of the horrors of those two days, told him that he did not understand their motive, their object, or how he, Danton, minister of justice, could not prevent them or at least put a stop to them. They were walking side by side; Danton stopped, looked my father in the face, and, with his well-known cynicism, said to him: 'Sir, you forget whom you are talking to; you forget that we are *de la canaille*, that we came out of the gutter, that with your principles we should soon be in it again, and we can govern only by inspiring terror.'"

These memoirs of Gen. Count de Ségur, of which I have just spoken, appeared in eight volumes in 1873, and, strangely enough, they did not attract much attention at the time. Gen. de Ségur had been aide-de-camp to the great Napoleon, and had shared in all the campaigns of the First Empire; in 1873, just after Sedan, the fall of the Second Empire and the invasion of France, the name of Napoleon had lost its prestige. Now, by a strange phenomenon which it would take some time to analyze, there is a reaction and a Napoleonic revival. Nations as well as individuals live much in the imagination; Napoleonism is a thing of the past, it fills the popular mind with extraordinary visions of glory. Besides, we are tired of mediocrities, and, whatever may be said of Napoleon I., he cannot be called mediocre or commonplace. The publisher of the memoirs of Gen. de Ségur has seized his opportunity; only, as the present reading public does not easily absorb eight volumes at a time, he has issued a single volume of extracts from these memoirs, with this title, 'Un Aide-de-camp de Napoléon'—which, you will see, is sufficiently characteristic.

It was not necessary to give a subordinate place on the title-page to the name of Ségur; his memoirs speak sufficiently for themselves. The extracts have been well chosen. We find in them at first some pages on the Count de Ségur, the father of the General. After the Revolution, he became a councillor of state, grand master of ceremonies to Napoleon, a member of the Academy, and a peer of France. Philippe de Ségur was born in 1780; he was only thirteen years old during the dark days of the Terror. He received but an imperfect education; at the age of nineteen he enlisted in the army as simple hussar among the volunteers who bore the name of "Volunteers of Bonaparte." He was appointed sub-lieutenant

by Bonaparte on the 9th Florêal, an VIII. He had enlisted in the republican army without taking his family's advice; when he announced his resolution to his grandfather, Marshal de Ségur, the hero of Laufeld and of Clostercamp, who had been minister of war under Louis XVI. during the American war, the old Marshal said to him: "You have renounced all the traditions of your family; but, since it is done, since you have voluntarily enlisted in the republican army, you must serve with loyalty and courage."

The Volunteers of Bonaparte were a new formation, which was placed under the orders of Gen. Dumas, an officer of the time of Louis XVI. Ségur was first sent to Switzerland, where he stayed some time, and afterwards joined the army of the Rhine, under Moreau. He gives a good description of this army, which was still imbued with the pure republican spirit:

"There were still in it some *Spartans of the Rhine*, as they were called—volunteers of the first years of the Republic, martyrs of liberty and national independence, for which they had sacrificed themselves with a devotion free from any personal ambition, even from any ambition for glory. They had a hundred times refused all advancement, and, proud of their republican rigidity, they had been seen marching half-naked, hungry, suffering the most cruel privation, and, after their victories, remaining poor among all the goods which victory bestows. War for them was not a business: soldiers, officers, generals, warriors from patriotism, they thought, after having secured the salvation of their country, only of returning to their villages as private citizens."

There were few left already of these "Spartiates" when young Ségur joined the army of the Rhine. After Hohenlinden, he rejoined Macdonald in the Valtellina as his aide-de-camp, and took part in the campaign of the Grisons. He readily espoused among his new friends the principles and ideas of the Revolution. "In the midst of this plebeian army I appreciated the double folly of a royalist, and especially of an aristocratic, obstinacy." From this moment he always tried to reconcile old and modern France, and by this fusion to hinder a return to the policy of the Convention and the Directory. He found in the new army many men who belonged to the old nobility—Caulaincourt, D'Hautpoul, Grouchy, Rochambeau, Macdonald, etc. He lived for some time in Trent with Macdonald, and then accompanied him in his embassy to Denmark. On his return he was presented to the First Consul by Macdonald, and, though he much preferred military life to diplomacy, he was intrusted with a mission to the King of Spain. He had a letter, a mysterious letter, from Napoleon to give to Godoy, the Prince of Peace, but had some difficulty in delivering it, as General Gouvion Saint-Cyr, who was then French Ambassador at Madrid, was at drawn daggers with the favorite. On his return he was appointed *officier d'ordonnance* to Napoleon and charged with the command of the detachment of the Guard which was at the Tuileries. This post brought him into personal contact with the First Consul, with his family, and with the Beauharnais; he had a part to take in the amusements, the balls, the private theatricals of the Tuileries and Malmaison.

The execution of the Duc d'Enghien was a severe shock to Ségur; he enters into many details on the subject of the attempts made against the life of Napoleon, of the conspiracies of Georges Cadoudal, of Pichegru, and others; he renders full justice to the courage of the young prince. He heard at the same moment the news of the arrival of the Duc d'Enghien at Vincennes and of his execution, from the mouth of Col. Hulin. He announced this terrible news to his father, who was then a member of the newly established Council of State. They both, after several days of great agitation, tried to prove to themselves that Napoleon had felt remorse; that he had given orders which were not properly executed, or not in time, and that the execution was the result of a misunderstanding. But Napoleon never expressed any regret for his action, even at Saint Helena. On the Sunday which followed the execution at the Tuileries—

"Bonaparte passed through the silent crowd to go to the chapel. His countenance was unchanged. During the sacrament, while the prayer was going up to Heaven, I examined him with redoubled attention. There, before God, in presence of his victim, I expected that something like regret would appear in the author of such a cruel act; but, whatever may have been his inner feeling, nothing in him changed—he remained calm, and through the tears which filled my eyes I saw his face like that of a severe and impassible judge."

Ségur describes the camp at Boulogne and the preparations for the invasion of England. The Emperor (for the First Consul had been proclaimed Emperor), after Pichegru's conspiracy, learned on the 13th of August, at his headquarters at Port-de-Briques, at four o'clock in the morning, the news which rendered the invasion of England impossible. The French admiral, Villeneuve, had taken the fleet to Ferrol and left the Channel.

"Daru was called. He enters, looks at his chief, and is surprised. His air, he told me, was terrible; his hat was over his eyes; his look was terrific. As soon as he sees Daru he rushes at him: 'Do you know where this scoundrel of a Villeneuve is? He is at Ferrol—do you understand? At Ferrol. Ah! you don't understand? He has been beaten, he has gone to Ferrol to conceal himself. He will be blockaded there. What a navy! What an admiral! What useless sacrifices!' Then, with redoubled agitation, for more than an hour, he paces the room with great strides, giving vent to his just fury in a torrent of bitter reproaches and painful words. Then, suddenly stopping and showing a table covered with papers, 'Sit there,' he says to Daru, 'and write.' And then, without a transition, without any apparent meditation, with his brief and imperious accent, he dictates to him, without hesitation, the plan of the campaign of Ulm as far as Vienna! The army of the coast, fronting the ocean for more than two hundred leagues, was at the first signal to turn round and march on the Danube, in several columns! The order of the marches, their duration, points of concentration, of reunion of the columns, surprises, attacks, various movements, the enemy's mistakes—all was foreseen. . . . The battlefields, the victories, even the dates on which we were to enter Munich and Vienna—all was then written just as it happened, and this two months in advance, at this very hour of the 13th of August, and from this quarter-general on the coast. Daru, however accustomed to the inspirations of his chief, remained dumbfounded, and he was even more surprised when afterwards he saw these oracles realized."

This extract gives not a bad idea of the graphic manner of Ségur. It is impossible to read anything more interesting than his account of the battle of Austerlitz, which was the termination of the great campaign that had carried Napoleon from Boulogne to Ulm, from Ulm to Vienna. This famous battle, fought on the 2d of December, was planned by Napoleon, in every detail, just as he had planned the strategic movements of the army. In the early morning he sent for all his aides-de-camp to come to the small house where he had spent the night. "We had a slight repast, which, like himself, we ate standing; after which, putting on his sword, 'Now, gentlemen,' said he, 'let us go and begin a great day.' We all ran to our horses. A moment afterwards we saw, on the top of the hill which the soldiers called the Emperor's hill, arriving from the various points of our line, followed each by their aides-de-camp, all the chiefs of our army corps."

The memoirs, or rather the extracts of the memoirs, which are now given to us, though they are almost exclusively military, are all written in this graphic style. Ségur takes us to Italy before Gaeta, to Jena, to Berlin, to Spain. At the end of the volume are some curious chapters on Fouché and Bernadotte. The last chapter is the history of the relations of Bonaparte with Chateaubriand and the history of the reception of Chateaubriand into the French Academy. Napoleon asked for some changes in Chateaubriand's reception speech, which had first been read, as usual, in committee. Chateaubriand would not consent to make the changes, and in consequence he was never really received officially into the Academy before the Restoration.

Correspondence.

ELEAZAR WILLIAMS.

To the Editor of The Nation:

Sir: I send a few facts (as addenda to your criticism of the work of Mrs. Evans, in your issue of May 31) which have been gathered during the quarter of a century I have been working on the Roxbury (Mass.) Williams family. As is probably well known to the writer of the article referred to, Eleazar Williams furnished the late Dr. Stephen W. Williams with a brief sketch of his Williams ancestry; but even that is inaccurate, as it brings in a fabulous ancestor to account for the fact that his family name was "Williams."

As early as 1810, Eleazar Williams called himself "Count de Lorraine" and wore a large tinsel star. My grandfather was acquainted with the man and fully impressed with his ignorance and pretence. The subsequent developments of his fiction brought him to the notice of the family, and it was with this knowledge that my father, Dr. Williams of the Baldwin Locomotive Works, happened to be in Caughnawaga when those of the tribe who knew of the childhood of Eleazar were questioned regarding his origin. Dr. Williams was then locating and laying the railroad through the Indian reservation, and was not only intimately acquainted with Oronhiatekha (De Lorimier), the head chief, with Taiaike (Jean Baptiste Rice, better known as "Grand Baptiste"), the pilot of the Lachine rapids, and other subordinate chiefs, but was adopted by the tribe, and is still remembered by the older members as "Raristeseres."

In the fall of 1851 two gentlemen came to Caughnawaga to investigate the story of Eleazar Williams. It was on a Sunday afternoon that De Lorimier summoned the mother of Eleazar, Mary Ann Rice (Kanontewanteta), and an old man and woman who were with the parents at the time of his birth, as well as others who could tell of his youth. It may be well to say here that Eleazar was in bad odor with the tribe. This fact has been made much of by the upholders of the French origin, and has been stated by them as due to the lapse of the man from the Romish faith, and an attempt to avenge on him the slighted creed. The real facts are that the Romish Church, if it had any feeling in the matter, rejoiced in getting rid of a black sheep, as Eleazar had made his tribe the victims of a favorite habit of his—the collection of money for a specific purpose, and its immediate conversion to his own use.

All the persons gathered on that Sunday afternoon knew of the character of the man, and that was all. They were then entirely ignorant of his pretensions, and spoke only Iroquois and a French *patois*. They were taken singly into the room where they were to be questioned, and a Scotchman named McNab, who was a notary and greatly trusted by the Indians, acted as interrogator and interpreter. The old woman first told how she was present at the birth of Eleazar, and that he was the son of Mary Ann (Rice) Williams, and that the birth took place at Lake George, N. Y., where the party had gone on a fishing excursion. It was immediately after the Revolution. The old man followed and said that the birth took place as stated, and he further told how Eleazar had fallen from high rocks when a boy and received injuries to his legs and knees that had left scars. The mother then told her story in corroboration of what had been told. After all the testimony had been taken, there was no one present but felt that Eleazar Williams was an Indian. Mr. McNab then translated to them the printed account of the pretended French origin of the man. It made the mother cry, and she said that she knew that Eleazar had done many bad things, but she did not think he would deny his own mother. The matter was talked over by the tribe, and they did not hesitate to call him a liar. The peculiar (?) Bourbon features of Eleazar were possessed by De Lorimier, Francis Mount—by all, in fact, who were descended from white captives.

Father Marcoux stated to my father that the early mission records were very incomplete, and, in general, those children born outside of the mission had no place on the record. This seems to cover the whole case.

EDWARD H. WILLIAMS, JR.

WENTWORTH, June 4, 1894.

DEFINITIONS OF COST.

TO THE EDITOR OF THE NATION:

SIR: Being wholly destitute of the metaphysical gift, it strikes me as a bit too hard, especially on the metaphysicians, to find myself held up as the example of what a man may come to in economics by yielding to the metaphysical tendency. My aim in everything I have written has been to call attention to facts which others seemed to overlook; and that is my aim now. You single out my definition of cost of production as particularly metaphysical, and therefore particularly faulty. In place of it you offer one of your own. You say:

"Economically and humanly speaking, cost is what a man pays for a thing when he buys it. To the manufacturer of the finished article, the cost is what he has paid for his raw materials and the labor he has employed."

Here you seem to me to give, not one consistent definition of cost, but two inconsistent ones. The Macmillans pay two dollars for raw materials and labor in manufacturing a certain book. My bookseller buys it of them for three dollars, and I buy it of him for four dollars. You seem to say that, economically and humanly speaking, the cost of the book is either the three or the four dollars paid for it by the successive buyers. And yet you also seem to say that the cost with which economics ought to be concerned is the other, the cost to the Macmillans. If you will kindly make plain which of these views you would have us adopt, I will try to bring it to the test, not of metaphysics, but of plain fact. You will find economists very ready to learn if you have anything to suggest towards improving their treatment of cost.—Very sincerely yours,

S. M. MACVANE.

CAMBRIDGE, MASS., June 9, 1894.

[We attempted no complete definition of cost; but we do say, in the name of common sense, that cost of a thing is what a man pays for it, or, in other words, its market price. We think economists ought, in the public interest, to occupy themselves solely or mainly with things which they can describe in terms of money. It is their attempts to speculate about *moral* cost, about emotions which do not affect price, and concerning which they cannot in the scientific sense *know* anything, that have brought Marx, and Bebel, and Guesde down on us.—ED. NATION.]

A MUSICAL CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: Allow me to correct two statements that recently appeared in the *Nation*. In the article "The Delphian Hymn to Apollo" (No. 1506), it is stated that the rhythm of 5/8 time is equally unknown to modern verse and modern music. The rhythm of 5-4 time (practically the same as 5/8 time) is found in Liszt's Dante Symphony, Rubinstein's Tower of Babel, Tchaikovsky's last symphony, in works by Raff, Volkmann, Hiller, and Reinecke. Dr. Riemann, the great reformer of musical theory, rather favors rhythms of 5 and 7 beats.

In the review of C. Hubert H. Parry's 'The Art of Music' (No. 1507), we find, after a sweeping condemnation of Brahms's songs (which very few will endorse), "that a thorough study of the 257 songs of Franz," etc. I have all the songs of Franz, and find, on careful counting, their number to be 279.

Yours truly, C. E. R. MUELLER.

CHICAGO, June 1, 1894.

[Our remarks upon 5/8 time were somewhat contradictory, as in a paragraph succeeding the one criticised we spoke of it as "the unusual time." Saint-Saëns, in his last trio, and Chopin in one of his sonatas, employ this time. As for the number of Franz's songs, we followed Grove's Dictionary.—ED. NATION.]

THE OLDEST FOLK-LORE JOURNAL.

TO THE EDITOR OF THE NATION:

SIR: I read in your issue of May 17, p. 375, col. ii., that the *Archivio per lo studio delle tradizioni popolari*, edited by Dr. Pitrè since its inception by him in 1882, is "the oldest folk-lore journal in existence." This is a great mistake, for the first number of the French folk-lore journal *Mélusine*, started by Mr. Eug. Rolland and myself, appeared on the 5th of January, 1877.

Yours faithfully, H. GAIDOZ.

22 RUE SERVANDONI, PARIS.

[Our constant enjoyment of *Mélusine* all these years ought to have served as a check on Pitrè's statement, which we followed with the implicit faith we are accustomed to repose in that scholar's accuracy. He says of the *Archivio*, "che fu il primo fortunato tentativo nel genere, e che rimane sempre il più vecchio periodico vivente di Folklore."—ED. NATION.]

TURGENEFF'S MOTHER.

TO THE EDITOR OF THE NATION:

SIR: Any one who wishes more complete information in English than Mr. Boyesen furnishes in the current *Century* about Ivan Turgeneff's mother can find it in the *Atlantic Monthly* for March, 1885. Mrs. Martin, the writer of the article mentioned, unfortunately was in too great haste to await the second and last instalment of the story of Mme. Turgeneff's adopted daughter, in the *European Messenger* (*Vyestnik Yevropy*); she distorted names and mistook several passages. Nevertheless, a more satisfactory view of that incarnate imp Mme. Turgeneff in action can be obtained from the *Atlantic* than from Mr. Boyesen's summary of the belated French translation.—Yours truly,

ISABEL F. HAPGOOD.

NANTUCKET, MASS., June 9, 1894.

Notes.

MR. GLADSTONE'S metrical translations of the Odes of Horace are in the press of Charles Scribner's Sons, whose removal to No. 153 Fifth Avenue is now an accomplished fact.

Longmans, Green & Co. will publish, in the autumn, 'Studies on the Coast of Arran,' by George Milner.

Du Maurier's 'Trilby,' after having finished its course in the *Magazine*, will be published by the Harpers in August.

'The Claims of Christianity,' by W. S. Lilly, is to be published immediately by D. Appleton & Co.

Henry Holt & Co. promise a collection of 'Quaker Idyls,' by an author bearing a Quaker name, Mrs. S. M. H. Gardner.

'The Footprints of the Jesuits,' by R. W. Thompson, ex-Secretary of the Navy, and a 'History of the Christian Church,' in five volumes, by Henry C. Sheldon of Boston University, are soon to be issued by T. Y. Crowell & Co.

'Electrical Boats and Navigation' is the title of a work, by Thomas Commerford Martin, announced by C. C. Shelley, New York.

'Early Church History,' by J. V. Bartlet, and 'The Printed English Bible,' by Richard Lovett, are the opening volumes of the "Present Day Primers" which Fleming H. Revell Co. will publish.

Mr. John Fiske's new school History of the United States is about to be issued by Houghton, Mifflin & Co.

The following Chautauqua text-books are in preparation by Flood & Vincent, Meadville, Pa., for the next autumn and winter's reading: 'The Growth of the English Nation,' by Profs. Katharine Coman and Elizabeth Kendall of Wellesley College; 'Europe in the Nineteenth Century,' by Prof. H. P. Judson of the University of Chicago; 'Renaissance and Modern Art,' by Prof. William Goodyear of the Brooklyn Institute; 'From Chaucer to Tennyson,' by Prof. Henry A. Beers of Yale University; and 'Walks and Talks in the Geological Field,' by the late Prof. Alexander Winchell of the University of Michigan.

Mme. Octave Feuillet is about to publish, through the house of Calmann Lévy, a volume

entitled 'Quelques Ans de Ma Vie.' *Figaro* of May 20 printed, by way of *primeur*, several letters taken from it. Others still appeared in the *Revue de Paris* a couple of months ago. These letters were written by Octave Feuillet to his wife between the years 1862 and 1868, mostly from Compiègne or Fontainebleau. They are very smooth and pretty, being perhaps a little over-polished for familiar letters. Something may be learned from them of court life in the country under the Second Empire, but it is upon Feuillet himself that the most light is thrown. It is not a very pleasing light either. There is something rather painful in the spectacle of a literary man of mark and of a certain merit making such a disclosure of his own interior and essential snobbishness as Feuillet pours forth.

To an account of the Napoleonic revival the ninth volume of Paul Ginisty's 'L'Année Littéraire' (Paris: Charpentier) gives large room, in successive reviews. The novel has, as usual, the lion's share of titles, though by no means of space. There is a brief preface by Henry Houssaye, very appropriately, since half the volume is devoted to notices of historical works.

Charles Benoist's 'La Politique' is the first volume of a series to be brought out by Léon Chailley, Paris, under the general title "La Vie Nationale." The editors are M. Benoist and M. André Liesse. The object of the series is to enable the general public, usually ill-informed on important questions, to attain a sound knowledge of the political constitution of France, of its commerce, of its methods and establishments of education, and many more similar matters. The several works will, as a rule, be divided into two parts: the first, theoretical or historical; the second, practical. It is on this principle that 'La Politique' has been written, and it forms a very valuable hand-book for any one desirous of obtaining a clear and concise exposition of the French constitution and of its workings.

M. Jules Bois was well inspired when he bethought himself of giving an account of the various minor creeds which flourish, more or less, in Paris. The result, 'Les Petites Religions de Paris' (Paris: Léon Chailley), is, however, so slight and so evidently incomplete as to cause more regret than pleasure.

The Leipzig publishers Schmidt & Günther are now issuing an extremely attractive and instructive work entitled 'Das Mittelalter: Bilder aus dem Leben und Treiben aller Stände in Europa,' by Rudolf Kleinpaul. It will be completed in twenty-five numbers, which are sold at one mark each, and about half of which have already appeared, and will contain some five hundred illustrations consisting of reproductions of old engravings and colored plates. The text is based upon the voluminous works of Paul Lacroix ("Bibliophile Jacob") supplemented by more recent researches, and will describe mediæval life and civilization in all their phases, political, social, domestic, industrial, artistic, etc. The name of Herr Kleinpaul is a sufficient guarantee that it will be written in a lively vein.

Students of Middle High German will welcome Wolfgang Golther's new and revised edition of Karl Bartsch's anthology, 'Deutsche Liederdichter des zwölften bis vierzehnten Jahrhunderts' (Stuttgart: Goeschen). Bartsch's selections are excellent, and remain the same as in the edition of 1878; the text has been in some cases slightly modified, the notes have been corrected and considerably enlarged, the glossary improved, and the literature of the subject brought up to date. As a text-book it is now as nearly perfect as it is possible for such a work to be.

The latest issue of the "Mermaid Series," the publication of which, after being for some years suspended, has now been resumed by T. Fisher Unwin, is 'The Complete Plays of Richard Steele.' The editor, Mr. G. A. Aitkin, is well known to students of eighteenth-century literature as the author of an exceedingly detailed and accurate biography of Steele. The present volume is the more welcome from the fact that there has really never been a complete and uniform edition of Steele's plays. It is to his less-known works, moreover, that we must look in order to correct such current ideas of his character and his genius as are derived mainly from the reading of his papers in the *Tatler* and the *Spectator*—essays delicate and charming enough, no doubt, but decidedly less free and virile in tone and scope than his letters, some of his pamphlets, and his dramatic works. Steele's plays, indeed, are almost as well worth reading as those of his more famous contemporaries, Congreve and Vanbrugh. Though weak in plot, like much of the best work of the period, they have a genuine spice of wit, as well as a cleanliness of tone and purpose and a fondness for noble and charming characters not then common, and eminently characteristic of Steele. The editor's notes are largely biographical and topographical.

A rather conspicuous little book comes dancing along in the wake of the Columbian fervor, in Dr. M. Kayserling's 'Columbus, and the Participation of the Jews in the Spanish and Portuguese Discoveries,' done into English from the author's manuscript by Dr. Gross of Harvard and published by the Longmans. It has an appendix of Latin and Spanish documents, setting forth the doings of the Santangels—shown to be Jews—and disclosing the help of Jews in equipping the second expedition of Columbus. The career of the Genoan is scantily followed, and the stress of the book, as well as its distinctive merit, is in making known the manifold ways in which Jewish learning and activity were interwoven in the events which floated Columbus along to his honors and his shame.

The works of the "Austrian school" of economists have been so generally read that it is unnecessary to do more than call attention to the excellence of the edition of Von Wieser's 'Natural Value' by Mr. W. Smart, published by Macmillan. The translation was made by Mr. Christian A. Malloch under Mr. Smart's supervision, and is admirably clear, although elegance may have been in some cases sacrificed to fidelity. The most convenient feature of the work is the preface and analysis furnished by Mr. Smart, who may be said to have mastered the theory of value maintained by the Austrian school. This "natural value" he regards as substantially completing the development of the system at which Menger, Boehm-Bawerk, and Wieser have labored, as it "catches up many loose ends in previous expositions, and carries the whole theory, with its applications, to a higher level of completeness."

Mr. Andrew Lang has an apologetic rôle in his introductions to both 'Peveril of the Peak' and 'The Fortunes of Nigel' in volumes 26–30 of the International Limited Edition (Boston: Estes & Lauriat; New York: Bryan, Taylor & Co.). The illustrations, besides the Tower of London and a few portraits, are imaginative, of the academic sort, but are on the whole as good as those accompanying the better Waverley novels. In the cheaper Dryburgh Edition (Edinburgh: Black; New York: Macmillan), the series is continued with 'The Fair Maid of Perth,' forming volume 22.

We lately noticed the final instalment of Mr. Robert Bowes's 'Catalogue of Books Printed at or Relating to the University, Town, and County of Cambridge from 1521 to 1893, with bibliographical and biographical notes' (Macmillan). The work as now issued bound is an extremely handsome volume of more than 500 pages and 3,000 items, each with its price affixed; for though something more than the spirit of gain has prompted this laborious and elegant performance, a bookseller describes his actual stock in hand and invites dealings. Charles Astor Bristed, with his 'American Hospitality and English Repudiation' and 'Five Years in an English University,' and William Everett, with his 'On the Cam,' are the sole Americans we have recognized in this list.

A fifth edition, revised and enlarged, of 'The Records of Living Officers of the U. S. Navy and Marine Corps' (Philadelphia: L. R. Hamersly & Co.) fulfils the pious motive of the author-publisher to supply "the recording journalist" with materials for proper obituary notice of members of the naval branch of the service. Its utility has long since been proved.

Emerson's verse to Lowell on the younger bard's fortieth birthday opens the volume of the *Century* now completed and bound (new series, xxv.), and there is none that follows which can approach it. Lowell's prose aftermath is among the more excellent contents of the rest of the volume, along with memorials of Edwin Booth and a contribution to the prevailing Napoleonic recrudescence. The musical papers give excuse for some fine portraits of Berlioz, Schumann, and Grieg; those on Lincoln (of which one, by Mr. Nicolay, gives the variant readings of the Gettysburg address) are adorned with a new likeness of him also; and very pathetic is the view of Grant heroically composing his Life in his last illness. Mr. Cole supplies many admirable renderings of the Dutch masters. Finally, Mark Twain begins his "Pudd'nhead Wilson."

An article on "The Future of the West Indies and the Nicaragua Canal," by Major Otto von Wachs, in the May number of the *Deutsche Rundschau*, has also been reprinted in pamphlet form. Starting with the assumption that the Panama Canal will never be completed while the Nicaragua Canal will, the writer predicts a conflict of influence—and hardly a peaceful one—between Great Britain and the United States for the control of the new waterway and its approaches. He accordingly takes up and discusses the neighboring coasts and islands from the point of view of the strategical importance they will have, but leaves us in distressing uncertainty as to how soon we may expect the struggle to break out or what will be its probable issue.

Petermann's Mitteilungen for May opens with a brief sketch of the latest Italian explorations in eastern Africa, accompanied by a somewhat confused map showing what has been determined in regard to the courses of the main rivers of Galla and Somali-land. The expedition led by Count Ruspoli, whose objective point was Lake Rudolf, has been obliged to return to the coast; its leader, a young man of brilliant promise as a successful explorer, having been killed in an elephant hunt on December 4, 1893. There is also a rather dull and technical account of the expedition of the Imperial Russian Geographical Society, under the command of Capt. Roborovski, which is now exploring a part of eastern Turkestan not far from the district of

Kuldja. It is not improbably one of those expeditions, half geographical, half political in their aim, which generally precede the extension of Russian territory to the south.

The latest number of the *National Geographic Magazine* is an essay by Messrs. Hayes and Campbell on the geomorphology of the Southern Appalachians—that is, on the origin of the physical features of the region. Following methods employed by McGee and Davis, the authors greatly extend the results previously acquired, both in area and in definiteness. Indeed, it is not too much to say that no essay of recent years has given so much precision to our understanding of the development of Appalachian topography. Geological students in this part of the country see so little of Tertiary deposits that they unconsciously come to regard Tertiary time as of relatively small value; and they will therefore look with surprise at the large share of altitude that is here shown to have been given to our Appalachian ridges at even a late stage of the Tertiary. The recognition of areas and axes of maximum uplift, and the effects of these movements as well as of geological structure on the shifts of river courses, are admirably brought out. The development of the course of the Tennessee River in particular is deciphered with much skill; and if the reader perhaps hesitates to accept all the details of this remarkable piece of river history, he will still find that the account of it will whet his appetite for more discussions of this kind. That so much of novelty comes from a study of the eastern part of the country, long known to geological surveyors, proves how great a harvest may be expected when modern methods of investigation are applied elsewhere.

The quarter-century of President Eliot's headship of Harvard College forms the natural leading theme of the *Harvard Graduates' Magazine* for June, and is strikingly reviewed from different standpoints by Prof. Dunbar and the editor, Mr. Wm. R. Thayer. Two profile portraits of the President are given, one by Kruell, the other a reproduction of the class portrait of 1853, seemingly from a daguerreotype—at all events reversed, and hence impairing the comparison with what is the same aspect in the frontispiece. The new constitution of Radcliffe College is to have the effect of causing this morganatic branch of the University to be reported regularly in the *Magazine*.

When periodicals of the bulk and value of the *Revue des Deux Mondes* and the *Revue de Paris* are pouring out their abundance every fortnight, it is not too easy to keep the run of them, and quite hopeless to attempt to notice a tithe of what is noteworthy. But, however late, some mention is due to a most interesting and tenderly affectionate article on the lamented Prévost-Paradol, by his friend M. Eugène Dufeuille, which appeared in the *Revue de Paris* of March 15. This throws some new light on one of the most moving tragedies of our time. There never was a more pitiable and needless waste than Prévost's self-sought death. The memory of his incomplete life will last at any rate as long as his generation does, as this article witnesses, as well as other tributes, like the recent one of M. Gaston Deschamps in the *Temps*.

We learn from Dr. Murray, who is passing the letter D of the New English Dictionary through the press, that American readers can render a great assistance by noting early instances of *all* the terms of American politics, since this research is very difficult if undertaken in England. Examples of the use of such terms, duly authenticated by chapter and verse (author, edition, volume, page), with date, should be forwarded to "Dr. Murray, Oxford, England," no other address being necessary.

—The third volume of the writings of Jefferson, which the Messrs. Putnam are publishing, testifies to Mr. Paul Leicester Ford's editorial capacity and diligence. It embraces the 'Notes on Virginia,' of which the genesis, publication, and additions are very fully set forth, and the appendices incorporated in their proper places as notes. Jefferson's map is reproduced, there is a facsimile of his title-page, and the variant readings of the several issues of 1784, 1787, and 1853 are given, so that, as Mr. Ford justly claims, all that is germane and valuable in each has been collected here. In the letters to Madison, which in the original are mixed up with cipher, Mr. Ford has been at the pains to read and translate, as far as possible, and his success has been worth the pains. The volume opens at 1781, when Jefferson was on the point of retiring from the Governorship of Virginia, and was looking forward to a life of contemplative and scholarly retirement, with (as he avowed) every spark of political ambition thoroughly eradicated. In this mood he discusses the natural limitation of a man's duty to serve the state, and concludes against the state's right to command the service of any of its members in perpetuity —a doctrine half revived in our day in an anti-Jeffersonian quarter, viz., by Mr. C. F. Adams, in his study of the government of the city of Quincy, Mass. The death of his wife in childbed made a return to public life a diversion for Jefferson, and the volume closes with his departure from Boston on July 5, 1784, as Minister to France, carrying in manuscript his 'Notes on Virginia.' He had just studied, also, the New England States of New Hampshire, Massachusetts, Connecticut, and Rhode Island by journeying among them, in order to fit himself for his post; and it is to be regretted that he forebore, in his farewell to Madison, "to enter into a detail, which would be lengthy, as to the country and people I have visited." Mr. Ford prints Jefferson's two reports on the Northwest Territory, of March 1 and 22, 1784, had either of which been adopted without amendment, slavery would in terms have been abolished in all the Western territory after 1800. It was the South that killed this anti-slavery provision, by one vote. Mr. Ford shows that Jefferson, when the spark of his political ambition had become a healthy flame, remembered to forget this his highest title to statesmanship, and suffered the framers of the Ordinance of 1787 to steal his thunder without rebuke.

—All students of British history have read, in some form or other, the story of Theobald Wolfe Tone's life and death. Most of those who have collected historical libraries would desire to see his autobiography upon their shelves. The only complete edition that has appeared is scarce and is to be had but occasionally at sales. We gladly welcome Mr. Unwin's new publication (Charles Scribner's Sons), edited by Mr. Barry O'Brien. The first memoir of Tone, "the complete edition" to which we refer, appeared at Washington in 1826 in two octavo volumes. The two volumes published in London the same year consisted of excerpts from the American. The various popular editions which each subsequent wave of Irish disaffection called forth were little better than chap-books and necessarily abridgments of the original work—we refer, of course, to the London edition of 1827, the Dublin of a few years later, and the Glasgow of 1876. We are now given the whole of the memoirs and all that is of permanent value in Tone's writings, preceded by a luminous introduction of twenty-three pages from Mr. O'Brien's pen, and a sparkling preface of seven pages by Mr. Augustine Birrell. The portraits are old friends to students of Irish history, none the less valuable on that account to those who do not possess them in other volumes. The facsimile of Tone's touching last letter to his father is for the first time published. An index adds to the value of the work. The editor has done his part well. We must, however, be allowed to enter our protest against the unnecessary thickness of the paper, size of the type, and width of the lines and margins. Economy of space has to be considered nowadays on our book-shelves. These two volumes, with considerably less matter, bulk nearly twice the size of the original edition of 1826, that which we have hitherto been accustomed to use, and which is also in two volumes, but in every way pleasant to read and handle.

—Those attached to the memory of Shelley—and few in England and America would range themselves among his ill-wishers—have watched with interest the centring at Oxford of various Shelley records. University College, which thrust him from its doors for what would now be regarded as a more or less harmless and youthful effervescence of thought, has recognized his greatness by accepting and giving a place of special honor to Onslow Ford's beautiful statue of him. Bodley's librarian has recently expressed the gratitude so universally felt for Lady Shelley's gift of portraits of the poet and of books and MSS. belonging to him. Lady Shelley has within a few weeks further enriched the Bodleian by a gift of various Shelley relics. These include a portrait, painted after death, of Mary Wollstonecraft Shelley, a watch and chain, with seals attached, which belonged to her and the poet, and a case containing locks of her hair and of the poet's. The portrait in question is, of course, very valuable and a most acceptable gift; but as to the watch and seals and as to the locks of hair, many will feel that just such peculiarly intimate mementoes as personal friends and members of the immediate family most prize have little or no value in any public institution. Even if it were agreed that such things might, in exceptional cases, figure appropriately in small museums, the notion of exhibiting them in a place like the Bodleian Library at Oxford will not commend itself to many. Indeed, there will not be lacking people who may see in the acceptance of such gifts by such an institution in England a symptom of that minute and ultra-sentimental hero-worship which provokes derision and drags prosaic personal gossip into literary history. This sentimentalism has hitherto been supposed to connect itself with the German Goethe worship, and is reproached with giving undue prominence to that great man's washing bills. It is to be hoped that no further relics of so intimate a character will be added to the Oxford mementoes of Shelley.

—M. Reinach's publication of Hamdi Bey's Sidon Sarcophagi being still delayed, Prof. Percy Gardner has just given a most timely public lecture upon them at Oxford. After a sketch of the discovery of the royal tomb at Sidon and of Hamdi's ultimate extrication of the famous colored bas-reliefs now exhibited under glass in the Constantinople Museum, Prof. Gardner summarized his views upon the use of color in Greek sculpture, laying some

stress upon the fact that the marble of these sarcophagi was stained and not simply covered with an opaque and evanescent surface-color. Early Greek sculpture, whether forming part of an architectural whole or fashioned in the round, was always colored. As rough stone gave way to more delicate marbles for sculptures in the round, a practice akin to "tinting" arose, but the colors used in architecture always required the more brilliant scale of color for reliefs shown upon temples and for sarcophagi such as these. Accepting for convenience the usual names of these four tombs, the lecturer examined them with the help of M. Reinach's heliogravure plates (by Dujardin) and determined their chronological order. The earliest is the "Lycian tomb." Its representation of a lion-hunt in chariots is Oriental, while the boar-hunt on horseback is more after the Greek fashion. Its centaurs, riders and sphinxes, as well as the whole manner of its sculpture, suggest the Parthenon reliefs. No historical clüe to show whose tomb it was could be found, and the same was true of the second, the "Tomb of the mourning women." Here was an artistic triumph—eighteen mourners all expressing, but individually, one restrained mode of grief. The manner was that of the second Attic school, and the nearest analogy to be found in the nine Muses of that school or in certain Athenian sepulchral reliefs. About the third, "Tomb of the Satrap," it was at least evident that a father of some note and power and his son were involved. The style was less purely Greek than that of the other three sarcophagi, and the nearest parallel was the so-called Nereid monument of Xanthus. Last chronologically, but first in all other respects, was the tomb miscalled "Alexander's tomb." It certainly belonged to the time of Alexander; so much was evident from the style and the incidents represented. There was a very marked contrast between these compositions and those of the Mausoleum. The art here exemplified was something new under the sun, and showed great perfections of balance, composition, and proportion. One of the horsemen might well be Alexander, since there was a close resemblance to a group in the Pompeian mosaic of the battle of Issus, where Alexander appears. Hephæstion might also be plausibly identified, and the tomb could be supposed to be that of the Sidonian King set up at Alexander's command by Hephæstion.

—In an address delivered before the Société de Géographie in Paris on May 4, the African explorer Dybowski referred to Mr. Garner's recent sojourn in the jungles of the Congo for the purpose of learning the language of the gorillas from their own lips. Dybowski stated that he passed two days at the mission of Fernand Vaz, situated on the shore of the lake bearing the same name. The superior, Father Bichet, informed him that Mr. Garner had spent three months there, not in the deep forest, but at the mission itself, evidently preferring the society of the monks to that of the monkeys. Mr. Garner brought his famous cage with him and set it up at a place which he called Fort Gorillas, on the edge of the forest just twenty-eight minutes' walk from the mission and within hearing of the church-bells. Dybowski expresses a doubt whether "the apes, however strong their instincts of civilization, ever came so near the convent to perform their religious devotions." The negro boy Rozoungé, a youth about thirteen or fourteen years of age, who speaks French very well and accompanied Mr. Garner on his excursions, confirmed the statements of Father Bichet, and added that Mr. Garner had slept three nights in the cage, where he awaited in vain the visits of the chimpanzees and gorillas. The boy thinks they heard them one evening, and that is the extent of Mr. Garner's intercourse with these great anthropoid apes in their wild state. He succeeded, however, in buying a young chimpanzee, which he named Moses, but which soon died. He then expended sixteen dollars in the purchase of a young gorilla, which survived only a few days. He then left the mission, where he had paid five francs a day for board and lodging, and set out with Father Buléon of the Congregation of the Holy Ghost on a tour to the Eshiras, a tribe of the interior. After two days' travel he was taken with a severe pain in his legs, and had to be carried in a hammock to the Tomlinson factory, where he remained two months. On recovery he embarked for Europe, taking with him his cage and the elements of his dictionary of the simian tongue. Dybowski says that the phonograph which was to catch the sounds uttered by the apes, and to record them on a cylinder, never arrived, so that Mr. Garner had to carry on his investigations without the aid of this instrument. *Figaro*, which reports Dybowski's remarks, characterizes Mr. Garner as an amateur in comparative linguistics, who has succeeded in having himself taken seriously, but who proves to be "un simple fumiste."

—M. A. Gazier, Maître de Conférences of the Paris Faculty of Letters, was beyond doubt happily inspired when he undertook the work of seeking for fresh light on one of the obscurer periods in the history of education in France by going through the voluminous correspondence of Grégoire, the well-known Bishop of Blois, who was also President of the Convention. The state of education during the Revolution is a difficult subject at the best, and it has been made indefinitely harder and more tangled by overmuch disputing among the erudite. It has been discussed with passion. Optimists and pessimists have seen it all black, or all white, after their usual fashion, and they do not seem likely to come to any agreement. In this confusion of opposing documents, the patient student is fain to ask for something more, and something more impartial. This, it appears, he is likely to get from the correspondence of Grégoire. Grégoire's position made him to a considerable extent a natural confidant of several parties or groups. A confirmed, and even passionate, Republican, he never lost the sense of being also an ecclesiastic and a bishop, though his churchmanship was of a distinctly Erastian type. He refused to join with the Archbishop of Paris in the cultus of the goddess Reason. He wished to "Christianize the Revolution." This attitude of his caused him to be sought as an adviser by many of those into whose hands, up to that time, French education had been for the most part committed. Priests and curés, republicans in their politics, wrote to him from all parts of the country, and questions of education naturally mingled in their letters with questions of religion. The evidence they afford is all the more trustworthy because the letters are of the character of a casual correspondence, quite unconcerted, giving news of passing events, and showing no more "tendency" than can be easily corrected from a knowledge of the personal equation of the writers. Grégoire's correspondence embraces the whole of France, and extends from the ninth Thermidor to the signing of the Concordat. M. Gazier has extracted from it whatever bears upon questions of education, and offers the documents to his readers without note or comment, like the exhibits in a law case. They are arranged in a rigorously chronological order, but divided and under the three heads of primary, secondary, and the higher teaching. The first instalment of them appeared in the *Revue Internationale de l'Enseignement* of May 15. In a brief introduction to this, M. Gazier points out that a good deal of information about schools in France in the year 1790 may be found in the "Lettres à Grégoire sur les patois de France," published many years ago.

—We have before us the French version of a recent pamphlet issued by the League for the Intellectual Culture of the Rumanians. Besides texts of laws, protests, etc., its chief contents is the memorandum of grievances addressed to the sovereign of Austria-Hungary in 1892. Those concerned in drawing it up have just been condemned to terms of imprisonment varying from eight months to five years. There can be little doubt, however, of the truth of its statements, and of the fact that the Rumanians, Germans, and Slavs in Hungary have much to complain of. The process of Magyarization is being ruthlessly carried out, and the exasperation of the weaker nationalities is very great. At Pesth it is apparently believed to be necessary for the future welfare and tranquillity of the country that the growth of the dominant race should be favored in every way. This may be sound policy in the end, though neither generous nor just, but it bears hard on minorities attached to their own languages and historical rights, now at the tender mercy of the Magyars. One circumstance that has particularly angered the latter is the fact that the document in question was addressed to Francis Joseph, not merely as King of Hungary, but also as Emperor, thereby implying that the petitioners do not accept the present arrangement or regard themselves as only Hungarian citizens with no wishes beyond. To understand the importance of this we must remember how tremendously sensitive the Magyars are, and also that the Rumanians of Transylvania (the great majority of the population, although almost without political rights) protested against reunion to Hungary in 1868. The trial that has just taken place not only will embitter still further the race question within the kingdom, but cannot fail to excite the angriest feelings at Bucharest, where the brethren beyond the mountains are by no means forgotten, and it will put a strain on the sympathies of Rumania for the Triple Alliance.

THE NATIVES OF CENTRAL BRAZIL.

Unter den Naturvölkern Zentral-Brasiliens: Reiseschilderung und Ergebnisse der zweiten Schingú-Expedition, 1887-1888. Von Karl von den Steinen, Prof. Dr. Berlin: Dietrich Reimer. 1894. 8vo, pp. xvi, 570.

THIS important work by the well-known traveller Von den Steinen possesses unusual interest, not only from the novelty of its contents, but also because of the author's lively style, the striking psychological cogency of his observations, his power of imagination, which is always held within due limits, and the sound scientific spirit pervading the book even to the smallest detail. Three years after the two cousins Von den Steinen, accompanied by Dr. O. Clauss, had visited, in 1884, the province of Matto Grosso, and navigated the entire Xingú River from its headwaters northward to its confluence with the Amazon River,

they, together with Dr. Paul Ehrenreich and Dr. Peter Vogel, started out afresh with the intention of exploring and surveying anthropologically and linguistically an affluent of the Xingú, the Kulisehu. This second expedition was equipped with funds furnished through the "Humboldtstiftung" of the Royal Prussian Academy of Sciences and the "Karl-Ritterstiftung" of the Berlin Gesellschaft für Erdkunde. Many delays were experienced and a host of difficulties encountered in the collecting of valuable ethnographic specimens for the Royal Museum of Ethnography at Berlin, but, nothing daunted, these fearless and well-disciplined travellers accomplished their purpose, though the expedition was prolonged into the following year. Besides eight Bakaïri settlements, they found on the grassy and timbered shores of the river seven tribes heretofore entirely unknown to the whites, even by name, but which subsequently proved to belong to four different families. Twenty-five tribes, dwelling in as many towns or settlements, were examined; on the San Lourenço River the last of them, the highly interesting hunter tribe of the Bororó, being studied with especial care. This inoffensive people is settled upon a military reservation, and their language appears to be *sui generis*.

The aborigines of the Xingú basin apply the most varied body-paints to their skins, but they never paint themselves white. They likewise prefer red or blue beads to white ones, and make no use of white clay. Chiefly for the purpose of screening their bodies from mosquitoes and flies, they mix their paints with oil, which keeps the skin moist and also serves as a garment of the kind of which they are most in need, for they go stark naked. A man will ornament himself in front with a broad black stripe from the nose down to the abdomen, with stripes on either side extending to the shoulders. Large dots may be found upon his chest and arms, wavy lines upon the thighs, and half circles of many colors upon his back. Sometimes animals or plants figure in these decorations. Those who are able to obtain cotton ribbons delight in wearing them around their legs and arms.

Linguistic researches had to be made by gestures and signs, for none of the natives were acquainted with Portuguese. The Indians' replies were, of course, indefinite, and generally gave more than was asked for. The showing of pictures of domesticated animals proved helpful. The Bakaïri called a mirror shown them "water," a pair of scissors *piranya* (=teeth); a compass was to them "the sun," a watch "the moon." A want of generic terms was perceptible in that they had, for instance, no equivalent for our *palm* and *parrot*. The pantomimic language, in which all the tribes are proficient, renders the acquisition of neighboring languages comparatively unnecessary. Gesture language affords an excellent means of satirizing peculiar habits and customs. The Suyá are made fun of for their lip-plug, or *botoco*. The Bakaïri, who use stone axes, are ridiculed by such Caribs as have advanced far enough to adopt steel axes: witness the graphic story told by one of the latter on p. 71.

Dr. Karl von den Steinen having previously published an extensive work upon the Bakaïri language (Leipzig, 1892), has refrained from enlarging upon it in his present work, except as to numerals. The art of counting is exceedingly simple, and very much resembles that of Australians, who do not go beyond two. But the Tamanaco, kinsmen of the Bakaïri, on the Orinoco, go beyond that, for they possess a numeral for five, another for twenty, and hence have adopted the quinary system. Counting by fingers suits savages better than by numerals; the right hand is the counter and "feeler" of the Bakaïri, the left hand their calculator. Prolonged inquiry has convinced the author that the number two originated in these tribes from the occurrence of organs and members (eyes, arms, wings), in *pairs*. In Tupi two is *mokoi*, "forms pairs." None of the Kulisehu tribes possess the higher numerals, for they have absolutely no use for them.

From his field-notes the author reproduces a large array of drawings, made at his request by various Indians, old and young. They were drawn either on the bark of trees or in the sand, or were pencilled on paper; they are highly amusing. Persons are all represented full-face, none in profile. For heads and beards more interest was shown than for the rest of the body, and animals were drawn with more accuracy than men, perhaps because they had to sketch them in profile. Masks of all descriptions were extensively collected by the expedition; the volume contains drawings of more than thirty, with flowing hair and all sorts of toggery covering the entire person. Masks are made either of wood, wax, or of various tissues; rhomboids and squares with geometric lines form the principal ornamentation. The numerous dances in which all these Indians gayly indulge every year involve the production of an immense number of new masks, dance clubs, head-dresses, feather ornaments, and "whirring blades." This remarkable implement is often carved in the form of a fish, and, on account of the weird and unearthly sound it produces when swung on a string, also serves in the celebration of their religious mysteries. Among the Bororó the whirring stick is used only at funerals; hence that tribe speaks of it with genuine terror, women are not permitted to look at it, and, as the old saying is, "they die at the sight of it."

The fundamental shapes of the Kulisehu pottery cups are the half-oval and the half-globe, which are all made by the women of the Maipure tribes. In general they are coarse reproductions of animal forms. Bats are more frequently represented than owls, pigeons, hawks, armadillos, martens, sloths, toads, lizards, turtles, fish, and certain fruits. The ingenuity of the Indian women is shown to better advantage in the manufacture of spinning-whirls, gourd-cups and other vessels, wax and wooden figures, shells, combs; dolls made of clay, straw, and rags, and other pretty objects. Small figures of straw or maize-husks are sent as invitations to a dance, and when a young woman of any tribe receives one of these neat little articles, representing the human figure, we may be sure she cannot refuse giving her consent to join a dance the next evening. We remark, by the way, that when, the daughter of a chief having furnished the leader of the expedition a heavy load of grain and Indian corn, he presented her with a large German doll with ruddy cheeks and long flowing blonde hair, the joy of the girl and her companions was indescribable.

The theory of medicine among these primitive people is on a level with their therapeutics. The conjurers or medicine-men are compelled to undergo a severe siege of fasts and initiation sufficient to crush all physical desires in them. One of their chief "arts" is the skilful use of poisons; hence they are greatly feared by the people, who are perfectly convinced of the fact that a conjurer kills himself with poison in order to be changed into another being. The poison is prepared from the stings of wasps, of the tocandyra ant, and of other similar insects, and mixed in a gourd with resin and vegetable oils. Human hair is also used as an ingredient to produce headache. Every disease is believed to be caused by sorcery, and the sorcerers causing them are not supposed to be in the same place with the patient, but are the medicine-men of other villages working at a distance. To become proficient in the art of shooting fish, Indians have to live an entire month solely on starch-mush. Sore eyes are treated in the most barbarous manner: the most violent inflammations are supposed to be cured by blowing tobacco smoke on them. The Indians also believe that the eyesight may be greatly improved by pulling out the eyelashes one by one.

The Brazilian Indians of the Kulisehu are great dancers. The dances, which resemble each other very much throughout the region, consist in running round in a circle, and a specially accented song accompanies each of them, the emphasis being marked by stamping of the feet. The principal dances are always performed in masks, after the bringing in of the crops, and often last all night. They take place in a special structure called the flute-house, so called on account of flutes seen hanging from the walls of the enclosure. It is a centre for all merry-makings in the villages, though for men only, as women are not allowed to enter it. Dancing is so closely identified with singing that the Bakaïri tribe use the same word for both acts (*okitavo*).

In bodily appearance the Indians do not differ much among themselves. Men and women, living constantly in the fresh, pure air of their prairies, having plenty of physical exercise, are naturally robust, stout, and healthy, though the annual heavy showers are apt to make them temporarily ill. Dr. Ehrenreich had charge of the anthropometrical department, and found an average of 161.9 centimetres for the height of 68 males measured, and 151.7 centimetres for 31 women. The Mehinakú furnished men of the most powerful stature; the Auetö' all appeared to be thick-headed to a great degree. A look at the photographs will teach the general reader more than all the figures in the book combined. The men weed out their beards as effectually as possible, and also the hair on the eyelids and the pubis. They have combs, but seldom use them. Body-painting is their great delight, and a red oil made of the uruku-plant is put on the hair as well as on the body. Shaving the head is common with many tribes of South America, and was practised by them long before the tonsured European priests or monks came among them. The Coroado and Motilone derive their name from this custom, and many individuals upon the Kulisehu also indulge in it.

The women of the tribes visited are not overtaxed with work, although they carry more burdens than the men; neither are they spoiled by expressions of love and flattery, for the system of polygamy alone, if not other causes, would prevent this. Among the Bororó, conjugal relations are of a peculiar description. Family men of a settled age inhabit cabins with their families, but there is an institution called the "men's house," comprising all the unmarried men of the tribe, who separate into clubs or bands for the purpose of capturing young girls. These they bring to the "bachelors' bower," consider them common property, and live with them; but they must be careful to abduct only women who belong to their own tribe. On the Kulisehu River lawful marriages may be consummated between individuals of any tribes, for endogamy does not

exist there. The sons of a mother belong to her tribe, not to that of the father, and the authority of the mother's eldest brother is at least equal to that of the father. The *couvade* exists in the strictest form. At birth the father severs the umbilical cord with a sharp stone. He cares for the new-born infant and fasts resolutely, depriving himself chiefly of the use of fruits, meat, and fish. While the mother has resumed her daily work, he is bound to stay with the child and to fast until the severed umbilical cord has dried and fallen off. Up to this time the father is considered identical with his child.

The multitude of new facts brought to light in the present volume is no doubt very great, but most important of all is the clear and undeniable proof that Tupi, Aruak (or Maipure) and Carib are stocks distinct in race and language. The various vocabularies now obtained of these three families render it certain that they all sprang from locally different sources. It now appears that the Carib race originated far south in Brazil, and spread northward until it reached the coast north of Orinoco River. The Tupi is supposed to have sprung up in southern Brazil also, but its spread was more along the mighty rivers of the interior and along the east coast, while the Maipure or Aruak (the Nu-Aruak of Karl von den Steinen) now extends from Bolivia all the way to the Orinoco, the coast of the Caribbean Sea, the Gulf of Mexico, and was once spoken in the West India Islands. In the drainage basin of the Xingú, nine towns of the Nahuqua and eight of the Bakaïri were found to belong to the Carib stock; to the Tupi, the Kamayurá and the Auetõ´; to the Maipure belong the Mehinakú, the Waurá, the Kustenaú, the Yaulapití, and the Paressí, with one town each. The languages of the Trumaí and of the Bororó stand by themselves and have not been classified. At the end of the volume will be found eleven vocabularies with German definitions, which are intended to substantiate the linguistic divisions adopted. Another chapter deals with the superstitions observed among the white residents of Cuyabá, province of Matto Grosso.

Among the more than two hundred illustrations are thirty full-page plates, in heliotype, phototype, autotype, and lithography, besides 160 illustrations in the text made from the original photographs taken by Wilhelm von den Steinen and Dr. Ehrenreich, and from drawings by Johannes Gehrts. The map (on a scale of 1:500,000) is the work of Dr. Peter Vogel.

SEX PREDOMINANCE IN HISTORICAL DEVELOPMENT.

The Evolution of Woman: An Inquiry into the Dogma of her Inferiority to Man. By Eliza Burt Gamble. G. P. Putnam's Sons. 1894. Pp. 356.

WHOEVER enjoys an admirable piece of argument, set forth in an admirably lucid and convincing manner, will take pleasure in Mrs. Gamble's book, even though he should remain in the end sceptical of some of the various interesting positions which she defends. Her main thesis, that the change from the coördinate, if not superior, power possessed by females in the animal kingdom, and in the early stages of savagery and barbarism, to the subjection of the sex which was introduced with the change from the matriarchal to the patriarchal form of descent, was a change for the worse, is well made out. It is possible that she exaggerates the feeling for justice and humanity possessed by women in the earlier ages of the world, and the consequent gain in progress that would have resulted if the egotism of the males had been held more in check. With reference to the latter point, however—the early divergence of the female from the common type in an altruistic direction—the facts of primitive sex-differentiation are certainly very significant. In addition to strictly sexual differences, the male acquires organs of sense or of locomotion of which the female is wholly destitute, or else he has them more highly developed, in order that he may find or reach her; or he has special organs of prehension for holding her securely. The female, on the other hand, has organs for the protection or nourishment of her young; and she is frequently provided, in addition, with organs for the good of the community. Thus the females of most bees have a special apparatus for collecting and carrying pollen, and their ovipositor is modified into a sting for the defence of the larvæ and of the community; and many similar cases could be given. While both species of differentiation act for the good of the race in the end, the modifications of the male do so by way of quick gratification of his selfish love of pleasure, those of the female by an unselfish devotion to the welfare of others. The mental accompaniments of these two forms of modification are necessarily extremely different, nor has this primitive difference changed its character with the progress of civilization.

In describing the status of women in the different periods of savagery and barbarism, and in early historic times, Mrs. Gamble makes use, for the most part, of facts which are well known, but she marshals them in a fresh order, and she has been able to throw much light upon many questions of social development which have long been subjects for discussion. Chief among these are the cause of the change from the matriarchal to the patriarchal form of descent, and the origin of wife-capture and of other later forms of marriage. The theories of other writers on these subjects Mrs. Gamble shows to have been largely vitiated by their having found it difficult to recognize the great power which necessarily accrued to the women of a tribe through the custom of recognizing descent only through the mother. And yet it is easy to find very graphic pictures of the state of things which that custom necessarily entails, in the writings of those who have lived among savages in very recent times. Thus, Ashur Wright, for many years missionary to the Senecas, wrote, in 1873:

"It is probable that some one clan predominated, the women taking in husbands, however, from the other clans. Usually the female portion ruled the house, . . . and woe to the luckless husband or lover who was too shiftless to do his share of the providing. No matter how many children or whatever goods he might have in the house, he might at any time be ordered to pick up his blanket and budge, . . . and, unless saved by the intercession of some aunt or grandmother, he must retreat to his own clan, or, as was often done, go and start a new matrimonial alliance in some other. The women were the great power among the clans, as everywhere else. They did not hesitate, when occasion required, 'to knock off the horns,' as it was technically called, from the head of a chief, and send him back to the ranks of the warriors. The original nomination of the chiefs also always rested with them."

But in spite of plenty of evidence of this kind to the truth of a state of things which would have been a reasonably safe deduction without evidence, most writers who have dealt with the subject of the early conditions of mankind have failed to observe the form of society which must have accompanied a system where kinship and all the rights of succession were traced through women. Women were the recognized heads of families or groups; paternity, though known, was disregarded; and men were dependent upon women, not only for their social privileges and tribal honors, but even for their homes. Whenever descent is in the female line, women constitute the head of the house; and in the management of the group, although the direction of affairs is delegated to the chiefs, female influence is supreme.

It was the first taste of the pleasure of having wives who were slaves that caused the spread of the custom of wife-capture, and *pari passu* with that custom proceeded the gradual institution of rights of private property in general. It is true that among some races which are far removed from the institution of the gens, women maintain their independence; but in all such cases (among the Tuaregs, for instance, in northern Africa, as we have lately pointed out in these columns) it is only where women freely inherit property that they are able to resist the masculine love of domination.

Prior to the decline of female influence, women taken prisoners in war were not regarded as the legitimate property of their captors. They were adopted into the gens and invested with the same status of personal independence enjoyed by the original members of the group. Military chieftains were in time allowed to retain their female captives as their special booty, and the gradual spread of this custom marked the decline of woman's power. As within their own tribe women exercised unqualified control over their own persons, the absolute ownership of one woman who was without influence was an object much to be desired, and one for which a warrior would not hesitate to brave the dangers of a hostile camp. In process of time, wars for wives became general, and with that came the downfall of woman's independence.

There are countries in which the three historic forms of marriage have all been in force at the same time. Arabia, at the time of Mohammed, when the numerous clans were in various stages of advancement from the second period of barbarism to civilization, presents a good field for observing the growth of the institution of marriage. In addition to marriage by capture and marriage by sale or contract (in which the woman did not forfeit, as in Rome, the claim to the protection of her kindred, and hence was able to maintain a high social position), there existed also a more ancient form of marriage known as the *sadîca*, which was a remnant of the matriarchal system. In this form of marriage, the man went to live with the wife in her tent, and any children that were born as the result of this union belonged to the mother, and became members of her *hayy*. Here we have proof of a well-established custom of that kind of marriage which naturally goes with female kinship so late as the fourteenth and fifteenth centuries. (Among the Bedouins it is still a rare thing for a woman at marriage to leave her home and kindred.) But the other forms of marriage gradually prevailed, in which the husband bore the name of "lord" or "owner." Wherever this name for husband is found, we may be sure that marriage is of the second type, with male kinship, and the wife bound to the husband and following him to his home. For long ages after *ba'al* marriages had been established in Arabia, so degrading was the office of wife that women of rank were considered too great to

marry. An Arab, in later times, gives this advice to his son: "Do not marry in your own *hayy*, for that leads to ugly family quarrels." It was better to have a wife who had no claims of kin, and no brethren near her to take her part.

In Sumatra, also, there formerly existed three forms of marriage, side by side, that in which the man purchased the woman, that in which the woman purchased the man, and that in which the man and woman united by mutual consent. In Japan, among the higher classes, eldest daughters retain their own name, which their husbands are obliged to assume. An eldest son of one family cannot marry an eldest daughter of another. As regards the younger children, if the husband's family provides the house, the wife takes his name; while if the bride's family furnishes the home, the bridegroom assumes the name of the wife.

We have no space to show how much light this guiding principle, that the matriarchal form of descent involved the supremacy of the female sex, throws upon countless mysterious customs that have prevailed among various savage tribes—some of which, like *la couvade* and the hostile relations of the mother-in-law and the son-in-law, have been of extraordinarily wide distribution, and also exceedingly difficult of explanation. Mrs. Gamble's book cannot fail to produce a marked effect upon opinion concerning many important questions of primitive society. It will also be found extremely interesting by the general reader.

LUMMIS'S SPANISH PIONEERS.

The Spanish Pioneers. By Charles F. Lummis. Chicago: A. C. McClurg & Co. 1893. 8vo, pp. 292.

We have here a series of sketches in which the part played by Spain in the discovery, occupation, and civilization of the New World is painted in somewhat vivid colors. Much of what is said will be new to our readers, for, humiliating as the confession may be, there are, relatively speaking, but few of us who have an adequate conception of the heroism of the conquerors, the self-devotion of the missionaries, and the wisdom of the regulations of the Spanish authorities for the protection of the Indian and his elevation in the scale of humanity. The truth is that the makers of our text-books, and, to some extent, the authors of our histories, have been so busy covering up our delinquencies and otherwise magnifying the share we have had in the mental, moral, and material development of the continent, that they have not had the time, or, perhaps, as our author intimates, they lacked the inclination, to do justice to a rival nation. To supply this deficiency, thereby enabling "a Saxon boy to learn the truth in regard to the Spanish Pioneers," these sketches are said to have been written.

Without going into details, and confining ourselves to the record made by the Spaniards in North America alone, it will be sufficient to notice briefly a few of their acts and achievements by way of giving an idea of the amount and character of the work they performed. Thus, for example, we are told, pp. 20, 24, 77, 83, 161, etc., etc., that, in the century preceding the settlements of the English at Jamestown and Plymouth Rock, they had taken possession of a good portion of the continent, and founded a number of towns and cities, among which St. Augustine and Santa Fé are within the limits of what is now the United States. Naturally enough, the conquest of all this region was attended with more or less bloodshed; but when once the question of supremacy was settled, the men of "sword and cape," as Bandelier styles them, gradually gave way to farmers and mechanics, and the Spanish Government entered upon that course of legislation which, so far as the Indian is concerned, has resulted in elevating him to the highest position he has yet attained in the scale of progress.

To enumerate a tithe of the rules and regulations that were promulgated for his benefit, were an idle task; and we content ourselves with calling attention to the ordinance which, in 1543, endowed him with all the duties and privileges of a vassal of the crown, and to those enactments which secured to him, for all time, the possession of his lands. Measures like these were not intended for effect, as has sometimes been the case with us, but they were meant to be enforced; and woe to the Spanish official who had failed to carry them out when he was called to answer before the dreaded "Residencia." Indeed, it is owing to laws made by Spain some hundreds of years ago that the Pueblo Indians of New Mexico and Arizona (p. 149) have never been disturbed, and are to-day in the full enjoyment of their homes, when almost all the other tribes within our domain, especially those that "never came fully under Spanish dominion, have been, time after time, ousted from lands our Government had solemnly given to them."

Creditable as is this showing, it is but a part of the picture, for, if we shift the canvas, we shall find that in everything that related to the moral and intellectual welfare of the natives the Spanish authorities were equally solicitous. To this end, churches were established wherever they effected a settlement, or, rather, wherever there was room for a mission, and by 1617, three years before the landing of the Pilgrims, there were eleven of them in existence in New Mexico, and, if we may credit Shea ('Catholic Missions,' p. 80), they could already count their converts by the thousand. An Indian school was started in Mexico in 1524, and as "thereafter every church and convent had one attached," it will not surprise us to learn that there were Indians among the Pueblos who could read and write, and had acquired a fair amount of mechanical training before the English colonists had reached our shores. Nor was this all that was done in the cause of education, for, taking the whole of Spanish America—north and south—into consideration, we are told (p. 24) that "three universities were nearly rounding out a century" of life when Harvard college was founded. To supply the demand for works of a suitable character, a printing-press was brought to Mexico in A. D. 1536; and in 1575, some ninety years before Eliot's Indian Bible made its appearance, a number of books in twelve different Indian languages had been published.

But it is unnecessary to pursue this subject further. Facts like these speak volumes for the "Indian system" of our neighbors; and though there have been times when the execution of their laws was far from satisfactory, yet, on the whole, the Spanish method of dealing with this question has been justified by its results. That this is so is shown by the increase of the Indian population in the past 300 years ('Archæological Tour in Mexico,' p. 12); by the school of native writers which Mexico has produced; and if further evidence on the point be required, it will be found in the fact that Juarez, a full-blooded Indian, filled acceptably the highest office in the gift of the people of Mexico in our day and generation.

To appreciate the full significance of this class of facts, we have only to imagine Sitting Bull occupying the Presidential chair in Washington, and Hole-in-the-Day writing history.

In all this portion of his work, and in the greater part of that which relates to the conquest of Peru, our author may be read with pleasure and profit; but when we are asked to approve of Pizarro's share in the execution of Atahualpa, we respectfully decline—not that we think his conduct is in need of special justification, but for the reason that our author, upon his own showing, fails to make out his case. To justify a verdict such as he asks for and upon the grounds upon which he asks for it, he must first show that there was a conspiracy of the Indians to attack the Spaniards, and that Atahualpa was a party to it. It will not do to say that such a thing (pp. 265, 267) was "probable," but he must prove it. Neither will it avail him to assert that Pizarro "believed" in the rumor of an uprising, for then it will be incumbent upon him to explain why De Soto was sent out to see whether there was any foundation for the rumor; and, secondly, having been sent out, why the trial and execution were not postponed until his return. As a matter of fact, De Soto (Stevens's translation of Herrera, vol. iv., p. 277) "found only peaceful Indians," and his evidence would have cleared the Inca chieftain of the charge of conspiracy, but he did not get back until a day or two after the judgment of the court had been carried into effect. That a large majority of the Spaniards were satisfied of Atahualpa's guilt and clamored for his execution, is no doubt true; but to assert that Pizarro could not withstand this clamor, and "had to yield to the demands of his army," is to tax our credulity entirely too far. The man who remained for seven months upon an island, off the South American coast, when deserted by all but thirteen of his followers, was not likely to yield to demands of any sort, or from any quarter, unless it suited him to do so. Bearing this in mind, and judging from the evidence thus far produced, it seems probable that Pizarro had determined upon Atahualpa's death before he despatched De Soto on that bootless errand. It was, under all the circumstances, the wisest thing for him to do, and, admitting that the conquest of all that region was an important step in the progress of the world, the act may be held to have been justifiable.

In this connection it is of interest to note that in June, 1891, 350 years after his assassination, the grave of Pizarro was opened, and his body, or what was said to be his, submitted to a critical examination. It was found to be dried up, or desiccated, as is the case with the so-called Peruvian mummies, and showed what were thought to be the marks of wounds upon the arms and in the throat, the latter of which caused his death. There was also indisputable evidence of the shameful mutilation to which the body had been subjected. Among the different measurements recorded, we find that the body was 1.673 metres in height, which is somewhat "above the medium." The skull was megacephalic, or large, with a capacity of 1.715 cubic centimetres, and had an index of 83.1, which brings it among the brachycephali, or short heads. The eyes were large, the nose rather flat, and the lower jaw decidedly prognathous. The superciliary ridges and glabella were developed to a remarkable degree, and the medio occipital fossa of Lombroso was distinctly marked. From these and other indications not necessary to mention, Mr. W. J. McGee (*American Anthropologist* for January, 1894, p. 3) concludes that this head, viewed in

the light of recent researches in Italy and elsewhere, is "that of the typical criminal of to-day." This may prove to be the case, but until anthropologists are agreed as to the existence of any such typical form, a positive statement is premature. It is proper, however, to add that although the "conquest of Peru was bloody, and some of the leading acts, . . . as seen through the mists of years," are said to have been both treacherous and atrocious, yet Mr. McGee also tells us that "Pizarro may well be judged as the representative of a class necessary and good in its age, but not adjusted to the higher humanities of the present day"—a sentiment with which we should, no doubt, agree if we only knew what "these humanities" required, and could find some way to enforce their demands.

Having finished the examination and convinced themselves that the remains were all that was left of the greatest of Spanish conquerors, the body was again buried, and it now rests in the Cathedral of Lima—the city of the Kings—which was founded by Pizarro and where he was murdered.

Famous Composers and Their Works. Edited by J. K. Paine, Theodore Thomas, and Karl Klauser. Boston: J. B. Millet Co.

THE scope and object of this work can be best explained by comparing it with two other standard publications — Grove's 'Dictionary of Music and Musicians,' and Champlin and Apthorp's 'Cyclopædia of Music and Musicians.' Grove includes, in alphabetic order, articles on every musician of eminence, as well as on musical instruments, forms, schools, etc. Champlin and Apthorp do not give technical and general articles on sonata, symphony, etc., but instead of that they have provided, besides brief biographies, a special dictionary of works; operas, symphonies, songs, etc., being discussed under their own names, in separate articles. In 'Famous Composers' the plan has been followed of devoting separate articles only to the sixty-five composers most eminent in their art, the minor composers and performers being more briefly discussed in special long articles, the Netherland Masters, Music in Italy, France, Germany, Russia, Hungary, and England.

It is obvious from this arrangement that while 'Famous Composers' can, with the aid of its index, be used for reference, it is also intended for consecutive reading. It is far more liberally supplied with illustrations than any other work on music; and there is another special feature which all others lack, namely, an appendix containing as many as 472 pages of instrumental and vocal music, selected by Mr. Thomas from the works of the eminent composers described in the 960 pages of the text, and intended to illustrate the different schools and the evolution of the art. It need hardly be added that Mr. Thomas has made these selections with admirable taste and keen judgment.

The list of contributors includes twenty-one American, three English, three French, and two German writers, most of them well-known names in the musical world. Some surprise may be felt at seeing the name of Mr. John Fiske in the list, but Mr. Fiske's knowledge of music is as extensive as his love of it is ardent, and his article on Schubert is one of the most readable and suggestive in these volumes. The editor was lucky in securing the coöperation of the late Philip Spitta, whose articles on Bach, Handel, and Cherubini are models of miniature biography and criticism. Prof. Paine himself contributes two of the best articles, those on Beethoven and "Music in Germany," in which, at the risk of some repetition, he properly included, not only composers born in Germany, but such foreigners as belong to the German school. His mention of the admirable Beethoven biography by Mr. A. W. Thayer suggests the pertinent query: When will an American or English publisher have the courage to print in its original language this monumental work of an American scholar, which heretofore, strange to say, has existed only in a German translation, although the first volume appeared as long ago as 1866? The circumstance seems the stranger when we reflect that Thayer's work is quite equal to Spitta's 'Bach' and Jahn's 'Mozart,' of which translations have been printed, while Thayer's original copy is ignored, although Beethoven is much more popular to-day than Mozart or Bach.

The article on Beethoven (the biographic part of which is by Mr. Philip Hale) contains no fewer than eight portraits of the master. In the article on Mozart, there is a great abundance of pictures illustrating his childhood. Prof. Paine's opinions of Brahms, Liszt, and Wagner, "the Napoleon of Music" (598, 599) will interest all readers. Although he considers the symphonic poem invented by Liszt inferior to the symphonic form, he admits that it is "a welcome addition to modern music." Of Brahms he says:

"Brahms has no living peer in the art of developing themes: here he shows wonderful ingenuity and infinite skill. In general, however, his themes do not captivate us like the heaven-born melodies of Schubert and Schumann. Strength, purity, nobility, and profundity of thought, rather than sensuous beauty, grace, lightness, naturalness, and spontaneousness, are his leading characteristics as a composer. A certain heaviness of spirit and gloom, nay, asceticism, prevail in his music."

Prof. Paine believes that Germany will continue to lead in the musical world. He has wisely followed the plan of assigning each composer to a writer especially in sympathy with his subject, evidently in the belief that occasional indiscriminate praise is preferable to unjust censure and deliberate suppression of merits. In a few instances, however, this principle has led to rather unfortunate results, as in the article on Meyerbeer, who is now almost universally considered one-third genius and two-thirds charlatan, whereas M. Pougin leads the reader to suppose that he was all genius, and his ideal, art for its own sake instead of the applause of the multitude. M. Pougin is equally unfortunate in some of his remarks on Rossini, of whose thirty-nine operas all but three have been hopelessly shelved, while M. Pougin nevertheless says that his music is "as young and fresh as when it first appeared, eighty years ago." But the height of absurdity is reached in the statement that "it is Rossini to whom we owe the richness and the splendors of the modern dramatic orchestra"! Here the editorial blue pencil would not have been out of place, and the same must be said of the conclusion of the late John S. Dwight's article on Mendelssohn, where he draws up a list of the eight greatest composers of all time—Bach, Handel, Mozart, and Beethoven for the first four; Schubert and Schumann for the next two; and for the last two the choice between Haydn, Gluck, Weber, *Cherubini*, and *Rossini*, leaving two of the four greatest of all composers—Wagner and Chopin—out in the cold! This was Mr. Dwight's parting shot at a stupid world which stubbornly refused to believe with him that music came to an end with Schumann.

Another place where the editorial blue pencil was called for is in the article on Saint-Saëns, in which the writer, without any explanation and in a misleading way, quotes a foolish youthful opinion of Wagner on Bellini, diametrically opposed to the convictions of his manhood. The special article on Wagner is unfortunately one of the least satisfactory in the whole collection. It had been assigned to Dr. Langhans of Berlin, who, however, was already suffering from his fatal illness and did not do himself justice. It was then given to Mr. Henderson, who has succeeded in the seemingly impossible task of making the romantic life of Wagner tiresome reading. The information is all at second and third hand, and, incredible as it may seem in an article of fifty-six columns, only twenty-eight lines are devoted to the Nibelung Festival at Bayreuth, and no mention at all is made of the unique Bayreuth theatre and its epoch-making innovations, which would have interested readers a thousand times more than the long disquisitions on the origin of the drama and other pedantic matter. It is gratifying, however, to see (from pp. 562, 565) that Mr. Henderson has at last discovered that there is nothing obscure in the meaning of leading motives, since they are always explained by the poem, and that harsh emotions call for harsh music.

Of the general articles the driest is that on France by M. Pougin, and the most difficult one that on music in America, by Mr. H. E. Krehbiel. In the article on music in Russia, Poland, Scandinavia, and Hungary, the opinion is advanced that, besides Wagnerism, the most pervasive influence in the music of to-day comes from those border-lands of Europe. In enumerating the famous musicians of Hungary the writer of this article made one serious omission—the name of the famous pianist Stephen Heller.

History of the Philosophy of History: Historical Philosophy in France, and French Belgium and Switzerland. By Robert Flint. Charles Scribner's Sons. 1894.

IN 1874 Prof. Flint published in one volume a history of the philosophy of history in France and Germany, promising later a similar account of the historical philosophy of England and Italy, presumably also to be in one volume. Pressure of work in other directions prevented the fulfilment of that promise, and now the plan has been taken up afresh from the beginning. The present volume is a new edition of that part of the first which related to France, and it is to be followed by two others, completing the original purpose. The general plan of the work and the order of treatment, with some slight exceptions, remain the same in this volume, but the enlargement is very great and affects all parts of the book. The first edition devoted 330 pages to France; the present volume contains 706 slightly larger pages. The original introduction, one of the most interesting and instructive portions of the book, filled 62 pages; it has now grown to 172. Bossuet received 12 pages, and now has 19. Saint-Simon and Fourier had 16, and now have 28, with 30 pages added on other writers of the socialistic school. Comte and his disciples had 26 pages, and now have 87. A number of writers passed over in the first edition are here considered in greater or less fulness, the most important and interesting of these additions being the criticism of the historical philosophy of M. Renouvier.

The introduction is followed by a rapid

sketch of classical, early Christian, and mediæval theories regarding history. Bodin, who died in 1596, is the earliest French thinker to be criticised in detail. It is only in the eighteenth century, however, that there comes to be a great body of historical philosophy, and among the writers of that century the author discusses at length the theories of Montesquieu, Turgot, Voltaire, Rousseau, Condillac, and Condorcet. More than one-half the volume is devoted to the nineteenth century, and its writers are grouped in schools—the socialistic school of Saint-Simon and his followers; the spiritualistic school of Cousin and Jouffroy; the democratic school of Guizot and Quinet; the positivist, and finally the critical school, whose most eminent example Prof. Flint considers to be Renouvier. A brief sketch of historical philosophy in Belgium and Switzerland is added.

There is no attempt in this book to set forth the author's own theory of the philosophy of history, except in so far as it may be indicated in his criticism of the theories of others. The work is rather in the nature of a preliminary study, a careful examination and criticism of all the chief theories which have been advanced in the past, as a basis for the formation of a new theory which shall profit by their excellences and avoid their defects.

One of the most interesting and fundamental questions considered in the introduction is the difference between the terms philosophy and science as applied to history—in other words, the question of the existence of a philosophy of history at all. The author believes such a distinction to exist, but confesses (p. 21) that the only one which seems to him admissible is so little a distinction of nature that it is of no importance which term is used; and throughout the book he makes no real distinction. See, for example, his treatment of Aristotle, Bossuet, and Comte. What he is discussing all the time is properly the science of history, whatever term he may use. The distinction which he seems inclined to make is either that between the science in itself and the science in its relation to other sciences, or that made by John Stuart Mill between the science itself and the science of its methods of investigation. But neither of these is a real distinction of kind. It is at most only the distinction between a higher and a lower kind of science. The material and the processes, the character of the evidence, and the nature of the problems are alike in both. One is just as truly science as the other, and the use of the word philosophy for the higher form of science is merely a disappearing survival.

The only distinction between philosophy and science which is based upon the historical use of the words as distinguished from their use by particular writers indicates a difference of method, and limits philosophy to those fields of knowledge where, at any given time, metaphysical and speculative methods are the only means of investigation. It is a consciousness of this distinction which has led to a gradual dropping of "philosophy" and to the substitution for it of "science" in many departments of knowledge, as it has become evident that strictly inductive methods may be employed in the field in question, and that its phenomena are the expression of ascertainable laws. This is a process of substitution which has gone on very rapidly in the last half-century, and familiar examples of the old terms, now no longer employed, like natural philosophy, mental philosophy, or political philosophy, will readily occur to any one in middle life. Some libraries, in their system of book classification, still make economics a subdivision of philosophy. That men's conceptions of history and their methods of studying it are changing in the same way is beyond question, and no better proof of it could be given than is to be found in this volume. It is not clear, indeed, why the word philosophy should not be now entirely abandoned as a name for the sort of investigation of history which Prof. Flint has in mind.

There remains, however, the question whether there are not problems of a different kind; problems which, in the very nature of the case, no amount of scientific progress can ever subject to the methods of strict inductive investigation, and yet in regard to which such a degree of knowledge, acquired by other means, will be possible as to lead to common agreement about them, although our ignorance regarding preliminary problems may have made such an agreement impossible in the past. If so, there will be seen to be in the end a distinction between philosophy and science which is one of kind and not of degree merely; and if so, the philosophy of history as distinguished from the science of history will be a most important and fruitful subject of inquiry. As much work has been done in the philosophy of this sort by the great seers of the past as in the other by the great analyzers, though it is as yet apparently less productive and less completely systematized into a single body of truth. The real work of Hegel is no more of the same sort as John Stuart Mill's—though necessarily traversing some of the same ground—than the work of Beethoven is of the same kind as a scientific treatise on harmony; and it is, for the present at least, as impossible for an exclusively scientific mind to understand a philosophy of this sort as it would be for a Zulu really to appreciate the Third Symphony. The final philosophy of history, if there is to be one as distinct from the science, will no doubt be produced by a mind of this order; but it must be admitted that, for the present, philosophizing of this sort about history can lead to no profitable results.

It is evident that Prof. Flint's mind is distinctly scientific. It is critical, analytic, logical. He has a comprehensive and firm grasp of a complicated system of ideas—clear intellectual insight—but he lacks that peculiar sympathetic and imaginative insight which characterizes the great constructive thinker. Even as a critic his standpoint is wholly external, the standpoint of the dissecting-table. This character of mind is not only evident in his discussion of the individual systems, but is largely responsible for the adoption of such a method as this in preparation of his own philosophy of history, and also for his own confessed inability to follow the more organic method of tracing the development of historical philosophy as a whole instead of nation by nation. The statement that the more general method would result in "an incessant and intolerable leaping from one country to another" reveals the mind which analyzes. This is, however, on the whole, a most beneficial limitation for work of this sort. There is certainly no case in the present volume where it leads to such conspicuous failure to grasp the real significance of a system as is to be found in some cases in the German portion of the earlier work. It is a peculiar fact that, while the French historians have so often yielded to the temptation to philosophize, no Frenchman has produced a philosophy of history of the higher sort. Comte's system is that which has had the greatest influence upon the world at large, and that is wholly a system of the scientific school. It is, consequently, in this volume that Prof. Flint is at his best; he has made an exceedingly valuable book for all who are interested in its subject. It is to be hoped that there will be no delay in the publication of the later volumes, and especially none in the publication of his own philosophy of history.

A History of the United States Navy from 1775 to 1893. By Edgar Stanton Maclay, A.M. Vol. I. D. Appleton & Co. 1894.

THIS work supplies the need long existing for a consecutive history of the navy from the beginning of the war of the Revolution to the close of the war of the Rebellion. Fenimore Cooper's History not only has been for a long time out of print, but has become both meagre and unsatisfactory. Mr. Maclay has had the advantage, which he has partly used, of the revival in American historical research, and he has had opportunities afforded him of personal investigation in the library of the British Museum and also in the archives of the French Ministry of Marine in Paris. Besides this he has gathered information bearing upon the war of 1812 from private sources in Great Britain. The result is a narrative much more full and interesting than Cooper, as well as more accurate. This is especially the case in the account given of the quasi-French war, as may be supposed, and also the wars with the Barbary States.

The present volume extends from the beginning of our Revolution to the end of the cruise of the *Essex* in Valparaiso harbor in the second war with Great Britain, though a brief mention of naval operations in colonial times is given in the first chapter, which is partly devoted to the discussion of the aptitude of the American people for the sea from the earliest days. This aptitude is claimed as our inheritance from our Spanish, Portuguese, French, Dutch, and English ancestors; but it was, of course, fostered by the circumstances and location of our settled region, which bordered so closely the western waters of the North Atlantic and its navigable estuaries. It is to be hoped that it will reassert itself with an extending commerce and the settlement of our Pacific Coast territory. There is no doubt, however, that our internal development, the decline of our shipping in consequence of the war of the Rebellion and the high-tariff policy, and the introduction of steam have caused a great diminution in the number of native-born Americans following the sea. It is a notable fact that a very large proportion of men now in our navy, in our mercantile marine, and even on board of our fishing and yachting craft, are foreign-born. The New England fishing fleet is to a great extent manned from the maritime provinces of Canada, while the north-countrymen of Europe, who largely man our yachts, still generally hold allegiance to their native countries. The apprentice system is but an insignificant factor in the supply of Americans to the general naval service, and other methods are under discussion for Americanizing both our naval and mercantile marine.

The author does well in calling attention to the great services rendered by the navy during the Revolution. This service, though not brilliant, was none the less effective, and was appreciated by Washington, who depended greatly, in the early days of the war, upon the military and other supplies brought in by the State and Congressional cruisers. Much damage was done to the commerce of Great Britain by these craft and also by privateers.

Service in the latter being more lucrative, the Congressional vessels before long suffered from want of seamen. The scarcity was increased by the policy adopted by the British Government of refusing to exchange the American seamen who became prisoners, and hence the famous Jersey prison ship, with its tenders, became overcrowded with unfortunate seamen. The cruises of Biddle, Wickes, Conyngham, and Paul Jones were among those especially effective in commerce-destroying. No vital result, however, ensued from this kind of warfare; British commerce was not annihilated, the author to the contrary notwithstanding, and the command of the sea along our coasts, insisted upon by Washington as an indispensable necessity, was secured only when the superior fleets of the French gave us the sea power that led to the surrender of Cornwallis at Yorktown. The remarkable sea-fight between the *Bon Homme Richard* and the *Serapis* is well described by the author in graphic but moderate language. It was not only the great sea action of the Revolution, but one of the most brilliant in modern history. Alike creditable in the courage and endurance shown by victor and vanquished, it was extraordinary also in the almost exact equality of the great loss incurred in killed and wounded on board the two ships.

What is known as the French war, covering the years 1798 to 1800, found us with something of a regular naval force, especially with respect to frigates, and as a result, during these hostilities, the frigate actions were well fought and successful. This war afloat forms a remarkable case of hostilities extending over a long period without any previous or formal declaration of war. In this part of the narrative we get fresh information from French sources that adds much to its interest.

More brilliant pages in American naval history soon followed in the war in the Mediterranean against the Barbary States. No more distinguished individual action has taken place in the naval service than those of Somers and Decatur; and as for the small squadron of operations, we can do no better than to quote Nelson's remarks in regard to Capt. Dale's squadron, when he said that "there is in the handling of those transatlantic ships a nucleus of trouble for the navy of Great Britain." It is a pity that the names of Somers, Decatur, and Dale should not have been revived in the nomenclature given to our modern vessels of the navy.

The war with Great Britain was declared with but seventeen vessels in the United States Navy capable of taking the sea. The story of the part that this small force bore in this war is one most gratifying to Americans. The author tells it, as far as it is contained in this volume, in a full, perhaps too full, manner. There is somewhat of a lack of perspective here, but the interest is sustained throughout. The brilliancy of the frigate and single-ship actions upon the sea has always overshadowed the powerful effect of the great naval supremacy of Great Britain as shown in the coast blockade and outside patrol. The only historian who has seemed to appreciate the effect of this blockade has been Mr. Henry Adams. The Treasury of the United States became bankrupt not only from the loss of customs duties, but also from the inability of people to pay taxes, owing to the loss of foreign markets. Jefferson writes at this time: "How can a people who cannot get fifty cents a bushel for their wheat, while they pay twelve dollars for their salt, pay five times the amount of taxes they ever paid before?"

The present volume ends, as we have said, with the cruise of the *Essex* and her capture in the bay of Valparaiso. Porter's mistake as a commerce-destroyer was his return to Valparaiso at a time when he was likely to find a strong force in pursuit. Had he continued his cruise to the East Indies and around the world, his injuries to the commerce of the enemy would have been much greater and his own safety less endangered.

Landscape Gardening in Japan. By Josiah Conder, F.R.S., B A. And a Supplement to the same. Tokio. 1893. New York: Charles Scribner's Sons.

THE preface to this quarto volume of one hundred and sixty pages recites that "the present work is an exposition of the rules and theories of the Art of Landscape Gardening in Japan (as followed from ancient to modern times), so far as they can be gathered from a study of native authorities, added to personal observation of the best remaining examples." The book is divided into twelve chapters, treating of the history and design of Japanese gardens, and such special topics as enclosures, lakes, bridges, lanterns, and the all-important garden-stones. The work is illustrated by twelve inartistic but highly instructive full-page lithographic plates, and by about one hundred woodcuts from drawings by a skilful native draughtsman. A supplementary volume of the same size as the original book contains forty admirable collotype reproductions from beautiful photographs of Japanese scenery and gardens, with appropriate descriptive notes. The two volumes taken together present the most complete and just account of Japanese gardening which has yet appeared.

In different lands and climates mankind naturally develops differing ideas concerning pleasantness and beauty in the surroundings of dwellings. The Italians of the Renaissance, much as they may have enjoyed the beauty of natural scenery, strove after architectural beauty in the near neighborhood of their country palaces, and created those hedged, terraced, and richly adorned gardens which Mr. C. A. Platt has recently pictured so charmingly. The ideals and achievements of the Japanese in this field have apparently been just the opposite of the Italian. The Japanese have long been ardent worshippers of the beauty of wild nature. Many carefully preserved scenes of natural loveliness or grandeur are found throughout the land. Every cultivated person is supposed to be acquainted with them, and with the legends and associations which attach to them. When Japanese gentlemen have desired to make pleasure grounds about their houses, they have accordingly been led to attempt to remind themselves of these famous natural landscapes. With a childlikeness which is strange to us, they have surrounded their dwellings with miniature imitations or models of the scenery of renowned lakes, rivers, mountains, and even sea-shores. One garden suggests the river scenery at Tatsuta, while another pictures the charms of the islands of the Inland Sea. In the one stands the Hall of the Lovely Springtime, in the other the House of the Sound of the Sea. To the initiated a Japanese garden is a poem as well as a picture. Shapes of hills, hollows, lakes, islands, and chosen stones hint of scenes, legends, associations, and national memories innumerable. The "stone of worship" forms a station from which the best view is obtained. "It is a broad, flat stone upon which one stands in a posture of veneration." The lore of the stones is endless. On the slopes of the tiny mountains are seen the base stones, the path stones, and the summit stones, as well as the mist-enveloped stone and the propitious-cloud stone. By the waterside may be found "the beach of the view of the moonrise," and on the shores of the sand islands lie the sea-gull resting stones, the mandarin-duck stones, the wild-wave stones, and hosts of others of varying significance.

It is evident that the imitation of nature is by no means strictly realistic. It is imitation subject to convention and selection. The model of the native scenery is followed with exaggeration of the characteristic. On the other hand these pleasure grounds are seldom disfigured by hybrid or incongruous elements. The common tendency to make the garden a mere display of wealth by overcrowding it with collections of rare plants and costly stones is denounced by Japanese writers. Beds of flowers for cutting, collections of chrysanthemums and peonies, and groves of plums and cherries, of all of which the Japanese are very fond, are faithfully set apart from the poetic or landscape garden, which is always regarded as a retreat for secluded ease and meditation. Many of the pictures of these retreats in Mr. Conder's second volume are very lovely. Quiet and falling water, boulders and tangled shrubbery here compose delightful scenes. With much which to us must seem childish, quaint, or unintelligible, there is mingled so much real beauty that no lover of the arts and of landscape can afford to omit an inspection of these volumes.

The Englishman at Home. By Edward Porritt. T. Y. Crowell & Co. 1894.

AN unnecessarily ambitious title is here given to an excellent little book on English government and administration. Its author has had a wide journalistic experience on both sides of the Atlantic, as London editor of a provincial daily paper and as "special correspondent" in America; he knows just what the American who takes an intelligent interest in English politics ought to be told; and he tells it simply and clearly without unnecessary verbiage. A merit of the book is that it begins with chapters on "Municipal Government," "The Poor Law and its Administration," and "National Elementary Education," before describing the Central Executive and Parliament. We know of no work which gives so interesting and plain an account of vestries, boards of guardians, and school-boards. One of the most striking results of the democratic movement towards social reform that has been going on of late in England is the new life that has flowed into these modest administrative bodies; and Mr. Porritt has been able to treat them as now forming conscious parts of the greater whole which includes Parliament in a way that would have been impossible a few years ago. The book is also useful for the account it gives of the changes of the last few years, since the publication of the "English Citizen Series." Among the most significant of these are the attempts now being made by the Treasury Department at Whitehall, by the London County Council, by the London School Board, and by most of the large municipalities both to regulate sub-contracting so as to diminish the evils of sweating, and to secure the payment of standard wages to those indirectly employed by them.

We have found little to criticise except the very occasional use of a term capable of being misunderstood, as, *e. g.*, on p. 179, where the

author speaks in the same breath of the "office" of First Lord of the Treasury and of the "office" of leader of the House—where "office" is used in two very different senses. We could have wished, also, that Mr. Porritt had explained that, "in unions where out-door relief is not granted" and where we are given to understand that the case of "old people of good character" is "peculiarly hard" (p. 49), the place of public relief is usually taken by private charity systematized by the Charity Organization committee. The whole economic theory of the C. O. S. is indeed open to criticism; but it is only fair to say that many poor-law reformers would never have advocated the abolition of out-door relief had they not expected that the deserving poor would be assisted, in what they deemed a better way, by the C. O. S. And although the C. O. S. is theoretically a private society, there is in many places, such as Whitechapel and Oxford, a degree of coöperation between the local committee and the Board of Guardians which makes organized charity a recognized part of the national system of poor relief.

Pictures in Prose. By Aubyn Trevor-Battye. Longmans, Green & Co. 1894.

In this volume, which deals with "nature, wild sport, and humble life," Mr. Battye has collected some papers which have appeared in *Longmans' Magazine* and the *Saturday Review*. His title is to some extent misleading, for he is easily moved to verse, and not a few of his pictures are presented in metrical form. This is to be regretted, because the reader is led to expect prose, and may properly object to the introduction of very mediocre verse without due notice. Moreover, Mr. Battye exhibits remarkable skill and the most delicate word-painting in his prose, and his aptitude in this direction increases the disappointing effect of his poetry. His keen enjoyment of nature can hardly fail to arouse sympathetic enthusiasm, his knowledge of the habits of animals is minute and varied, and he has the happy faculty of reproducing scenery with photographic vividness. But the loving study of nature is not enough to justify versification in the absence of that rhythmic power which is the essential attribute of the poet; and of the possession of this power Mr. Battye gives no indication.

The first, and perhaps the best, of his pictures shows the busy life of a trapper and lumberman in a Scandinavian forest, and tells with much pathos how a favorite daughter lost her way and was found by her frantic father killed by one of his own dead-fall traps. Then the scene shifts to England, to the strange little island of Canvey, which, though only thirty miles from London, is but little known to Londoners, and is remarkable for the curiously Dutch appearance of its houses and people. Thence we are taken to Manitoba, and enjoy a stirring account of a moose hunt, together with some sensible reflections on the Indian problem from the Canadian point of view. And, finally, we return to England to spend pleasant summer days on the upper river at Oxford, and to watch the strange ways of sand-martins, and water-rats, and many other birds and beasts. About all these things Mr. Battye writes well, for he writes with accurate knowledge and an overflowing heart; and the city-bred reader who cannot reach the fountain-head, may yet slake his thirst for natural beauty in the clear stream of his description.

BOOKS OF THE WEEK.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

A First History of France.

By LOUISE CREIGHTON, author of "A First History of England," "Stories from English History," etc. With numerous Illustrations and 5 Colored Maps. Crown 8vo, $1.25.

"Forms probably the best elementary history of France that has yet been published. Its style is clear and simple without being childish, and its facts are remarkably correct."—*Academy.*

"A very satisfactory work for young readers. Maps are numerous and clear. A number of reproductions of old woodcuts furnish illustrations of historic interest. One could wish there were more of them. The work makes an attractive, readable book."—*School Review.*

LONGMANS, GREEN, & CO.,
15 East 16th Street, New York.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. E. Cornell Esten, Philadelphia, Pa., says: "I have met with the greatest and most satisfactory results in dyspepsia and general derangement of the cerebral and nervous systems, causing debility and exhaustion."

The Nation.

NEW YORK, THURSDAY, JUNE 21, 1894.

The Week.

THE Senate Democrats, with all their shortcomings, with all their backing and filling, have found their last ditch in the free-wool paragraph. Wool is to go on the free list if the tariff bill passes at all. To recede from this position would bring the whole measure into boundless contempt. The effect would be worse if possible than the surrender to the Sugar Trust, because the party has been denouncing the wool duties for fifteen years and vowing to repeal them whenever it should have the power to do so. To compromise now, or to come short of repeal, would be self-stultification so open, so disgraceful, so indefensible, that the party would not have a rag of defence left. It is part of the Democratic creed that duties on wool are a damage to the wool-grower himself, and that is the truth, as the statistics of the industry show. It is free wool, therefore, or no bill. The country will have a chance for about four years to see which policy is the better one for grower and manufacturer, and when the result is before us we shall all be wiser.

It has been left for a Populist in the United States Senate to enunciate true Democratic doctrine on the tariff. The speech delivered by Mr. Kyle of South Dakota last week was in the main a most sensible deliverance, and his position is in very refreshing contrast with that of the protectionists who have been masquerading as tariff-reformers until the matter finally came to an issue. Mr. Kyle represents a sheep-raising State, but he declared that he was not afraid of free wool, and he insisted that South Dakota could produce wool as cheaply as Australia or South America. Senator Hawley of Connecticut tried one of the familiar protectionist dodges by asking if it made no difference to Mr. Kyle whether the woollen goods used by his constituents were made in this country or in Europe. But the South Dakota Senator answered this very neatly by reminding his Connecticut colleague that the manufacturers of New England felt so little interest in the question of nationalities that they had practically driven out the American operatives in their mills and filled their places with imported foreigners, so that a visitor to a New England manufacturing town could walk for a dozen blocks there without hearing the English language spoken. One feels like forgiving a good deal of folly to a Populist when he can talk such good sense as this on a vital issue.

The following gem from Mr. Havemeyer's testimony before the Senate committee which is examining the Sugar Trust, we take from the *Tribune:*

"In fact," said Senator Allen, "the very purpose of the formation of the Trust, as I understand you, was to advance the price of sugar to the American consumer?"

"Yes, sir," was the frank response.

"And the American consumer is to-day paying three-eighths of a cent a pound on refined sugars more than he would be compelled to pay under a system of free (or separate) refineries?"

"Yes, sir."

It was practically conceded in the McKinley bill that as regards sugar the tariff is a tax, and that the consumer pays it. As to all or most other things, such as wool, tin plate, pearl buttons, lumber, steel rails, etc., the opposite rule prevails; that is, the tariff is not a tax, or, if it is, the foreigner pays it. The reason why a different rule prevails as to sugar, it is not easy to show, following the principles of Aristotle's logic, and for this reason it has been only half accepted by the Republican party. But Mr. Havemeyer has really shattered their doll baby. He has knocked out the sawdust so completely that they can never believe in it again. Some of them may even ask themselves whether the same reasoning does not apply to wool as to sugar.

The anti-option bill has come around again. It proceeds on the assumption that a great many sales of wheat, cotton, etc., are made without any corresponding purchases, and that the excess of sales over purchases causes a decline in the market prices of these articles. A similar idea took possession of Congress once during the war. It was conceived that sales of greenbacks for future delivery, or purchases of gold (which were the same thing), caused the decline in the value of greenbacks. So a bill was passed prohibiting all trading in gold and greenbacks unless it were accompanied by the immediate manual delivery of the things, and unless it were done at the private offices of traders—there must be no trading at an exchange or common meeting-place. The result of this sapient law was that the gold quotation, which had hitherto risen only by small degrees, now began to advance by leaps and bounds. Within a few days Congress became so alarmed at the consequences that it repealed this anti-option bill without debate. Then gold went back to its former price, or something near it. There were no more anti-option bills during the war. The fate of the pending bill may be safely predicted.

The statement transmitted to Congress by the director of the mint deserves the careful attention of those silverites who have been claiming that the production of gold could not keep pace with the demand for the metal. Mr. Preston estimates the yield of gold mines in the United States during 1893 at $35,955,000, as compared with $33,014,981 in 1892. This country still holds the first place in the list of gold-producing nations, but the output in the rest of the world last year was the largest in history. The total production in 1893 was about one-sixth larger than the annual average of the period of the greatest productiveness of the California and Australian mines, and the value of the gold available for monetary purposes last year was greater than the total value of both gold and silver available for such purposes in the period just preceding the depreciation of silver. The director of the mint expects an increase of the gold output this year over the record for 1893, and his opinion is sustained by the multiplying reports in the Western press of the opening of new gold mines, and larger production from old ones. The theory that there is not going to be gold enough to "go around" for the world's business seems to be effectually disposed of.

There has been so little for civil-service-reformers to rejoice over of late that an unexpected sign of progress in the Treasury Department will be the more warmly welcomed. Secretary Carlisle has just taken from collectors of customs, who are purely political officials, the authority to nominate persons for appointment as keepers and assistant keepers of lighthouses, and given it to the inspectors of the several lighthouse districts, who are naval officers. This action, according to Capt. Evans, naval secretary of the Lighthouse Board, "absolutely takes the lighthouse service out of politics," as the inspectors will recommend only fit and proper persons for keepers and assistant keepers, regardless of political pressure. The lighthouse service will thus take its place alongside of the life-saving service, which has always been kept out of politics. In other words, it is now accepted as settled that civil-service reform is good for people who have been wrecked or are in danger of that fate. Some day it may be considered reasonable to allow people who stay on land the same assurance of efficient service.

Looking back over the six weeks' soft-coal strike in Pennsylvania, Ohio, Indiana, and Illinois, now practically ended, one truth stands out conspicuously—the disastrous effects of bad leadership. Laboring men are proving the economists to be correct in magnifying the import-

ance of the manager in all large enterprises. A man who can win success for a corporation is worthy of a large share in the common rewards. It is rare to find among the trades-union leaders that executive ability which takes particular note of general trade conditions as well as of local requirements. The conspicuous lack in the labor combinations from a business point of view is good leadership. Workingmen could better afford to pay some real leader—who need not be a laboring man—a large salary than go on strike for six weeks and face starvation, only to find defeat inevitable at the end.

The strike has revived the feeling in favor of further restrictions upon immigration. Nine-tenths of the trouble has come from men of foreign birth, and usually of the lowest European races. There was a noteworthy case in Illinois where fire broke out in a mine after the strike, and a vote was taken among the strikers as to whether they would allow efforts to stop its progress. The American-born miners favored saving the property, while the foreign-born forbade it and carried their point, being in a large majority. There seems to be a considerable sentiment in favor of restrictive legislation among the more intelligent men of alien birth in this country, especially as the diminished immigration which we now receive comes very largely from the most ignorant and debased regions of Europe. But the politicians are very shy of the subject. A proposition to put a restrictive plank in the platform of the Kansas Republican State convention was brought before the committee for discussion, and received some support, but the majority feared that it might offend the "foreign vote," and decided against its insertion.

We hope the public, in view of the revelations going on before the Lexow committee, will not overlook the extent to which guilty knowledge of this state of things must have prevailed. Take Gilroy's case, for example. He professes great horror and astonishment over the corruption of the police which has been laid bare; but does any rational man suppose that, considering he was living in the closest intimacy with "Barney" Martin, who was indicted for bribery just before he appointed him a deputy commissioner of public works, Gilroy knew nothing of what "Jimmy" was up to on the Police Board? The commissioners had for years been selling everything they could lay their hands on; and everybody connected, either nearly or remotely, with politics must have known of it in a general way, but Gilroy undoubtedly knew the details. The poison ran through nearly the whole community. Take the press for example. The police advertising, which is reported to be worth $20,000 a year, has been used always as an instrument of corruption. Elliott Shepard undoubtedly had reason for believing that the commissioners were purchasable when he suggested to his agent to get the advertising from them at a discount of $5,000. In fact, he pronounced them "weak," and said they would "yield easily." We do not wish to make too much of the *Tribune's* present of wine to Commissioner McClave. It is not unnatural that a newspaper should make a present of wine to a good advertiser. But the trouble here was that the advertising was not McClave's to give; and when wine was sent him every Christmas, it was undoubtedly in the belief that it would affect his discharge of a public duty. In truth, the greatest curse of having Tammany in all the public offices has been that it has compelled everybody who wanted anything, however rightful or harmless, from the government of the city to pay for it in cash or its equivalent. The government in fact became a huge market, in which the officers might well have sat at little tables and sold their wares openly. Two years ago there was a widespread belief that this state of things would go on indefinitely. Apologists for Tammany began to appear in every direction, and if Croker had not chosen to make such an open display of his wealth, it would probably have lasted a few years longer.

Now that the Wiman trial is over, it is difficult to see why the accused made any defence. In fact, there was no defence to make. The only plausible explanation of his course is that he forgot the letters of confession he had written to Mr. Dun, or thought they had been destroyed. It would have been far wiser if he had acknowledged technical guilt, pleaded extenuating circumstances, of which there are some, and thrown himself on the mercy of the court and the prosecutors. The result of attempting to meet such a charge and such proof in the way it was met, was to drive Mr. Wiman's counsel into subterfuges and equivocations and fallacies which we feel quite sure they will in calmer moments regret. General Tracy's objection to the production by Mr. Dun of Mr. Wiman's letter of confession as a violation of confidence, which Judge Ingraham so hastily and properly brushed aside, can hardly have been seriously meant. And was it wise for a gentleman of Mr. Tracy's standing to dwell on the "slender thread" by which many eminent citizens have been saved from the State prison, as a reason why an eminent citizen should not be convicted on the clearest proof? Is it not certain that the lesson the young business men of the country will draw from this is that the main thing is not so much to be honest as not to be found out, and that if a man gets "involved," whatever he does to escape is excusable? And what on earth had the Beecher letters to do with the Wiman letters? Beecher never confessed guilt. He wrote letters on which his enemies put an unfavorable construction, but he never said, "I committed the offence; I am very sorry, and I beg your pardon." And what is to be said of the suggestion that the result of the trial might be that Mr. Dun, like Tilton, would become an exile, despised of men and a wanderer in foreign lands? Surely this is advocacy gone mad.

Without attempting to weigh too nicely the utterances of counsel pleading for a man's fortune and honor, it seems to us it is going a little too far to say, when the offence cannot be denied, that it is no great offence, after all. At this point the public has rights which cannot be overlooked. Counsel may say a man did not forge, or that he forged under stress of circumstances and deserves pity, but he ought not to tell us that forgery is not much of a crime if the man is hard pushed, and that many of our prominent men when in "a tight place" have felt it necessary to resort to it. What Mr. Dun is to blame for is for not paying more attention to his affairs after he found out that Mr. Wiman was loose in money matters and needed to be put under restrictions. He allowed him to enforce his own restrictions, and left the business generally in such a condition that Wiman, who was already under suspicion, was able to carry overdrafts of more than $100,000 for over a year without having it known.

The country has incurred a serious loss in the death of William Walter Phelps. The most notable feature of his career was the deep and laborious interest which he, a man of great wealth, always took in public affairs. Inheriting his estate, it would have been nothing unusual had he devoted his money to selfish purposes and his time to his own pleasure. It seemed to come natural, however, to Mr. Phelps to interest himself in all matters which concerned the public welfare. The thousands of dollars which he spent on the roads and parks in his private grounds were really a gift to the public, since all these roads and grounds are as free as those of Central Park. He regarded all the offices which he held as places of trust, and was as assiduous in studying the questions which came up in Congress when he was a member as is any student in preparing himself for a college examination. He always felt, too, that it was the duty of every good citizen to accept an office which he was capable of filling if it was offered to him. This was the secret of his acceptance last year of a judgeship in the Court

of Errors in New Jersey. Gov. Werts, wishing to rid that court of the incubus of laymen which his predecessors had put upon it, asked Mr. Phelps to accept an appointment, because in doing so he would assist the Governor in emphasizing the propriety of selecting judges both without regard to partisanship and with regard to legal ability. It was this consideration, and not any mere desire to add a judgeship to his other titles, that induced Mr. Phelps to accept the appointment. In a national campaign in which his sympathies were thoroughly enlisted, he was a partisan of partisans, but so thoroughly had he won the friendship of the people of his county that he was always certain of a majority of their votes when himself a candidate.

It seems likely that Massachusetts will make a trial of the Norwegian liquor system. A bill allowing the experiment to be made was passed by the House some weeks ago, and the Senate concurred on Friday, while the Governor is understood to favor the policy. As amended, the measure simply gives permission to apply the system in such cities and towns as have voted to license the sale of liquor two successive years, so that only about thirty places in the State come within its scope, and a special vote must be taken on the question before it can be introduced in one of these. The extreme prohibitionists and the liquor-dealers will doubtless continue their present opposition in such local contests; but public sentiment is so strongly in favor of seeing how it will work that it is sure of a trial in more than one municipality. The results will be watched with no less interest outside of the State than by Massachusetts people.

The late Sultan of Morocco made, probably in deference to European ideas, the greatest mistake of his life in not killing his brothers according to the time-honored Oriental practice. The Sultan's crown under the Mussulman law descends to the eldest male of the family, who, on the death of the reigning sovereign, would naturally be one of his brothers, if he had any; his son would thus be shut out. To prevent this *contretemps*, it was in old times, and, in fact, down to comparatively recent times, the custom either to kill the brothers or to put out their eyes. Muley Hassan, the late Sultan, neglected this wholesome custom, and left the crown to his son, with regents to assist him during the first five years of his reign. But the brother Muley Ismail has claimed it, and has taken the field in assertion of his claim, and, as he has been long prominent in Moroccan affairs, he will probably have a strong following and give Muley Abdul Aziz a great deal of trouble unless the European powers interfere. The European residents are, however, very anxious that there should be no interference until they can get away, as it would probably lead to the massacre and plunder of foreigners if the Mohammedans got excited against the infidels.

The world is so well used to disputes between England and France, in which much ink is shed and defiances exchanged, but which end peacefully enough, that it is hard to take such quarrels very seriously. Still, though the present one will probably terminate, like so many others, in a compromise and a treaty, there are several reasons which make it more than commonly dangerous. The prize at stake is larger than usual; and though it is perfectly possible to divide on paper the immense regions between Lake Chad and the Nile, it will be very difficult to reconcile France's ambition to reach the Nile from the west and England's to stretch to Lake Chad from the east. More important, however, is the fact that this cause of contention is but one of several, while some of those settled in the past have left behind them seeds of ill will. The various partition treaties in Africa have not given, and could not give, complete satisfaction to either party; the problem of the Newfoundland fisheries is no nearer solution than ever; the dangerous Egyptian question, which has made bad blood for many years, is mixed up withthe present dispute; and only a few months ago the French treatment of Siam excited much anger on both sides of the Channel, and expressions of dislike not yet forgotten. We may have more Siamese trouble at any moment, and now the death of the Sultan of Morocco opens up new possibilities of a conflict of rival ambitions.

Still another disquieting element is the situation of the two countries to-day. France is in a better position for a quarrel with Great Britain than she has been since 1870. Not only is she in fine military condition, but almost for the first time since the Franco-Prussian war she can feel free to turn her attention elsewhere without the certainty of Continental complications as soon as she has begun. Italy, though involved in the African dispute, is not strong enough to take active part without German assistance, which she is unlikely to have. The Germans do not love England, who has steadily refused to commit herself to the Triple Alliance; they are in a bad temper about the covetousness of New Zealand for Samoa; they are not pleased with the Anglo-Belgian treaty which has caused the present trouble, and above all they are not going to run terrible risks for the sake of others, if the Czar gives them to understand that meddling on their part would mean a general conflagration, as there is plenty of reason for thinking that in case of need he would. As for the British Government, though apt to be peaceably inclined in its dealings with great powers, it is less to be trusted than usual. Altogether, while it would be too hasty to jump to the conclusion that the peace of the world is seriously imperilled, there is good ground for watching anxiously the developments of the latest international falling out.

The cable announcement that the Hungarian upper house may reject the civil-marriage bill once more is not likely to prove correct, as it is now within the power of Dr. Wekerle to break the spirit of the Opposition by the creation of as many new life peers as may be necessary in order to secure a majority for the bill. The timid protest of Count Zichy against the coercion of the House of Magnates will avail as little as the defiant interpellations of Herr Ugron, the leader of the Ultramontanes in the lower house. The magnitude of Dr. Wekerle's triumph is perhaps without a parallel in the annals of any European country, for in every constitutional monarchy the right of the sovereign to object to the retention of a minister obnoxious to him on personal grounds has hitherto always been respected. And yet the Hungarian premier insisted upon the retention of Herr Szilágyi, the minister of justice, after Francis Joseph had declared to the president of the House of Deputies, Baron Banffy, that he would under no circumstances allow Herr Szilágyi to become a member of the new cabinet.

Many influential members of the Hungarian Liberal party, as well as the leading organs of the Liberals of Cisleithania, whose sympathies were altogether with the Hungarian ministry, advised Dr. Wekerle to drop Herr Szilágyi, but he remained inflexible. Szilágyi, more than any other man, had been the creator of the civil-marriage bill, had defended it with matchless eloquence in the parliamentary debates, and had been designated by the premier to carry to their logical conclusion the ecclesiastical reforms upon which he has set his heart. He had somewhat unjustly incurred the suspicion of radicalism, owing to some unguarded expressions, in the heat of debate, during the national demonstrations over Kossuth's obsequies. The King has now endeared himself more than ever to the Hungarians by his loyalty to the constitution, especially since, as a faithful son of the Church, it went hard with him to disregard the express wishes of the Pope on the subject of the civil-marriage bill.

SUGAR IN POLITICS.

THE testimony of Mr. H. O. Havemeyer before the Senate committee touching his relations and those of the Sugar Trust to politics resembles that of the late Jay Gould on a similar occasion. Mr. Gould was asked on what principles he made his contributions to political parties in the State of New York. He replied that in a Republican county he was a Republican, in a Democratic county he was a Democrat, and in a doubtful county he was doubtful, but he was always an Erie Railroad man. Mr. Havemeyer acknowledged that he had contributed to both the Democratic and the Republican State campaign funds. He did not acknowledge any contributions to national-committee funds, nor did he deny such contributions. He said it was customary to make such contributions—it had been customary before the Trust was formed and since. When asked why it was customary, he said:

"We have large interests in this State, police protection and fire protection. We need everything that the city furnishes and gives, and we have to support these things. Every individual and corporation, and firm, Trust or whatever you call it, does these things, and we do them."

This statement was followed by another question and answer, viz.:

"Senator Allen—And you contribute to both parties with the expectation that, whichever party succeeds, your interests are well guarded?

"Mr. Havemeyer—We have a good deal of protection for our contributions. Contributions were also given to the Republican party in Massachusetts. It is my impression that wherever there is a dominant party, wherever the majority is very large, that is the party that gets the contribution, because that is the party which controls the local matters."

It will be gratifying news to the politicians of both parties to know that they can rely on contributions from "every individual and corporation and firm, Trust or whatever you call it," whether belonging to their own party or not. It would have been the greatest possible boon to the late John J. O'Brien if he had been at liberty to call on Democrats as well as Republicans for contributions of this kind, on the ground that police protection and fire protection were furnished by the two parties in their separate character as political organizations, and not in their joint capacity as members of a common government. The question will naturally arise what becomes of those individuals, firms, corporations, Trusts, etc., that restrict their contributions to only one party, and especially of those who contribute to no party—for we believe, in spite of Mr. Havemeyer's superior knowledge, that some of them absolutely refuse to make any contributions whatever. Do these stand in greater danger from burglary and conflagration than others? If they do, the subject is one which calls for the early attention of the Constitutional Convention.

It is evident that Mr. Havemeyer meant that such campaign contributions are made by persons or corporations which depend more or less upon legislation for their profits, not that they are made by everybody who has a warehouse or shop exposed to burglary or fire. At all events, we know, and the public knows, that all business men and concerns, except the smallest fraction, contribute nothing to campaign funds except to the party to which they are attached and whose principles they desire to promote. The idea of contributing to both parties never occurs to them unless they expect to get something besides police and fire protection. If they expect tariff protection also, they may in a few rare instances contribute to both, but generally they will contribute only to the party that believes in tariff protection and makes it a part of its creed. In a case like that of the Sugar Trust, where the amount at stake is very large, we might expect to see an anchor thrown to windward in the form of a contribution to the Democratic party. This is on the principle of speaking the devil fair because you don't know into whose hands you may fall.

Messrs. Havemeyer and Searles refuse to make a full exhibit of their campaign contributions. They restrict themselves to saying that they contribute to both parties, and that they contribute only to State campaigns, not national ones. This does not mean that they refuse to contribute in years when national elections are held, but that they pay their money to the State committees instead of the national committees. In New York, for example, they would pay to Tammany Hall or to Chairman Hackett, but would never furnish a dollar to the national committees of either party. They would confidently rely on the State committees to see that no part of the money aided in the election of Congressmen or President, although the election for State officers took place the same day and on the same ticket. If this is really what is meant by the discrimination they make between national and local politics, they betray a simplicity in worldly things which must have charmed the Tammany committee on organization two years ago, and Quay and Wanamaker at an earlier period.

Another point brought out by Senator Allen is worth the whole cost of the investigation. It is embraced in the following brief colloquy:

"Mr. Havemeyer—The American Sugar Refining Company has no politics of any kind.

"Senator Allen—Only the politics of business?

"Mr. Havemeyer—Only the politics of business."

This means that the company would as soon buy one party as the other, and the context shows that it is in the habit of doing so. The *Tribune*, we observe, does not relish this kind of testimony. It wants Mr. Havemeyer to say that he buys the Democrats (locally) oftener than he does the Republicans, or that he pays more for them. For this reason the *Tribune* regrets that Mr. Havemeyer does not show his books. "We wish," says this candid paper, "that the committee might have insisted upon having the books produced and the facts disclosed in detail. If this had been done, it would have appeared that there was a large balance of Trust money, we are confident, to be charged against the Democratic party, independently of the private subscriptions made by the refiners towards Mr. Cleveland's reëlection." Then it quotes Mr. Chauncey Depew, whose face has always been set against the corrupt use of money in politics, as saying boldly that the Republican party would meet the Democrats more than half way in any legislation which would stop abuses in the raising and distribution of money by campaign committees. We should be pleased to see Mr. Depew and Gov. Flower measuring the distance between themselves, so that neither one should gain any moral advantage by going more than half way.

The remedy proposed by the *Tribune* for all these evils, however, does not go far enough. "If it could be shown," it says, "that both political parties have been equally at fault in receiving financial aid from a powerful Trust which is dependent to a large degree upon tariff legislation, the strongest possible argument would be supplied for a radical reform of methods in conducting national and congressional campaigns. That would be a movement in the right direction, and it would have the *Tribune's* heartiest approval." Would it not be better to cut off the source of the contributions instead of trying vainly to control the disbursements? The payment of money by the Trust, or any other protected interest, to either or both parties, is simply corrupting the people with their own money. We fix a tariff to enable certain persons to pocket $20,000,000 in three years on a capital of $50,000,000 (largely water), and when they pay about 1 per cent. of this sum to politicians for a continuance of the favor, we say that really the laws ought to be changed so as to prevent the wicked politicians from taking the money. Would it not be wiser to take away from the other people all motive for paying it?

WHAT IT HAS ALL COME TO.

WE should like to ask any sincere and well-intentioned tariff man whether he could hope, in the existing condition of human nature, for a more complete experiment in protection than we have had in this country. We have had thirty years of rule by a protectionist party, which made such alterations in the tariff, twenty-five in all, as it thought

proper, and ended in the highest as well as most carefully studied tariff ever invented by civilized man. Could the system be tried under more favorable conditions than these? Is it likely that it ever will be tried under conditions half so favorable in any civilized country? It must be remembered, too, that in order to be really successful in the highest sense of the term, a tariff must produce such plain and unquestionable prosperity as to make the great bulk of the people love it and cling to it. It must not depend on what the newspapers or the lecturers or stump orators say, for its utility. It must commend itself to the public beyond peradventure as the greatest cause of industrial activity and success. People must not only say, "How happy we are," but "How happy our tariff has made us."

Now let us see where our thirty years of tariff have left us. In that time, so far from the whole community being won over to protection, a large and powerful party has risen up against it, and succeeded twice in electing a low-tariff or free-trade President and Congress, both pledged to getting rid of the protective system, and has filled the land with denunciations of this system, both in principle and practice.

But if it has not succeeded in winning over the people to its support, perhaps it has done something to purify political life and bring the most intelligent men of the country to the work of administering the government. On the contrary, it has supplied us with a Senate which does not contain a single really eminent man, which is largely composed of millionaires revelling in fortunes of dubious origin, who have had within a fortnight to submit to the immense humiliation of an individual examination as to whether they have not been speculating in the Stock Exchange on their own legislation. In fact, were we to judge of the tariff by the condition of Congress, we should say it had driven most really distinguished men out of public life.

But perhaps if it has not purified politics, it has improved the condition of the laborer by increasing his wages and attaching him to the industrial system which the tariff fosters. By no means. It has, on the contrary, filled the mines and factories with hundreds of thousands of half-civilized foreigners drawn from the lowest races of Europe, who live in a state of savage and chronic discontent, are not only bitterly hostile to their employers but to the social organization which shelters them, and fill the land, month by month, with strikes, riots, murders, arsons, boycotts, train robberies, obstruction of highways, and defiance of the constituted authorities.

Well, if it has not contented the laboring class, perhaps it has reconciled the farmers, who are, after all, the bone and sinew of the country, to the protective system, by showing them the factory beside the farm, and the operative consuming greedily at high prices their garden-truck and hogs and hominy and wheat. Nothing of the sort, again. The farmers throughout the West and South not only are full of exasperation against the people who lend them money and build railroads for them, but have abandoned the American theory of government wholly, and taken up the modern European or paternal one, which expects the Government to find a market for the producer, in which prices will be high for those who sell and low for those who buy, and to provide them with cheap money of high purchasing power—in other words, money which will be easy to get and yet hard to spend.

In short, we do not recall in human history an experiment more completely tried, and of which the results are plainer, than our protective experiment, except that of absolute monarchy in France, and the one has produced almost as great moral chaos as the other. The country is full of the anti-social, anarchical, and crazy ideas of the power of Government which preceded the French Revolution, and they have grown out of the thirty years of protection as plainly as the French ones grew out of fifty years of licentious despotism. Not the least diverting part of the prevailing folly is the high-tariff attempt to fasten the responsibility of it all on the free-traders, as if it was not the function of a tariff to silence and rout free-traders by the display of its own beneficence. The number of theories which in practice would make the world happy if the wicked would only cease from troubling, is immense. But how to muzzle the wicked is a chief part of the problem of reform.

"THE SCRAMBLE FOR GOLD."

OUR friends the bimetallists have been for now fully fifteen years predicting a "scramble for gold," and, as a result of the scramble, a terrible financial convulsion, which some of them went so far as to say would break up the framework of society and imperil our civilization itself. As the years roll by and this convulsion does not take place, and the world goes on much in the old way, their position naturally becomes more and more embarrassing. It is for this reason, Mr. Mulhall says in the last *Contemporary Review*, that they hold a convention or conference nearly every year to keep people in mind of their existence and let them know that the scramble is still coming. They are very like the Fifth Monarchy men and the Second Adventists in the difficulty they have in waking up a perishing world. It is in vain that they are reminded that the actual use of gold, except to settle international balances, has almost ceased, and that the world's supply is rapidly increasing, and that there is no more sign of competition for it than there was twenty years ago. They still continue to wail and warn, to form associations and clubs, and to denounce the "dishonor" of silver.

Mr. Raffalovitch, the Russian economist, a member of the Brussels Conference and one of the highest financial authorities of the day, has undertaken to cheer them up in the last number of the *Économiste Français*. He says to them in substance that in the middle of May the Bank of France had $352,000,000 of gold, the Bank of England had $165,000,000; that is to say, France had $10,000,000 more than at the same time last year and England $47,000,000 more, while New York had sent over nearly $6,000,000—voluntarily, be it remembered; no clubbing, or fighting, or use of the army or navy. New York just shipped it peaceably, because it did not want it itself.

But how about the supply from the mines? Mr. Soetbeer says that while the average annual production from 1881 to 1889 was 160,000 kilos, the production from 1889 to 1892 was 183,000 kilos. M. Raffalovitch calculates that after the arts have taken their share of this there remain 60,000 to 70,000 kilos for monetary purposes, which he considers amply sufficient. One of the strange delusions of the bimetallists is that the governments of the world have to supply people with metallic money. The fact is that the people supply themselves with metallic money just as they supply themselves with trousers or boots. That is to say, when there is such a demand for gold money that something is to be made by having gold coined, they carry it to the mint and get it coined, and thus the gold currency is increased to the extent demanded. They do not go to the mint and say: "I see the scarcity of gold is increasing, and I fear a terrible crisis is at hand if our Government does not step in and restore silver to its old place of honor; therefore, I have brought you a little gold I happen to have on hand, to have it coined so as to postpone, if possible, the impending catastrophe. It is not much, but [weeping] it is my little all." They simply deposit it and ask to have the value in coin, and find they make a little profit by the transaction, and over this, instead of weeping, they grin.

May be, however, there are signs of the scramble in India, where silver has been so much depreciated. Not at all. On the contrary, hoarded gold has begun to appear in the bazaars as an article of merchandise. India produces from 2,000 to 3,000 kilos annually, and she is now keeping the whole of it. Russia produces about 30,000 kilos annually. She used to export two-thirds of this; she now

keeps it all. Australia is exporting more than usual. She is keeping only 15 to 20 per cent. of her annual production of 40,000 kilos. Nowhere is there any sign of a scramble. The nations of the world which produce gold are simply turning more of it than formerly into coin.

When any nation, or—as this is a deceptive phrase—when the money-dealers of any nation find there is a demand for gold, and that they can make a trifle by importing it, the first thing they do is to look around for the stock which it will cost least to transport. For instance, when Rumania wants gold, she goes to Germany for it; when Germany wants it, she goes to London, and sometimes directly to New York. London is a great gold market, because dealers who find they cannot employ their bullion profitably turn it into the Bank of England in exchange for bank notes, so that the bank is almost always ready to supply purchasers. The great movements of gold through the world are regulated, as the movements of currency are here, by the local demand. For instance, gold may have to go to Egypt during the cotton season, to Brazil during the coffee season, to Argentina during the wheat season, and so on. But the sum which goes to any of them is small. They take their pay mostly in other products, and gold is used only to square the accounts, if there be a balance on either side.

No European nation appears as yet to have discovered bad moral qualities in gold. It goes wherever it is sent without a murmur or sign of resistance, and displays, so far as is known, no partiality for any nation in particular, or for any class of society. It has never displayed the slightest unworthy jealousy of silver, nor objected to being used as a mere settler of balances, instead of a full currency, which it might very well have done. One thing, however, it does resent, and that is being talked of as a rich man's money which is of no use to a poor man. It has more than once asked indignantly when did a poor man get less for a five-dollar gold piece or a sovereign than a rich man? There is, we need hardly say, no such case on record. And it objects more and more to its association with heartlessness and greed, because it has been so much used in literature as a synonym for all money, and for the robber's and the miser's motive.

NATURAL FRUITS.

THE proof that the usual price of admission to the police force in this city has for years been $300 is now overwhelming. It has been a matter of common knowledge for nearly twenty years, but for the first time proof in abundance has been adduced. That this amount went to police headquarters has also been shown very clearly, various witnesses testifying before the Senate committee that an extra charge of from $10 to $50 is made for persons acting as intermediaries between the commissioners and the applicants. On the first day of his testimony McClave said that during the ten years that he had been a commissioner he had appointed about 1,000 policemen. Here is a gross income from that source alone of $300,000, or $30,000 a year. It is well known that the appointments are divided up equally among the commissioners, each having his proportion of the vacancies to be filled. This is so open a practice that the commissioners speak without reserve of the habit which prevails among them of "borrowing an appointment" from one another from time to time. When McClave takes the stand again he should be given an opportunity to explain what portion of this $300,000 he was able to retain for himself—whether he kept it all or with whom he shared it. The other commissioners should be given similar opportunities when they take the stand.

A new phase of police iniquity was revealed on Friday. There are in this city between thirty-five and forty Bohemian saloons, it seems, which do a small business and are not able to pay the regular police tariff of $5 a month for the privilege of selling on Sunday. At the suggestion of a "ward man" they formed an association, and paid tribute of $100 a month in a body. When the membership increased, the ward man raised the sum to $125. This monthly tribute went through the ward man to the police captain, who figured on the minutes of the association's meetings as the "Great Pantata," or Father of Law. In the minds of the Bohemians, who were slowly and painfully acquiring a knowledge of American institutions, the Great Pantata stood for the dispenser of Sunday law in the first city of the New World. What their name for the police justice is was not revealed, but it would be curious and instructive to know what place in American government they assign to him.

It has further been shown, with great plausibility, and with a fulness of detail which was itself convincing, that, in addition to collecting revenues from liquor, vice, and crime, the police have also been collecting a fixed revenue from swindling. A "green-goods" operator of many years' standing, who has been a professional criminal from childhood, gave a minute and apparently frank account of the way in which that extreme form of swindling is carried on, saying that although his picture is in the Rogues' Gallery, and although he is in consequence well known to the police and detectives, he has never been interfered with while pursuing his calling as a "steerer," though he has often passed them with a victim or "guy" in tow, they sometimes nodding to him as he went along. He gave also the names of the principal "green goods" operators and their places of business, saying that he had been warned by the police to keep out of the precinct of the chief of them, McNally, who has been in the business since 1886, and has accumulated between $75,000 and $100,000 from it. He declared that New York is the only city in the country in which there is such a thing as police protection for the green-goods business. Everywhere else the green-goods men work in fear of the police. "Here the 'steerer' or the 'turner' is all right if he has the proper backer." The cost of this "protection" he understood to be 5 per cent. of the profits. All he knew was that 5 per cent. was held back, avowedly for the police, and that he got protection. He was arrested several times for picking pockets, but never molested while openly prosecuting the green-goods business.

This revelation has naturally caused a profound sensation, for of all forms of swindling this of the green-goods trick has long been considered the most infamous. Yet the step from collecting revenue on liquor-selling, gambling, and vice to collecting revenue on swindling is not such a long one. A police official who will accept from the hand of a prostitute a share in the profits of her shame, cannot be expected to be squeamish about receiving a dividend from the hand of a swindler. Why should the blackmailer who has once entered upon the practice stop short of any possible application of it? Why should we be surprised at any development of depravity in a police force which is itself founded in blackmail?

It is maintained by the partisan Republicans of the "straight ticket" variety that all these revelations are due to Tammany depravity, or Democratic depravity, and that a straight Republican municipal administration is the only kind that can give us reform. This is not true. The present condition of the Police Department is the natural fruit of a quarter of a century of bi-partisan administration. Ten years ago, when the Police Board was composed of two Republicans and two Democrats, with one of the Republicans, "Steve" French, president of the board, the Roosevelt investigating committee opened its report on the department with a declaration: "At the outset the committee found a fatal defect in the present system, namely, the fact that the commission is four-headed. There should be but one commissioner, who should either be appointed to hold during good behavior, or else should take and leave office with the mayor appointing him. There is absolutely not a single advantage in having four heads, while the disadvantages are innumerable." The report went on to hint at the blackmailing which is now revealed,

and to put the responsibility upon the four-headed commission. Ten years have passed since then, and every effort to get rid of the four-headed system has been defeated by the Republicans. Last January, when the Legislature came together, Dr. Parkhurst and President Smith of the Chamber of Commerce took the lead in a demand for a single-headed system, but the Republican majority, under the dictation of Boss Platt and the *Tribune*, refused to allow the change to be made, and devoted all their energies to the permanent establishment of the bi-partisan, four-headed system. Because of that Republican policy no change was made.

THE FALISCAN MUSEUM AT ROME.—I.

ROME, April, 1894.

THROUGH all the financial difficulties and deficits with which the Italian Government has had to struggle during the past few years, there has always been a place reserved, an appropriation admitted, for the prosecution of those studies into antiquity the results of which are so important a part of the moral capital of Italy, as well as so large a contribution to the attractions to students of the great winter resort of Europe. During the stringent and almost paralyzing economies of the past two years, means have been found to arrange, and in fact create, two of the most interesting museums in the peninsula, of which one is perhaps the most interesting, from the archæological point of view, that exists in Europe. This, the Faliscan Museum at the old villa of Pope Julius III., was indeed the last important effort of Italian archæology before the regrettable necessity became evident of suppressing all expenditure which had not an imperious economic demand or an inexorable constituency to insist on its retention; and its definite organization was the last work of the scholar and historian who held the post of minister of public instruction in the late Italian ministry, Prof. Villari, the biographer of Machiavelli and Savonarola, who, as a student of history, recognized the value of the discoveries on the site of Faleria, as revealing one chapter of Italian prehistory so unexpected, in the light it has thrown on that history, that it compels us to rewrite it almost entirely.

For a number of years past the department of antiquities of the ministry has been engaged in drawing up an archæological map of the peninsula, by which the results of research could be better collated and the direction of it better determined. It is an immense work, hardly to be completed in a generation, and now suspended, but it has already given indication of work for generations of students. The number of sites to be explored, and the archæological wealth thus far indicated in them, are almost incredible. The fortunate choice of Faleria, as an example of the way in which this exploration ought to be carried on, was decided by the observation of the convergence of several ancient roads on the site, and the acute conclusion on the part of the archæological surveyor, Count Cozzi, and the efficient head of the department of antiquities, Prof. Bernabei, that this great convergence indicated a special importance in the city, or shrine, to which they led. The identification of the site as that of Faleria, destroyed by the Romans B. C. 241, was long ago made, and the city, being one of the so-called Etruscan league, has naturally been considered Etruscan, though the traditions were opposed to such an attribution.

As has often happened before, the testimony of archæology has come to the confirmation of the primitive tradition, and the excavations at Faleria have the value not only of being a model of the manner in which such investigations should be carried on, but of showing that our former notions of the Etruscan state were entirely mistaken, so far as the supposed league was concerned, and that we must admit into the history of Italian civilization an element which has hitherto been regarded as a poetic legend. The itineraries made it easy to identify this site, with its mural remains and evident importance, so near to the later Falerii, as that of which the ancient authors wrote as the seat of the great shrine of Juno, built by a colony of Argives in imitation of the Heræum at Argos, before the Trojan war. But it was only in 1886 that systematic excavations were commenced, in consequence of workmen, in search of building-stone, having unearthed a quantity of blocks of antique cutting in one of the gorges which constituted the natural defence of the city; for in these remains the authorities recognized the ruins of a temple. The work then initiated has resulted in the formation of the Faliscan Museum, in which the finds have been arranged as a model for the collections, which it is hoped in time to form, of other localities of historical and archæological interest, firstly in local groups, and in each group according to the chronological sequence of the tombs; each locality in the system having a suite of rooms devoted to, or destined for, it. This arrangement enables the student at the beginning of his studies to follow that part of the record which belongs to Faleria and its kindred towns, so far as explored, from the earliest period to the Roman conquest. The report, drawn up by Prof. Barnabei, and to be published by the Academy of the Lincei, will contain the legitimate conclusions from the discoveries, of which I anticipate a part.

The excavations began with the clearing away of the ruins I have referred to, and which had been with great probability identified with those of the Argive temple, by Gamurini (*Notizie delle Scavi*, March, 1887). The classical allusions are sufficiently full and clear to put this point beyond serious question, but what is of peculiar interest is the interpretation we must give to the relation between those remains of the common early Italic civilization and the evidences of the presence on this spot of a Greek population, where universal belief in our own day had determined the presence of an Etruscan. The general and dominant character of the Italic finds everywhere is the presence of the hut-urn and well-tombs; and the occurrence of these over the entire extent of the central and southern part of the peninsula, being wholly distinct from the form of burial shown in the Sicanian graves of western Sicily, and the still more widely different Siculian tombs found in the known range of the Siculi in eastern Sicily and southern Italy, is a proof presumptive of the chronological precedence of the race to which they belonged over the Siculi, of whose existence, range, and character we have historical evidence coming down to the Greek colonization of Sicily, and of their having been expelled by a composite stock from the continent. But the hut-urn, symbol of this phase of the Italian development (which, following the Italian archæologists, I have designated as Italic) is not, at Faleria, found in its primitive form, but rather in a derived, conventional form, the well-tomb being retained, with a survival of the hut in the roof stone.

This induced Cozza to conclude that the site was not the original one of the Italic population, and to search in the neighborhood for another of earlier date. He found at a point above Faleria the ruins of a city, unknown to tradition, which he concluded to have been abandoned about two centuries before the destruction of Faleria. This was Narce, a strong hill-site higher up the valley, but still far from the head of it, and, like Faleria, showing conventionalized and late Italic remains from the first, so that the evidence was still to seek of a purely Italic and primitive civilization. This was found finally in the traces of what must have been an important seat of the Italic power, which was abandoned during the continuance of the primitive phase. It is at Monte S. Angelo, at the head of the valley, where the necropolis is of the pure Villanova type, undisturbed by the foreign invasions of Faleria and Narce. It may be imagined that the town on Monte S. Angelo had been subjugated by an invading race, which afterwards moved down to and occupied Narce and Faleria at nearly contemporary dates, and in the latter place completed its development of the problem of civilization, as far, at least, as it had been carried at the date of the Roman conquest. The find at Narce is richer in the intermediate objective, but has no other distinctive testimony to bear of what that was, so that it may be classed entirely with Faleria.

What this Italic race, or amalgamation of races, may have been, it is not necessary to conjecture here, and the period at which it flourished can only be conjectured here or elsewhere—there is no datum on which chronology can seize. What is of moment to us is the certain evidence that there was a colonization of some Greek stock which dominated the Faliscan country at so early a date that the Etruscans never obtained a footing there. And if we consider that the Trojan was a Greek race, there may thus be given a solid basis for the tradition which Virgil preserves of the colonization of the Tiber valley by the refugees from Troy. Without attempting, like Martelli, to interpret the legends with historical precision, we are now able to show that, except for possible partial and late local invasions, such as that of Porsena, there has never been any establishment of Etruscan authority or peculiar civilization south of the Ciminian range, and that in all probability Veii and Tarquinia were, if ever Etruscan, only so during the later period of the independence of Etruria before the Roman conquest.

W. J. STILLMAN.

A FRENCH PROVINCIAL CITY.

MONTPELLIER, May 8, 1894.

WHY should foreigners ever come to Montpellier? All our neighbors have more to offer them: at Agde they find Greek types, in the descendants of the ancient colonists; at Arles and Nîmes are the great Roman remains; Aigues-Mortes has a prison tower, Avignon has walls, Lunel shows bull fights. We are surprised when any stranger passes by these famous places and descends at our quiet station; and perhaps we do not too much encourage him. He must make up his mind to leave the main lines of travel, to get his Paris newspapers twenty-four hours late, and never to see a *Times*. Our banks make short work of his suspicious attempts to draw money upon that mysterious document which he calls a "letter of credit"; our hotels hold out no delusive

promises of "English comfort." Indeed, English is a language so remote that in this city of 80,000 people he will not find three persons who can converse in it. The Bulgarians and our friends the Russians send their children freely to our schools and universities, but it is forty years since the English deserted us for Cannes and Nice.

Perhaps, however, the infrequent visitors like a city which is as French as Orléans and much further removed from the influence of the capital; perhaps they are interested in Languedoc, which preserved its Estates down to 1789, or in the neighboring Cévennes, stronghold of French Protestantism; perhaps they admire the habile and generous people of the Midi; perhaps they find here an agreeable climate, a pleasant countryside, a refined and hospitable university circle, and an abiding-place in a warm-hearted French family, among lively French-chattering young people. Possibly even people who have been in Monte Carlo and might be in Paris, prefer Montpellier. Or is it simply the reputation of our Peyrou which attracts them? The Peyrou, our municipal promenade and park, is, at any rate, our chief pride, and every right-minded Montpellieraine considers it superior to the similar "Fontaine" at Nîmes, and in his own thoughts compares it with Versailles; though, of course, Versailles has no view of the Mediterranean and Cévennes. The Peyrou occupies a plateau of half-a-dozen acres in the highest part of the city, and no one is allowed to put up buildings high enough to cut off the view. From it the eye ranges across the green flats of the vineyards, which are our wealth, towards the sea, and on the other side one follows the splendid arcade of the aqueduct inland over pleasant hills to the more distant rounded masses of white and naked rock, which are characteristic of the Cévennes, and which roll up to the huge dolomitic Pic St. Loup.

Around the Peyrou sweeps the city, which boasts of little except its situation and its prosperity. We are but a modern place, founded only eleven centuries ago, and we have destroyed most of the monuments of our own history. Of our walls but a single gate and tower are left. Still, we are proud of our cathedral, with its famous vaulted portico, and of our Jardin des Plantes, founded by Henry IV. Our Rue Nationale, leading from the Peyrou through the triumphal arch of Louis XIV., might almost be mistaken for the unfashionable end of the Boulevard St. Germain, and our boulevards much resemble the exterior circle in Paris. On the Place de la Comédie, the centre of civic life, stands our new municipal theatre; it is of course inferior to the temples of the dramatic art which the opulent municipalities of New York and Chicago have doubtless erected for the instruction and delight of their citizens; but strangers consider it a superb building, a monument of the French sense of architectural form and power of decoration. Within the circle of handsome new streets is a labyrinth of narrow and ill-smelling lanes, where are still a few vestiges of the mediæval town. But we Montpellieraines avoid the old quarter, and look with some disfavor on the projected tramway system which threatens our favorite boulevards.

It would ill become us to describe our own peculiarities as a people, the more so because we have no very marked outward characteristics. The only picturesque elements of street life are an occasional lady in Arlesian coif, a peasant woman in lace cap, a carter in the southern blue cap resembling a Scotch bonnet, cracking his whip over the three horses, in enormous pointed collars, which so honestly draw the heavily laden wine-cart. Even the blouse is not very common, and our students have nearly left off wearing the distinctive velvet "berrette." We have no desire to appear different from other civilized people; we have Paris fashions for our women and London styles for our young men.

As to our character, you must be warned against taking that humorous Monsieur Daudet's books as describing us. Possibly to the calm observer we seem to use a prodigious quantity of gesture and to talk with express-train rapidity. Of course French is our tongue, and the foreign ear detects no significant difference in the accent of Montpellieraines and Parisians; but we do not forget that Languedoc is also a language. The various time-honored dialects (some people call them patois) are still alive in the villages. We have "joyaux" and a "consistoire félibréen," and flatter ourselves that we are restoring the Provençal and its kindred forms to literary use. But when, last Sunday night, we held a "félibrige Montpellieraine," and recited "poésies" and rendered a play translated from Molière into the speech of "Mont Pelié," nobody came to hear, and many among us think it all child's play. We are not Languedocians, we are essentially Frenchmen, fair types of Frenchmen throughout the Republic.

Nevertheless we are in no sense Parisians: we are simple rural Frenchmen, having neither commerce nor manufactures. The town rests upon the shopkeepers, very numerous, who live upon their sales to the peasants, and the peasants are nearly all vine-growers—hence the phylloxera did us immense harm. Now that, after an expenditure equal to the value of the land, the American stocks are producing again, the price of wine has fallen to such a point that some proprietors cannot get two sous a litre for their year's product. At least our own libations are not expensive, and the proverbial thrift of our race keeps up our prosperity, even in these hard times.

We may fairly claim also to be an intelligent and well-educated people. Our Department of the Hérault has had only one illiterate born in the department out of the whole levy of conscripts for a year. Besides the private schools, chiefly Catholic or Protestant, we have a system of public instruction which takes the infant in his cradle into the public day nursery, and carries him through the public kindergarten up to the Écoles Primaires Supérieures (not on any account to be confused with the Écoles Primaires Élémentaires Supérieures), and at nineteen sends him forth a well-trained youth. Or he may early diverge into the fee-receiving lycées, and thus advance to the public university. Perhaps a stranger might think that the methods are too effective, that the work is all cut out for the pupils, and that they are not trained to think for themselves; perhaps also the formal lessons in ethics defeat their own object by substituting a set of phrases—"justice," "self-respect," and the like—for a healthy following of good examples. As for the lycées, nothing is easier than to make a study of them which might be useful for an American. All that is necessary is to apply to the Rector of the University, titular head of the system, who will good-naturedly decline to afford the necessary facilities; then to appeal to the Minister of Public Instruction in Paris, who in due time will refer to your Ambassador; if he vouches for you, the Minister will request the Rector to instruct the Directors of the lycées to direct the teachers to assist you. If the correspondence takes less than a month, you may reach your unreasonable end of visiting the classes in function. The University speaks for itself, and makes no difficulty about letting its excellent light shine.

Montpellier is one of the few French cities in which there is a noticeable Protestant element. Once entirely Protestant, the faith almost disappeared under Louis XIV.; but the hardy mountaineers of the Cevennes preserved it, and their descendants form a numerous and vigorous body in the city. Having entire freedom of worship, the Protestants as a body do not enter warmly into the bickerings between the Catholics and the Radicals. It must be difficult for a foreigner to understand the sensitiveness which looks upon a quiet religious procession in the street as "of a nature to awaken the susceptibilities of that public which takes no part in it"; or which sees in a mass at a fête of Jeanne d'Arc "a manifestation likely to produce an element of division." Apropos of this fête, our Free Thinkers' Club proposes to hold a "punch of protestation," and to represent in tableaux the burning of Jeanne d'Arc, with the attendant clergy in canonicals. Without going to such excesses, we moderate republicans have a deep distrust, not of our Catholic neighbors, but of the political influence of the clergy. Our common phrase, "Réactionnaire," is used to sum up this feeling, much as the word "Copperhead" was used during your civil war.

At this moment, owing to the censure inflicted by the Government on the Archbishop of Lyons for advising non-compliance with a law of the republic, the religious differences nearly coincide with political divergences. Aside from the recriminations of the press, our political struggles take place chiefly in the Municipal Council. Our Conseil-Général for the Department of Hérault can go little further than to request the prefect to urge the Government to put a pressure on the engineers to hasten the preparation of the plans for establishing the shore line of our lagoons; and the administration of the department is, of course, subject to the directions which emanate from Paris. Our Municipal Council, however, has important functions of finance and police, and meets when it likes, unless the prefect forbids. These sessions are the opportunity to see and hear our men of the South at their happiest; the air resounds with Provençal cries of "Mais autrement!" and "Jamaï de la vido." We do not trouble ourselves with those severe and complex rules of parliamentary law which appear to enchain Anglo-Saxon legislative bodies; when a member has anything to say, he says it, without much regard to what somebody else is saying at the same time. Our mayor, elected by the Council, and at the same time dean of the faculty of letters in the University, knows how to bring the debate to a point. Nobody better understands how to restore good humor by letting fall a witticism not too refined on a delicate question of morals. Nobody could more adroitly fence with, without enraging, our socialist members—to restrain them is beyond human power. If the physicist seeks an illustration of the expansive force of a confined gas, let him observe our socialist members. Seated in a compact body, they scent every manœuvre of the "vieux réactionnaires," and secure little appropriations for all sorts of workmen's enterprises. To them an appropriation of 500 francs for a fête of Jeanne d'Arc is open support of clericalism: is it not better to celebrate some of the glorious events

of the Revolution? On the other hand, they have secured in the concession for tramways the insertion of a clause by which the wages of the employees are to be fixed by a trades-union. They are an example of the wave which is unceasingly beating against the cliff of social order. Will they undermine it at last?

Doubtless part of this political effervescence is due to our love of noise and excitement, a habit equally visible in our amusements. Besides our brilliant balls, we have intellectual treats, concerts in the beautiful hall in the theatre building, public courses of lectures on Greek art and sociology, and musical ethics at the University. We keep up permanent opera, very good, and a permanent theatre which does not err on the side of seriousness. Nobody could go any further in indelicate suggestiveness than our *jeune premier* in his great flannel-undershirt scene in "Par un Fil à la Patte." All these diversions are chiefly for the *haut monde;* our semi-annual fair gives a month's delight to everybody. One street of the booths in the Esplanade is given up to the sale of goods, mostly knick-knacks and small wares; but if you like things peculiar to our country-side, you may find our laces or may discover the remarkable Terres d'Uzès, the work of a local Palissy. The other row is given up to noisy pleasures. In many of these performances there is a fourteenth-century strain of broad indecency, which we appear to enjoy with the rest; for we French, even little children, have strong stomachs. Exception might also be taken to the abundant roulette tables, where you may win poor cigars and are nearly certain to lose sous. On the whole, however, we have reason to think our fair a good-humored, honest kind of amusement.

We do not let such popular pleasures take the place of more refined festivities, such as the recent fête of Jeanne d'Arc. Even the radicals enjoyed the good time. Perhaps the competition of the brass bands and the bicycle-racing was a little dull, but not so the Battle of Flowers on Monday. Our marketwomen and washerwomen prepared magnificent floats —Jeanne d'Arc as a shepherdess, Jeanne d'Arc as a warrior, Jeanne d'Arc as a saint; but we liked better the big ox of the Agricultural School, and the landaus full of students and laughing people. Flowers were less common than the inexpensive bits of colored paper which we showered from the balconies, under the mistaken name of "confetti," and the "serpentins," the colored paper ribbons shot across and among horses, carriages, and people, or streaming out in the wind. This cheap and innocent sport might seem tame in a country where the young men of the first universities celebrate their fêtes by scrambling up each other's backs and tearing off each other's jerseys, but it gave a long afternoon of uproarious delight to many thousands, and harmed not one. To a foreigner one of the pleasantest remembrances of Montpellier would be the good temper and delight of the thousands who thronged the streets on that afternoon. Whatever the reason for coming, there can be no doubt that the visitor is very loath to depart.

ALBERT BUSHNELL HART.

IN THE MOUNTAINS OF KABYLIA.

FORT NATIONAL, May 10, 1894.

LOOKING eastward from Algiers across the bay and the plain of the Metidja, one sees, on a clear day, a succession of snowy peaks rising above the blue line of mountains which on this side bounds the whole horizon. As seen from Algiers these snow-clad mountains, which are the highest summits of the range of the Djurdjuras, form a sort of finishing-touch to the tropical landscape. In reality, they are not covered with perpetual snow. The winter visitor, sitting under the palms of the Place Bresson or in the rose gardens of Mustapha, sees them at their best, when they are white from base to summit; later on, the snow gradually recedes into the narrow ravines about their tops, and by midsummer it has wholly disappeared. The loftiest of them, Lella Kadidja, "Lady Kadidja," the Jungfrau of the Djurdjuras, is but 7,542 feet, which is far below the snow-line in this part of the world. The highest parts of the range are uninhabited, but the mountainous region round about them, the Kabylia of Djurdjura, supports a considerable population, the so-called Kabyles, who live in villages on the lower mountain-tops throughout the littoral and down as far as the borders of the level land. The entire region is most interesting for its natural scenery and its picturesque folk life, which has kept original conditions singularly unchanged. In the heart of Kabylia, outside of the few French villages that serve as military stations, there is almost no visible trace whatsoever of European contact in the people themselves, their dress, or their habits of living. The majority of the people here speak but little French, and although the Kabyles since the bloody insurrection of 1871 have been placed under the civil authorities and the common law, and schools have been established, here and there, for male children, it has left, as yet, few marks upon the surface of their life, which apparently goes on as it did for centuries before.

Most parts of Algeria are easily accessible by rail or diligence. Of railways there are at present in operation something over 1,800 miles, all of which has been built since 1870, when the first line, from Philippeville to Constantine, was opened for traffic. They stretch now in a network through the whole northern part of the colony, from the borders of Morocco to Tunis, and two lines run far down into the desert, one to Biskra, the centre of the date trade, in the oasis of the same name with its hundred thousand date palms, and the other to Aïn-Sefra, on the western side, in the direction, at least, of Timbuctoo and the Niger. Where the railways end, that *lucus a non lucendo* vehicle, the diligence, in this part of French territory even less diligent than its forbears elsewhere, starts in, so that with unlimited time it is possible to get anywhere.

The goal of a journey to the Djurdjuras is usually the village of Fort National, and to reach it it is most feasible to call into requisition both rail and diligence, although the whole distance may be made by the latter. The route from Algiers leads, first, out across the fertile plain of the Metidja, green with vineyards that stretch away in straight rows as far as the eye can see. Gradually the country becomes hillier, and the vines are interspersed with fields of grain and tobacco. Several streams are traversed on substantial stone viaducts with many arches, the train crawls cautiously through three or four short tunnels, and the grade becomes continually more abrupt. Finally, five hours from Algiers, you are set down at the terminus of the line, the French village of Tizi-Ouzou, and ascertain that you have successfully accomplished some sixty-five miles of your pilgrimage.

The remainder of the journey, by diligence, a matter of seventeen miles, but of four hours, is by far the most interesting part of the way. The whole aspect of the country has gradually changed, not only in its conformation, but in its vegetation, buildings, and methods of agriculture. Near Algiers the farm buildings scattered about the country are either the new erections of French settlers, or they are not infrequently, in whole or in part, the old Arab farms, which in some few cases still belong to native owners. The Arabs, however, in northern Algeria, in town or country, are a vanishing race and not many are left as tillers of the soil. In this region agriculture is conducted on at least recent methods, though without farm machinery. The fields are ploughed with modern ploughs, and many vineyards are cultivated by horse-power. As one gets further into Kabylia the isolated farmsteads grow fewer, and ultimately disappear altogether, all the houses being congregated in villages which in every direction straggle irregularly along on the very summits of the mountains. Instead of the flat white roofs of the Arab houses, these are invariably pointed and covered with tiles, which make every mountain top a gleam of red in the midst of the abundant verdure that always covers them. In these higher regions the vegetation has wholly changed its appearance and has no longer the tropical character of the country about Algiers. The palms have long since been left behind, and if it were not for the hedges of prickly pear along the wayside and the boundaries of fields, the olives of immemorial age, and the luxuriant growth of the fig trees which dot the country in well-kept orchards, one could readily believe one's self, in this respect at least, in a northern climate. The oldest of the olives are said to have been grafted by the Romans. At any rate, the Kabyles had entirely forgotten the art, which was reintroduced by the French after the conquest of this part of the colony in 1857. Methods of agriculture, too, have changed. All over the slopes of the hills bare-legged men in white gown and turban are ploughing, their wooden ploughs with a single handle drawn by a pair of bullocks yoked far apart and driven by a long ox-goad that reaches to the animals' heads; other than this, in fields and vineyards, a short-handled mattock seems to be the only tool used.

In this region, as in almost all parts of Algeria in the agricultural districts remote from the towns, there are scarcely any French at all. It strikes one as being sparsely peopled with either French or Kabyles, and with its fertile soil and usually abundant rainfall could support a population many times larger than it has. The French Government has made only a few sporadic attempts to settle an agricultural population, and the great bulk of the immigrants, particularly from France, flock to the towns, where they are not needed, and avoid the country. If it were not for the Kabyles, who are native not only to Kabylia proper, in the Djurdjuras, but to various other parts of the three departments, agricultural conditions would be a subject for despair. All over the colony they form the real peasant population, industrious and hard-working, the very opposite of the indolent Arabs. Even in the towns they do a major part of the manual labor, and for all Algeria they are literally the hewers of wood and the drawers of water.

Fort National, through whose stone gateway, after winding in and out along the curves of the superbly constructed *chausée*, the diligence finally swings with a brave show of speed, is in reality a fortified town. Like the Kabyle villages, it is perched on the summit of a mountain, higher, however, than its immediate neighbors, which it commands on every side. Its altitude of 3,153 feet above the sea

makes it the highest French settlement in the colony, although several native villages are higher. Nothing could be finer than the view from the walls. South, across the landscape of mountain and valley, which in one place dives sharply downward a good two thousand feet of steep descent, stand close at hand the snow peaks we had seen from Algiers; in the opposite direction, far below at the base of wooded mountains, is the broad valley of the Sebaou, with the river winding along its sandy bed, half dry at this time of the year; everywhere, north, south, east, and west, are mountain spurs, wooded in part, in part cultivated in sharply rectangular fields, but all green to the top, where inevitably appears the red-tiled village.

Fort National itself is a little French town of stucco houses, with not over three hundred inhabitants, more than usually clean, and throughout pervaded by zouaves. Its principal street, where are the inn, shops, and cafés, runs deviously through it from gate to gate. Above and below are other streets of barracks and houses, and the fort and citadel are at the top. The inn accommodations are extremely limited, and with some dismay we learned upon our arrival that not a room was to be had either in the little hotel or out of it. The possibilities had all apparently been disposed of, when a Kabyle edged through the interested crowd that had collected, and said in excellent English that he knew where there was a room if we would follow him, and we were soon more or less comfortably installed over a soldiers' café at the end of the street. Conversation with our deliverer showed him to be a much travelled man, and when he learned that we were Americans, he told us that he had spent all last summer in the Midway Plaisance, and he had a fund of reminiscences in high colors of New York, Brooklyn, and Philadelphia. Of a truth, the world at the end of the century is much smaller than it ever was before, and, improbable as it may at first sight seem, there are even direct ties that now bind our shores with the tops of African mountains.

The Kabyle villages of the Djurdjuras are possibly most picturesque at a distance as they lie in the sunshine on their green mountains. They are all alike except for size, only that the larger ones are apt to be cleaner and better built, and have beside the houses a whitewashed mosque with a minaret, octagonal or square, and the *djemäa*, or council-house, of the community. The houses are invariably constructed on the same model. All are low rectangular buildings made of rough stones laid in courses with all possible economy of mortar, with a gable roof covered with earthen tiles. Only the better ones are plastered and whitewashed on the outside. They have no chimneys, the smoke being allowed to escape through an aperture under each gable. A door in the middle of the longer side admits one into the dark interior, for there are no windows. In the larger houses sometimes two or three of these buildings form the sides of an unpaved court, but more often one constitutes the whole. They are all huddled together at haphazard, except for the irregular street that runs through the centre of the village, into which it straggles at one end, often up a steep ascent, and out down another. The outbuildings, along the edges, are often made of branches wattled together and thatched with grass and reeds. Inside, the houses have only a dirt floor, and are devoid of any article of furniture whatsoever. The poorer villages and houses are squalid in the extreme and swarm with vermin. With other remembrances you are sure to carry away substantial ones in the shape of fleas, whose multitude in these places it is beyond the power of man to number. The people who live in these unpromising surroundings are a tall, well-made race, not infrequently with blue eyes and red hair. Many of the men are as fair as Europeans, for whom in another environment they could easily pass. The men wear, but without the Arab's lordly swagger, the usual Arab costume, a gown or *gandoura* of white, or what once was white, one or two burnouses and a turban, the cleanliness and costliness of all of which runs through the scale here as elsewhere. One of the most disturbing influences of French civilization in all Algeria to the sensitive eye is the use, by the poorest classes, of discarded gunny-bags for a burnous, and this custom has even penetrated into the distant villages of Kabylia, where, as in the streets of Algiers, natives sometimes go about with "*fragile*" and all sorts of ridiculous legends imprinted on their backs.

The women, who are pretty as girls, with full faces and high color, but who age early, all wear two *foutas*, which are simply straight pieces of cotton material gayly striped in blue, red, and yellow, reaching below the knees, and fastened at the shoulders in front by brooches of silver or white metal, and held around the waist by a girdle. A bright colored cotton kerchief covers their abundant black hair, which is curiously plaited in a bunch on each side of the face. They are all tatooed in blue on forehead, cheeks, and chin, and sometimes an elaborate device runs about the neck and down over the breast. A flat silver brooch set with coral or red and blue enamel is worn by the unmarried women on the forehead, by the married on the bosom. They all go barefooted and bare-armed, and, unlike the Arab women, never veil themselves with the *adjar*. This last is else religiously worn by Mohammedan women throughout Algeria as much as it was in the days of the Prophet, who introduced it, although contact with Europeans has apparently made them, under circumstances, careless of showing their faces. Many a time, in our walks about Algiers, we have come upon Arab women in out-of-the-way places who made no effort to veil themselves, although they covered immediately when a native came in sight, even if he were no more than a shepherd. The Kabyle women, like their Arab sisters, stain their finger-nails with henna, or even redden the whole hand, and they sometimes color their feet and ankles a bright yellow. Like the Arab women, too, they load themselves down with the bracelets and bangles that even the poorest seem to possess in profusion. Their life, however, is not one of as much variety as their garb might imply. They not only make the butter and cheese, which is woman's prerogative elsewhere, but they spin with a distaff, weave the garments they wear, sometimes in most complicated patterns and colors, on primitive looms, and make the pottery they use, in shape and decoration often astonishingly like Mexican pottery, which they turn out free-hand, without a wheel. They also have the exclusive privilege of carrying the great earthen water jars, often for long distances up and down the steep slopes of the village, holding them, as they do their babies, on their backs. With children, which are in costume small copies of their elders, except that the smallest not seldom go quite naked, the villages are alive. As soon as the approach of a stranger is observed, a cry goes up from one end of the place to the other, and children hasten from all sides, out of doorways and alleys, and surround the intruder in a mob, all clamoring for sous; and long after you have left their precincts you can hear their excited shouts.

Once a week at Fort National, as at other convenient centres throughout the country, an open-air market is held that calls out the whole male population of the district—a picturesque crowd who swarm in on foot, horse, or donkey, driving before them sheep, goats, and cattle. Some of them have a number of donkeys heavily laden, others but a bag or two of barley, a greasy goat-skin filled with olive oil, or a basket. The market, which is held on the hillside just outside the gate of the town, is a most interesting sight. Each man huddles his possessions together, whatever they may be; the sheep and the goats are tied head and head in little groups, the grain bags are opened to display their contents, wool is exhibited in heaps, a few pieces of cloth are shown in one place, and some pottery in another. Tents in the meantime have been set up, and impromptu cafés are ready to furnish black coffee in the usual tiny cups. There are no shops in the Kabyle villages, and almost everything is bought and sold at these markets, where, however, transactions are usually by barter, and scarcely any money changes hands.

The Kabyles of the Djurdjura are on the surface a contented people, notwithstanding their usual poverty and the strict frugality that it necessarily entails; but their wants over and above their own capabilities of supplying them are fortunately few, and of a living they are moderately sure from the land, which, for the greater part, they hold in severalty. They are a sturdy folk, kindly and courteous, and although up among their mountains they have kept themselves aloof, to a surprising extent, from the innovations of Western civilization, they have avoided thereby the double load of vices, the old plus the new, which is so frequently characteristic of Oriental life in Europeanized towns. Under the present administration of the French they are peaceful and law-abiding. And although, like most Eastern uprisings, the insurrection of 1871 came without a warning, it is safe to say that with the reorganization of the Government which followed in its wake, the abolition of the institution of the *Sofs*, and the extinction of the power of the *Marabouts*, the Kabyles were once and for all placed securely under French control, which, imperious and severe as it in some instances is, on the whole does not needlessly oppress them. W. H. C.

Notes.

THE hegira of the publishing trade from Broadway to Fifth Avenue in this city is marked in the case of one of the most travelled firms, D. Appleton & Co., which began business in Exchange Place in 1825 and is now established at No. 72 Fifth Avenue. This house has in press 'Occasional Sermons and Lectures,' by the Rev. John M. Kiely of Brooklyn.

Macmillan & Co. are preparing a new edition of Jane Austen's novels in single volumes, illustrated by Hugh Thomson.

Ginn & Co. issue 'Essays and Letters Selected from the Writings of Ruskin,' edited by Mrs. Lois G. Hufford.

The American Academy of Political and Social Science announces 'The Theory of Sociology,' by Prof. Franklin H. Giddings.

Mme. Ragozin's translation of Leroy-Beau-

lieu's 'Empire of the Tsars and the Russians' (Putnams) has already received detailed criticism from us in connection with Part i., and it is necessary only to mention the appearance of Part ii., "The Institutions." Of Sabatier's popular 'Life of St. Francis of Assisi' we have also spoken. A translation of it by Louise Seymour Houghton has just been issued by Charles Scribner's Sons. It retains the notes, but adds no index.

The merits of the Dent-Macmillan "Temple Shakspere" are worth repeating in connection with the latest issues, viz., "Measure for Measure" and "The Comedy of Errors." These are: a handy pocket size, exquisite typography, an account of the sources of each play and probable date of composition, a glossary, a pertinent engraved frontispiece, cheapness.

The *Outlook* Company has issued in a handsomely printed and bound volume, with patent thumb index, a collection of 638 hymns and 471 tunes, under the title of 'The Plymouth Hymnal, for the Church, the Social Meeting, and the Home.' The editor, the Rev. Lyman Abbott, says that in the preparation of it more than five thousand hymns and poems and as many tunes were examined. It includes selections from English, German, Danish, French, and other sources. Among the tunes are more than a score furnished by leading American composers. The editor has followed the idea that "familiarity with, not trivial simplicity of, music is the secret of good congregational singing." The present collection is certainly a vast improvement on those of which Henry Ward Beecher said that their tunes were "the very emptiness of fluent noise," and that they might be sung a hundred times and as often forgotten because "there is nothing to remember." On the other hand, one reads with amazement, in the introduction, that "the editor of to-day is no longer shut up to German chorals, which are almost uniformly unmelodious." In the single collection of Bach's chorals published by Breitkopf & Härtel there is more original melody and infinitely more stirring harmony than could be distilled from a hundred 'Plymouth Hymnals.'

It is related of Liszt that if he accidentally struck a wrong note, he did not take the trouble to correct it, but made it sound all right by slightly altering the harmony. Of course it took genius to do this in his way, with a smile of conscious superiority on the lips, but every pianist of ability might make himself proof against serious accidents by familiarity with treatises on harmony. There is certainly no lack of them, but rather a superabundance. The latest arrival is 'Analytical Harmony,' by A. J. Goodrich (Cincinnati: John Church Co.). It is a volume of more than 400 pages, with 900 examples in musical type. Although it is clearly written, we doubt whether it is as well adapted for beginners as some other treatises; but the careful student of the subject will find many interesting and useful suggestions here. The author deserves special praise for basing his doctrines not on previous theoretical works, most of which are somewhat antiquated, but on the compositions of those modern masters who have so greatly enlarged the boundaries of harmony.

'The Gipsy Road,' by Grenville A. J. Cole (Macmillan), is a pleasantly written and well-printed account of a cycling tour through Hungary, Bohemia, and other parts of eastern Europe. It will not burden the reader with useful information, but it gives a sense of charm and picturesqueness and open air and sunshine which is well supplemented by the illustrations. These are drawn by Mr. Edmund H. New in a style reminiscent of early wood engravings, from "kodaks" taken by Mr. Gerard W. Butler, and are excellent, showing clean delineation, and much decorative feeling in the initials and head and tail-pieces.

We have been tardily supplied with a memorial volume published by Little, Brown & Co., Boston, consisting of a sketch of the life of the late Josiah Gardner Abbott, LL.D., of that city, read before the Old Residents' Historical Association of Lowell by Charles Cowley, LL.D., with the proceedings of the bar on occasion of Judge Abbott's death, June 2, 1891. From these several tributes one may get a very good idea of the character of a War Democrat who never cut loose from his party connection, and some light on his New England associates in politics and in the legal profession. His brief term as Congressman brought him into prominence by his appointment to serve on the Hayes-Tilden Electoral Commission of 1877, by whose decision he abided, while holding the principles of the decision dangerous in the extreme. A draft of an address on behalf of the minority of the commission, prepared by him but never issued, is given in the appendix to the present volume, whose historical worth it enhances. A portrait of Judge Abbott forms the frontispiece.

To whatever causes it may be due, and we could suggest several, Americans and Englishmen are beginning to discover the existence of Spain. Books on Spain are multiplying, and while a good history in English of that country still remains to be written, we cannot but welcome such as are now issuing from the press as calculated at least to create a demand and pave the way for something better. The 'Christian Recovery of Spain,' by Henry Edward Watts, in the "Story of the Nations" series (Putnams), is commendable in many ways. The author is evidently in full sympathy with his subject, not forgetting his Anglo-Saxon standards of moral excellence, but not measuring Spain and the Spaniards relentlessly by these standards. He has explored far enough to realize some of the grosser errors of other historians, and has apparently come into sufficient contact with early documentary records to enable him now and then to swing free from conventional accounts and criticisms. This, together with a straightforward, vigorous style, gives the work a healthy tone, and we can only wish that he had introduced other chapters similar to that on the laws and government of Castile and Aragon, clearing up the political situation, and showing concisely what had been lost or gained during various periods of the turbulent struggle towards national unity. It was a mistake, on the other hand, to take for granted such an intimate knowledge of Queen Isabella and her powerful influence on the destinies of Spain as to skim so lightly over her career. The book has two maps, a good index, and a chronological table of events.

Mr. John Bonner has not succeeded so well with his 'Child's History of Spain' (Harpers). The book will doubtless prove attractive, being richly illustrated, beautifully printed, and tastefully bound. It would certainly prove instructive if a child's interest could be held by it, for the story of Spain is all here, sketched in the briefest possible manner; but the author is extremely trivial in his comment. He has already published Child's Histories of Rome and France, and as it appears that he has designs upon other countries, we would suggest that he purge his text in future of the personal pronoun, and let the facts speak for themselves without ceaseless intrusion of the "I think." He is evidently capable of better work, for his narrative is often spirited for a page or two, as in his account of the Abencerrages; and if any considerable portion of the book were as incisive—minus that omnipresent personal pronoun—as his estimate of Cardinal Ximenes, we should have little but praise to render.

Dr. Fr. Heinrich Reusch's 'Beiträge zur Geschichte des Jesuitenordens' (Munich: Beck) is an admirable discussion of subjects equally interesting to the statesman, the theologian, and the student of ethics, especially in that peculiarly puzzling branch of moral science known as casuistry. The chief topics treated in the volume before us are "The Doctrine of Tyrannicide," "French Jesuits as Gallicans," the Jesuit fiction of the famous "Assembly at Bourgfontaine," in which prominent Jansenists were accused of conspiring to subvert Catholicism and establish pure deism, "The False Arnaud," a drastic illustration of the maxim that the end justifies the means, and a number of minor contributions based to a great extent upon copies of unpublished letters of Jesuits found among the posthumous papers of the late Dr. Döllinger, and setting forth in a strong light the activity of the disciples of Ignatius Loyola as miracle-mongers, dispensers and forgers of indulgences, users and abusers of the confessional, censors of the press, and promoters of the assassination of heretical sovereigns, as in the plots formed against the life of Queen Elizabeth of England. Prof. Reusch, an Old Catholic of the University of Bonn and editor of Döllinger's 'Kleinere Schriften,' published in 1890, has collected a mass of thoroughly authentic and exceedingly valuable facts, which Jesuitical historians have aimed to pervert or to conceal.

'Le Droit de l'Enfant,' by Georges Ohnet (Paris: Ollendorff; New York: Christern), is neither better nor worse than the average Ohnet story. The wicked aristocrat and the noble artisan figure in this volume as they have figured in previous ones. The haughty and guilty wife and the injured and magnanimous husband reappear. There is the proper catastrophe at the end, poetic justice, sentimental reconciliation, wedding and happiness ever after—unless M. Ohnet writes another book. But 'Le Droit de l'Enfant' will sell as all M. Ohnet's novels have sold.

Mme. Jeanne Schultz wrote a very pretty book, 'La Neuvaine de Colette,' and another nearly as good, 'Jean de Kerdren,' but her latest attempt, 'Ce qu'elles peuvent' (Paris: Calmann Lévy; New York: Charles Eitel), is very dull reading. She has endeavored to analyze *à la* Bourget, though she lacks the peculiar gifts of the new Academician. She is very weak in her psychology and weaker still in her expression of it. Bourget exasperates at times, thanks to the intensity of his work; Mme. Schultz simply bores, and gives one the impression that she has already written herself out—which is not at all improbable.

The trustees of Wheaton Seminary, Norton, Mass., have issued in an attractive form, with three portraits, a special number of the school paper, the *Rushlight*, in memory of the late Lucy Larcom. The tributes it contains from her former pupils give a uniform impression of Miss Larcom which does nothing to contradict that made by her poems and her 'New England Girlhood.' Neither her attainments nor her practical achievements are to be pitted against those of women of the present day, to whom the means of intellectual development have been commensurate with the power. The extracts given here from her letters show that, in common with her generation of women, Miss

Larcom was condemned, partially at least, to "beat the void with her wings in vain." Hence, probably, the peculiar vein of sadness, noticeable also in the lives of several of her feminine contemporaries. Her nature, however, was not only a beautiful but a strong one, and the influence she exerted on those who find a pious pleasure in testifying to its depth and lastingness, was of the incalculable kind, not to be measured by educational standards. The 'Life' of Miss Larcom, now in the hands of her friends, will be welcome to those who have had a brief glimpse, even, of her lovely personality.

A little pamphlet of 'Suggestions to Teachers of English in the Secondary Schools,' by Profs. Gayley and Bradley of the University of California, helps to swell the literature of the now famous "Committee of Ten." It contains many sensible observations in which teachers will find their account; but it demands a preparation such as hardly now exists, and a study of English such as no other language receives. This is a sad necessity in the beginning of reform. Copies of the pamphlet may be had on application to the Recorder of Faculties, Berkeley, Cal., for the postage, five cents.

The Municipal League of Philadelphia has issued in a rather bulky volume the Proceedings of the National Conference for Good City Government held at Philadelphia in January last. Its essential value lies in the first half-dozen papers—succinct accounts of the governments of Boston, Brooklyn, Chicago, Baltimore, Philadelphia, and New York; and in the appended Bibliography of Municipal Government and Reform.

The coming summer meeting to be held at Oxford under the auspices of the University Extension is to begin on July 27 and last until August 24. Thus it will cover the two weeks in August during which the hospitality of the University is to be extended to the British Association. These two meetings will, for this year at least, remove from Oxford the reproach of lying idle for all educational purposes during four months every year, and may be accepted in a sort as an equivalent for the Cambridge summer-term, the Oxford counterpart of which has never established any hold either upon the lecturers or the undergraduates of Oxford colleges. An unusually varied and interesting programme has been prepared under the direction of Mr. M. E. Sadler of Christchurch, the indefatigable Oxford secretary. Most conspicuous upon the list is the contemplated series of lectures on the history of the seventeenth century, to be given by S. R. Gardner, W. Pater, J. Fiske, Sir Frederick Pollock, Dr. Fairbairn, A. L. Smith, Morse Stephens, D. G. Ritchie, and others. Messrs. A. Sidgwick and Churton Collins are to lecture on Greek literature. On the life and duties of the citizen, a course for teachers is announced to be given by Sir William Anson, Sir George Chesney, Mr. Grahame Wallace, and others. In the museums there will be courses on geology, anthropology, chemistry, astronomy, hygiene, and physiography. The Ruskin teacher of drawing announces a course in sketching from nature. Mr. H. Courthorpe Bowen and Prof. Rein (of Jena) announce a course on the theory and practice of teaching. Past and present members of the Oxford Dramatic Society are to give two performances of Browning's "Strafford," and there are to be numerous concerts and organ recitals, as well as a debate on temperance legislation, which Mr. Auberon Herbert and Lady Somerset will open. Theological lectures are promised at Manchester College, as well as a course by the Rev. Charles Gore, editor of 'Lux Mundi.' Mr. Bryce is to deliver, on July 27, the inaugural lecture on "The Worth of the Study of the Ancient Languages to Our Time." This subject is peculiarly apposite in view of Mr. Churton Collins's successful inauguration of the teaching of Greek as a feature of the English University Extension.

—Mr. M. W. Maccallum, professor in the University of Sydney, has written an interesting volume on 'Tennyson's Idylls of the King and Arthurian Story from the XVIth Century' (Macmillan). In an introduction of about a hundred pages, facts and current theories about King Arthur as a mythological and as an historical personage are summed up, and a brief sketch of the romantic Arthur literature to the Reformation is furnished. This introductory chapter lays no claim to originality. It is very readable, however, and, though one may easily find weak places in its information, is full and accurate enough to answer the author's purpose and the purpose of most of his readers. The chapters that follow give a history of the Round Table material in European literature from the Restoration to the present time, and an elaborate study of the Idylls of the King. In this part of his work Mr. Maccallum has acquitted himself well. Chapters i-v. will be welcome alike to the Tennysonian and to the student of Arthurian influences, and the special chapters on the "Idylls" are decidedly worth reading, whether one agrees with them or not. Mr. Maccallum writes agreeably and with much good sense, but he shows a disposition to push allegory pretty far in his interpretation of the "Idylls." We do not like his attempt to tag Lancelot, who, as he is forced to admit after all, is a character "elaborated before the allegory became the ruling thought of the poem."

—Mr. Stopford Brooke's 'Tennyson, his Art and Relation to Modern Life' (Putnams), is obviously a course of popular lectures—whether actually delivered or not—and we wish the author had chosen to tell his readers so at the outset. Such frankness, besides being engaging, would have prepared one for the iteration, the rhetorical perorations of the chapters, the formal beginnings over and over again, and all the other necessary tricks of the lecturer. Even the sermonizing—of which there is a good deal—would then have passed, for we expect didactics from the desk. Yet the book is welcome. Mr. Brooke says interesting things, some of them new, about Tennyson's art, and, in particular, about his artistic use of nature, and he talks charmingly, as usual. His discussion of the poet's ethics and social science is less pertinent. Tennyson was so much of an artist and so little of a philosopher that it seems almost perverse to interpret "The Princess" in terms of the "woman question," or to explain that "Lady Clara Vere de Vere" is not an assault on the House of Lords. Still, we always read Mr. Brooke's own views on such topics with interest. The "Idylls of the King" are, of course, treated at length, and, as it seems to us, with overmuch protestation about "Soul at war with Sense." It is a great pity that Tennyson ever wrote those lines in "To the Queen" that make all this allegorizing possible. The remark that "from Brittany [the Arthur-saga] returned to Wales and crossed the March into England in the *Brut* of Layamon," is a bad blunder if it means what it says. One wonders, too, what Mr. Brooke means by his assertion that "The *Revenge*" is "informed by the very ballad-music of the [Elizabethan] time." There are not many of these roving shots, however, and, in spite of some amusing dogmatism and an occasional touch of sentimentality, the little book is thoroughly agreeable, and will reward a not too painful reading.

—The English Folk-Lore Society has issued to its members as the extra publication for 1893 (and placed 390 copies on sale for the public), 'The First Nine Books of the Danish History of Saxo Grammaticus,' translated by Oliver Elton, B.A., with some considerations on Saxo's sources, historical methods, and folk-lore by Frederick York Powell, M.A., F.S.A. (London: D. Nutt). The English reader has previously known Saxo only as the first chronicler of the Hamlet story, and has had no idea of the wealth of legendary lore contained in the first nine books dealing with the pagan and mythical period of Danish history. The introduction contains an account of the writer and the preservation of his work (the present translation is based upon Holder's text), as well as an extensive examination of Saxo's sources and his contribution to folk-lore. The folk-lore material has been arranged by Mr. Powell in eleven classes of subjects dealing with political institutions, custom law, statute laws, war, social life and manners, supernatural beings, funeral rites and eschatology, magic and folk-science, saws and proverbs, folk-history and folk-tales. A separate section is devoted to an examination of Saxo's mythology. Besides five indexes of persons and places, Norse poems cited, sagas cited, modern scholars cited, classics, etc., cited, there are four appendices containing passages from Saxo's later books, note on Saxo's Hamlet, genealogies of kings, and last news of Starcad. This outline of contents will give some idea of the great value of the work and its varied range. The translator has endeavored to preserve the curious style of his author—a style which has commanded the admiration of later readers, and which is based largely upon Valerius Maximus and Martianus Capella.

—The inaugural lecture of the newly elected Corpus Professor of Latin, Robinson Ellis, took place in the Hall of Corpus Christi College, Oxford, on May 24. The subject was Phædrus's fables, and the lecture has been published by the Clarendon Press. Less fragmentary than the German "programmes," and more popular as well as of maturer scholarship than German "Doctor dissertations," the English inaugural lecture as here exemplified is an admirable means for publishing scholarly research—of a certain easily apprehensible kind—which can hardly be made too much of. Beginning with the known facts of the life of Phædrus, Prof. Ellis wove into his statement of them a careful analysis of the universally accredited works of that fabulist. This led him to give a history of the study of Phædrus, and to show how far he was and was not known to scholars down to the time of the *editio princeps* of 1596. Next came a careful bibliography and a circumstantial account of the vicissitudes undergone by the various Phædrus manuscripts. Then, in connection with the new fables first published in 1808 by Cassitti, arose the question whether or no they were attributable to Phædrus. These thirty-one fables of the *Appendix Perottina*, though commonly attributed to Phædrus, were regarded by Prof. Ellis as not by him but by some imitator. His grounds for this belief rest upon a series of fresh and convincing *aperçus*

of the style and personal qualities revealed in the fables of undoubted authenticity. Taking up Lessing's attacks upon the Roman fabulist, and admitting the faults found by the great German in Phædrus's work, the lecturer added one or two new kindred criticisms, and then contended that there was little or no reason for holding Phædrus responsible for such defects. Previous versions, in many cases Greek versions, contained these lapses, and his final verdict is: "I suspect that if we knew the earliest shape which any given fable took, we should find that it came from the hands of Phædrus improved and dignified." "Whether in language," he added, "or in the general style of his fables, Phædrus may be ranked among the best writers of Rome; the Latin of the fables is the pure, undebased Latin of the best period of the golden, not the silver age."

—It is not often that a twenty-eight-page pamphlet of such interest falls into our hands as 'The Forty-eight Hours Week: A Year's Experiment and its Results at the Salford Iron Works, Manchester,' by William Mather, M.P. (Manchester: *Guardian* Office). Any person who desires to have at hand the details and statistics of a forty-eight hours experiment as fairly tried by an engineering firm employing 1,200 hands, will possess himself of a copy. Mr. Mather's high character, in and out of Parliament, is a guarantee of the correctness of the statements contained. He is, moreover, opposed to any legislation in the direction of an eight-hours day, believing that such would be suited for certain classes of industry only. His firm entered upon the present experiment with hope, but with considerable hesitation. They exacted an engagement from the Trade Union of Amalgamated Society of Engineers that, if unsuccessful, they should be free to revert to the old fifty-three hours' scale, and magnanimously insisted that within the year no effort should be made to press the new scale upon other firms. The hours adopted were 7:45 to noon, and 1 to 5:30, five days of the week, and 7:45 to noon on Saturdays. The experiment appears to have proved a complete success. An increase of 0.4 per cent. in the rates of wages to turnover was curiously balanced by the saving of a similar percentage on the turnover in economy in lighting, wear and tear, fuel and lubricants, and miscellaneous stores. "Lost time without leave" was reduced from 2.46 per cent. to 0.46 per cent. The loss to the pieceworkers (at the old rates) was but small, and tended to diminish—being in the first four months 1.76 per cent. less than the old average, in the second 1.58, and in the third but 0.78. "Our observations, and the careful supervision of our foremen, have not detected that our workpeople have consciously made anything like 'a spurt' in the trial year, hoping thereby to gain a permanent reduction of hours, with the intention of easing off afterwards. . . . It would, in fact, be impossible to sustain a conspiracy of endeavor so long, if any strain accompanied it." Better workmanship and greater steadiness are apparent all round. Coming to work after a comfortable breakfast with their families has led the grog-shops to be less frequented for sustaining "nips." The moral tone is improved. There is more general eagerness to commence work at once. The apprentices are brighter and more amenable to discipline. A better tone is given to the whole day's work. The success of Mr. Mather's experiment is likely to have far-reaching consequences. Already, after full consultation of the Lords of the Admiralty with him, the 30,000 workers in the Royal Dockyards have had their hours similarly reduced, and the results there are so gratifying that doubtless before long the far larger number employed in the Army Departments will be placed upon a like footing. The outcome of this interesting experiment is a singular commentary upon the supposed incapacity of a highly paid, unprotected community to compete with the protected, long-houred, poorly-paid workers of the Continent.

—The last (ninth) annual meeting in Calcutta of the Lady Dufferin Fund for medical aid to the women of India disclosed how a modest effort of private philanthropy has practically developed into a great national movement. When Lady Dufferin left India in 1888, she had instituted a system of medical service by women physicians, which that year gave hospital relief to 2,500 in-patients and about 100,000 out-patients. At the end of Lady Lansdowne's five-years' administration (the wife of the Governor-General of India is ex officio the executive of the association in India), the annual number helped had risen to 12,500 in-patients and 600,000 out-patients. Through the aid of local committees, medical treatment is now also extended to women whose caste prohibits them from coming to the hospital, and who are too poor to pay fees. Lady Dufferin's aim was to restore health to thousands of Indian women and children who needlessly suffered and died from ignorance of sanitary principles, and whose caste customs and prejudices cut them off from the services of male physicians. The scheme has not only saved much suffering, but has been the source of a liberal education to the native communities in which women physicians have done their work. Many natives have contributed to the fund, and a number of Indian and Eurasian women have been induced to study medicine. Thus, the foundations of the scheme being laid in native Indian agencies "under skilled English control," an Indian female medical profession is being created, and philanthropic English men and women are now asked to contribute special funds for the further training of native women in England. The scholarships thus provided will be given to natives who have already shown ability in their medical studies and professional work, and who are recommended by the Indian committees for further training.

THE HEIMSKRINGLA.

The Stories of the Kings of Norway called the Round World (Heimskringla). By Snorri Sturluson. Done into English out of the Icelandic by William Morris and Eirikr Magnusson. Vol. I. London: Bernard Quaritch. 1893.

THE editors of the "Saga Library" have done wisely to select the 'Heimskringla' for early translation in the series of which the present volume is the third. It might, perhaps, with even greater propriety have formed the initial work of the whole, for, although it is the history of the kings of Norway, it supplies, in reality, the broad background that fills in nearly the whole scene of the Sagas, wherever their action may be. Even those of them which are specifically Icelandic have, almost without exception, direct points of contact with Norway, and are frequently far more intelligible in the light of the additional detail furnished by the Sagas of the kings and earls under whom the Icelanders constantly served as men-at-arms and sung as scalds. The intimacy of this contact and its continuity are sufficiently indicated when we remember that the 'Heimskringla' itself was written by an Icelander, who collected his material mainly from sources orally transmitted in both Iceland and Norway three centuries after the settlement of the island by Norsemen.

The present volume is the first of four in which the whole work is to be published. Beginning at the beginning, with Snorri's preface, it takes us to the end of the Saga of Olaf Tryggvason, which is followed by thirty pages of explanations of the figures contained in the verses, and there is a large map of Norway during the Saga period on a separate sheet in a pocket. Like its predecessors, it is a superb piece of book-making without and within. It shares, too, with its predecessors in the "Library," and with the earlier versions from the Icelandic by its two collaborators, the excellences and the faults that have become characteristic, only that the former have increased both in quantity and in quality. Leaving wholly aside the diction of the strophes, of which more anon, there is, however, in this last volume, just as there was in the first, the same use of a pseudo-archaic phraseology that has never had an existence outside of these pages. We have dwelt upon it here before, and it is still, although we have had abundant time to grow accustomed to it, a blemish and an irritation. This Morrisese, for it crops out more or less in all William Morris's writing and plainly belongs to him, finds its justification here, of course, in an attempt to render closely in Saxon equivalents the Teutonic words of the original. This, within limits, is not infrequently a distinct gain in picturesqueness. We have, to select instances at random, *unwrathfully*, *therethrough*, *a-shipboard*, *a-night-tide*, *north-away*, *east-away*, *west-over-sea;* but what about "in the end waxed King Harald so *wood-wroth*," or "Our swords are dull and all *to-sharded*"? Aside from the mere choice of diction there are some few instances of infelicitous translation. From its prominence, among other places on the title-page, the most glaring of them is the rendition of *Heimskringla* by "the Round World." Snorri's work, it will be remembered, owes its Icelandic name to the first two words of the MS. *Kringla heimsins*, from which a new compound has been formed. The words, however, mean "the circle of the earth," *orbis terrarum*, and refer to the supposed discoid form of the world. In a sense a disc is, of course, round, but "the round world" suggests nothing to us but the modern idea of the sphere. Conceived as a disc in the encircling sea, the description of the earth in Snorri's first chapter has an entirely different signification from that conveyed by the translation.

The problem of the strophes is a difficult one to solve at any time, nor is it by any manner of means certain that it has yet been successfully solved either here or elsewhere. Here and in the other Sagas the scaldic verses are such a component part of the text that they cannot possibly be eliminated without serious loss. They have always been a stumbling-block to English translators, who, one and all, have met with but varying degrees of ill-success in their attempted renditions. The difficulty is inherent. They represent a development which, at the best, even in the North was ephemeral, and now is past and gone for ever. From present indications, the time will no doubt come when we shall be as familiar in English poetry with the whole Pantheon of Northern gods as we are now with those of

Greece and Rome, and their attributes may well furnish as intelligible an imagery. The present translators have notably contributed to bring about such a result, and Wagner in his tetralogy has sufficiently shown its possibilities. The poetic phraseology of the scalds, however, is an entirely different matter. It is absolutely a dead-letter. What, for instance, is to be made of such a strophe as this from the Saga of Harald Greycloak, here faithfully enough translated, too?

> "Surely from henceforth should I,
> Speeder of skates of isle-mead,
> Find setting fair to me-ward
> Thy breeze of giant maidens.
> Since now we needs must hand thee,
> Chooser of hawk-land's jewels,
> That very lair of the ling-worm
> Which long time was my father's."

The notes at the back of the book explain that "speeder of skates of isle-mead" means "a sea-farer, a sea-king, here King Harald himself"; that "breeze of giant-maidens" means "mind"; that "hawk-land's jewel" means "gold"; and that "lair of the ling-worm" is "gold-ring." Eywind, the scald who sang it, according to the Saga was compelled by Harald to redeem himself from disfavor with a famous gold ring which he owned. He says: "Henceforth, O King, I should have thy favor, since now, Chooser of Gold, I must give thee the ring that was an heirloom from my father." In another verse, "foe of the flame-flash of the yew-seat" means "an open-handed person"; "gladdener of the sparrow of the shield-swarf" (whatever that may be) is "a warrior"; "war-sword's isthmus" is "a shield"; "rooks'-beer" is "blood." There is no use, however, in multiplying instances. Some of these figures are picturesque and vigorous. "Spear-gale" and "helm-storm," for instance, mean "battle"; "flight-shy" and "war-glad" have a true Homeric ring.

On the whole, it cannot be conceded that the rendition of the strophes is a success here any more than elsewhere, and perhaps it is a physical impossibility to make it so. The least successful of them, nevertheless, are better than the meaningless jingles of Laing's version. All are intelligible with a use of the notes. Inaccuracy is not their fault, nor the prevailing fault of any of these translations. They, and the prose as well, suffer as a whole from a too painstaking literalness which goes persistently forward, no matter what its material. Some passages of the present book owe their particular charm to their absolute fidelity of rendition; others, however, have been hopelessly marred by the self-same cause.

Considering as a separate version the recent reprint of Laing's translation, which originally appeared fifty years ago, this is the third time Snorri's work has been given to us in English. The present translation is noteworthy, wholly apart from other considerations, in that it is the first English version directly from the original Icelandic, Laing's having been made at second hand from Danish. With all its idiosyncrasies of diction (and they are, after all, but that), this is a distinct gain in fidelity to the original text, and after the dialect has been mastered the value of the 'Heimskringla' as history, and the charm of its telling, appeal to one with renewed force. From either point of view, there is nothing at all comparable to it in matter and manner in the early literature of any of the kindred nations. Chronicles there are in plenty, but this, subsequent to the mythical Ynglinga Saga at the beginning of the work, is real history written with precision and a rare degree of feeling and finish.

As a storehouse of historical and literary material the value of the 'Heimskringla' has been recognized chiefly, as is natural, in the north itself, where it has played an important part in the Scandinavian revival from its beginning in the early years of the present century. The first important work of the national movement in literature in point of fact owed its inspiration directly to Snorri's history. The Danish poet Oehlenschläger in Germany during the winter of 1805 had accidentally happened, in the library of the University of Halle, upon a copy of the half-forgotten classic, and, fired with enthusiasm, wrote then and there the tragedy of "Hakon Jarl," still considered one of the masterpieces of Danish literature. The movement thus begun with this and other works whose material was taken from the early history and legends of the north, has since struck firm root in other soil than that of Scandinavia. English literature, both in England and America, has numerous instances to show of its influence. A familiar one is the "Saga of King Olaf," picturesquely told by Longfellow in the "Tales of a Wayside Inn," whose source, again, is this very book.

Apart, however, from questions of the utility of the material, this old work for itself is most interesting reading, with the possible exception of some of its earliest part, which is little more than a chronicle of battle and murder and sudden death, without any of the details that make even such sanguinary history entertaining. None of it is quite the record of "knights and ladies' gentle deeds," but, in spite of its violence, as soon as he is able to obtain good and sufficient data, Snorri makes his Sagas read like an historical novel, only without the exaggerated phraseology and melodramatic action characteristic of that class of works. It is impossible to reconstruct such a period in a novel. Inevitably it turns out to be, to a greater or less extent, but modern thought masquerading in ancient costume. Sagas like those of Hakon the Good and Olaf Tryggvason, on the other hand, are genuine *Culturgeschichte*, except that altogether they are an actual unity, rather than a mosaic of no matter how carefully correlated pieces.

The new 'Heimskringla' is a work of no mean importance in its particular field. Laing's version has been, for half a century, one of the principal English sources for a knowledge of the Sagas. There was, however, no good reason for its recent reprint without revision. Already this must look to be superseded by the present translation, which will much more than fill its place.

MORE FICTION.

The Recipe for Diamonds. By C. J. Cutcliffe Hyne. D. Appleton & Co.

The Two-Legged Wolf. By N. N. Karazin. Translated from the Russian by Boris Lanin. Rand, McNally & Co.

Poushkin's Prose Tales. Translated from the Russian by T. Keane. London: George Bell & Sons; New York: Macmillan.

A Daughter of To-day. By Mrs. Everard Cotes (Sara Jeannette Duncan). D. Appleton & Co.

Pastime Stories. By Thomas Nelson Page. Harper & Brothers.

The Robb's Island Wreck, and Other Stories. By Lynn R. Meekins. Chicago and Cambridge: Stone & Kimball.

WHOEVER is tempted to follow 'The Recipe for Diamonds' will find himself tasting a variety of adventure, from Norway shooting to Mediterranean fortune-hunting. Chance discovers an old Spanish MS. in Genoa which gives the clue to the hiding-place of a recipe for diamonds. The ignorant provincial schoolmaster whose haphazard purchase it was, enters into reluctant partnership with an adventurer whose scholarly attainments enabled him to decipher the MS., and they agree to start the next day for Minorca—one of the islands of the Balearic Archipelago—where the recipe is said to be hidden in a prehistoric monument together with a pot of the manufactured gems by way of proof. But the schoolmaster plays a scurvy trick on his impecunious partner by stealing off alone at a wickedly early hour. His deserted companion, burning with revenge, finds another partner—this time "a gentleman"—in a gambling hell, and, without waiting for such formalities as the payment of harbor dues, they slip out in a crazy, half-dismantled boat, and race madly across the Mediterranean, determined to reach Port Mahon in advance of the cautious steamer from the peninsula. The cutter proves equal to the emergency, and, the rascally schoolmaster being circumvented, the argonauts rush to the hoary depository, only to find that an unsuspected element has entered into and upset their calculations. The recipe is obliterated. It seems that a shrewd, marvellously endowed blind Jew, overhearing the project in the Genoese restaurant, has stolen a march and secured the recipe, with the aid of a kodak and calcium light. Revenge now has a double spur, and another mad race ensues to capture the photographic plate, with the island of Majorca for the field of action.

The narrative has plenty of dash and go—so much, indeed, that accuracy is left far behind. The geographical misplacings and misspellings might be attributed to caprice rather than carelessness were not the author's hazardous linguistic ventures scattered all through the book. He deplores English perversity in calling Mallorca Majorca, but himself uses the English name of the smaller island, and inconsistently anglicises the name of an historic figure who was born, not at "Miramas" (Miramar), but at Palma. Those who have visited the islands will suspect that the local coloring was not derived from personal observation, although mistakes are easily made in a hasty tour; but a discrepancy of six centuries in the date of the building of the convent wall of Valldemosa is rather wide. These are trifling matters, however, compared with the vulgarity of tone which mars the whole story, and the apparent assumption that a man may shirk the payment of his just debts, keep disreputable company, and still be a gentleman provided he maintains a lofty scorn of his surroundings and possesses certain accomplishments.

Sequels to successful novels are, as a rule, unsatisfactory. Karazin's 'Two-Legged Wolf' is a sequel to an untranslated romance, 'Among the Reeds,' which may serve to account for the very mild character of the interest, so far as the slender thread of plot and story is concerned. The author is not a powerful writer, and his chief merit lies in a fairly vivid description of the landscape and people of the steppes of western Asia, which form his favorite theme. The 'Two-Legged Wolf' is a Turkoman, Atam-Kul by name, who has served under the Russians and risen to the rank of officer, after having slain his brother in order to appropriate the whole of their father's estate. At the time the story opens, he has deserted from the Russians, and is the bandit leader of roving Turkomans who are obstructing the

march of the former to Khiva. In the Russian camp there is but one woman, Natalia, with her son, the child of an officer who figured in the tale to which this is a sequel, and who has deserted her, omitting marriage because of her inferior birth. Natalia and her son are the pets of the Russian force, to whom Natalia is supposed to serve as nurse when necessary. Officers and men vie with each other in securing for them every comfort and even luxury. Atam-Kul has seen Natalia and wishes to make her his wife. Naturally, she recoils from the savage Turkoman, and he plots to steal her. The romance consists of a description of the advance of the Russians on Khiva, their sufferings, Atam-Kul's wily entrance to the camp, his theft of the little boy, Natalia's flight to him in order to save her child's life, the agony of despair on the part of a lame Cossack officer who is deeply in love with her, her eventual rescue, rejection of her betrayer of former days, wedding with the lame Cossack, and peaceful, happy life thereafter. The author always illustrates his own books, and therefore they can be said to be truly illustrated. It must be confessed, however, that his strong point does not lie so much in writing and illustrating novels as in making designs for table porcelain, in which line he is famous. The occasional specimens of his art in this direction, which are to be seen at one of our great shops, will be likely to commend him to our public far more than his literary efforts, though they afford but an inadequate idea of his talents as displayed on a large scale. The translation is admirably done, and occasional notes help to a right understanding of the allusions.

Alexander Pushkin's services to the Russian language in general, and in the matter of poetry in particular, have been widely and adequately recognized, but this very appreciation on one point has, apparently, cast a shadow on his equally great services to the language in the direction of prose. Before his day the only Russian romances which had the slightest tinge of modernity in either language or style were, practically, the historian Karamzin's sweetish sentimental little stories, which are now interesting solely as examples in the progress of literature, and are hopelessly antiquated in feeling, form, and scope. Pushkin's short stories really offer the foundation on which the giants of Russian literature, who rose in the generation that succeeded him, built their splendid structures. It is astonishing how fresh and interesting, how true to modern life and national feeling, are these stories written in the first third of the present century; especially when we take into consideration the fact that Pushkin himself was the person who did more than any one man to make the Russian language what it is to-day, a flexible, beautiful, all-sufficient medium for the expression of every delicate shade of thought. Lomonosoff, who began the reformation of the unwieldy ancient tongue into a literary language in the middle of the last century, exists to-day chiefly as a name, and his pompous, tedious style long ago ceased to have any influence. On the contrary, Pushkin remains a living force in the education of every writer in the land, and will remain so as long as Russian authors use their pens or Russian laymen speak. It is true that Gogol is the father of all the modern realistic romances in Russian, which have opened up a new perspective to the world, and that Gogol's style is as unlike that of Pushkin, his contemporary, as possible. Nevertheless, no one can read these stories without feeling that the kinship between Pushkin and Turgeneff is very close indeed. Pushkin lacks Turgeneff's amazing power of condensation, both of sentiment and of facts, which forces the reader to dilute the sentiment and supply volumes between the facts, while he peruses, over and over again, the exquisite phrases which fascinate him like many-faceted jewels. But his touch is sure, his observation is fairly acute, his language melodious and beautiful in the extreme, as it is in his inimitable poetry, while his architecture, so to speak, is compact and perfect, as Turgeneff's was after him.

The nine stories contained in this volume have been beautifully and sympathetically rendered into English; the paper, binding, and typography are a treat to the eye, and all that could be desired, with the exception of one or two words, accidentally omitted. All, or nearly all, of them have been translated previously, and the longest, "The Captain's Daughter," must be tolerably familiar to the public. Still, this complete collection can be heartily recommended to those whose taste for the delicately humorous and the typically Russian have not been spoiled by more highly spiced mental food.

It is to be regretted that, after so much brilliant touching off of artistic and literary Bohemia on both sides of the Channel, Mrs. Cotes should herself have fallen into the toils of conventionality, and wound up her clever study of *décadent* tendencies according to the exigencies of a Mudie three-volume favorite. To leave a final impression that her fresh, original, and really delightful heroine has been after all merely a lay figure, from whom the trappings are stripped with almost vindictive exposure, is a wasteful and ridiculous excess of consideration for the requirements of a novel as understood by literary Philistia. If all egotists of one-and-twenty were disposed of with high-handed justice, gray heads, it is to be feared, would be few. Yet justice unseasoned by mercy is what is dealt to the pretty and fetching correspondent of the *Illustrated Age*, not only by her author in person, but by her girl lover and man friend as well. In a sense, however, she is avenged, for Janet and Kendal illustrate aptly enough Elfrida's *fin-de siècle* tenet of the vulgarizing influence of all matrimonial engagements.

It was a clever thought to place this heroine's beginnings in Sparta, Ill. Otherwise her detachment from traditions, the filial included, and from all save self-made prejudices could not have been so logically accounted for. Only the scion of an unsaturated race could have absorbed atmospheres, in the Quartier Latin or the journalistic purlieus of Fleet Street, with Elfrida Bell's untroubled impartiality. That she should have been able to present her sublime crudities in an accent and form captivating to ears polite in a Kensington drawing-room, is not among the items one mentally labels conceivable, yet is convincing enough as one reads. There and elsewhere she is made the mouthpiece of a great deal of amusing and up-to-date comment on art and morals. Technically, she might be called a "Jeune." It is not until one begins to scent the fact that she is a "leading idea," and not, after all, a flesh and blood freak of Sparta and the nineteenth century, that one ceases to overlook the element of the grotesque in her fascinating personality. In any case, a brighter bit of fiction than this which she infuses with sprightliness is seldom to be met with.

There seems to be no reason in art or nature why Mr. Page's three-and-twenty stories, chiefly in his well-known Southern-negro vein, should not run on into a thousand and one. They are composed out of no rarer stuff than such episodes and anecdotes as almost any man's experience might supply; and any man noting the easy, natural, off-hand manner of their telling might be pardoned for fancying he could do as well himself if he tried. He has but to try, however, to realize that their apparent simplicity is the happy outcome of those indefinable and complex gifts — the eye for effect, the sense of climax, the love of narration — which taken all together make the story-teller's temperament, and without which the would-be spinner of yarns is a bore. These pages seem to talk as they go, and one can almost hear the mellow laugh that might fitly accompany them. They compose a capital volume to kill time withal. Genial, humorous, suggestive of nothing beyond the moment, they offer just the cheer that a mind may grow sleek and fat and — herein lies their flaw in the end — "effete" upon. One looks in vain along their unvarying level for an appeal now and then to the higher intellectual, moral, or æsthetic instincts. Their style is much as chance and American idiom have made it, and the atmosphere of Bœotia is over the scenes through which their amiable and occasionally pathetic figures move.

Four out of Mr. Lynn R. Meekins's eight stories compose a connected series that might fitly be entitled 'Plain Tales from a Country Constituency.' Not until, in the last of them, David Gad steps from the shrievalty to the office of clerk of the court is their conclusion properly reached, and then even the reader who has followed his shrewdly, though honestly, pushed political fortunes so far would not be averse to seeing him take the next rung of the ladder. The unmasking by the way of some of the methods of "bosses," and of the "court-house crowd," contributes to the interest of his history. "Two Booms," which does not belong in the sequence, is a sketch of much vigor and directness of aim. The transformation of Mr. Hoddle, grocer, into Col. Hoddle, the magnate, and his outwitting by J. Maximilian Ross, railroad agent incognito, are told in the vernacular that fits the theme, but with a humorous sense of the situation that relieves the story from vulgarity. The title story is a readable episode of the heroism of the surfmen belonging to an isolated life-saving station. The remaining two are so slight as to call for no special mention, though they reflect no discredit on the company in which they are found.

History of England and the British Empire from B. C. 55 to A. D. 1890. By Edgar Sanderson, M. A. Frederick Warne & Co. 1894. 8vo, pp. 1,098.

THIS work reminds us, and clearly was meant to remind us, of the early editions of Green's 'Short History of the English People.' It is, in many respects, "Green" enlarged. It begins earlier and comes down later; that work contained something over 800 pages, this has 1,100 wider pages; the "Contents" of this is an amplification of the "Chronological Annals"; here are similar genealogical tables, and maps, but more of them. With the material likeness, however, the resemblance ends. Mr. Sanderson has produced a creditable text-book, but not a piece of literature; he has read the sources and weighed the authorities, and his opinions are legitimately come by, but the readily kindling imagination that made the past present to Mr. Green, and caused him to write of Alfred and William as of personal acquaintances, is lacking; the interest here is

the unfailing interest of the long drama of English history—dull indeed must be the book that dims it.

The author has rightly judged that many people are most easily and deeply interested in past conditions when these are brought home to them by the presentation of individual experiences in minute detail. The method is exemplified in the full extracts that he has made from the household roll or account-book of Bishop Swinfield, for 1289-90. It is, indeed, the personal, individual element that first attracts; in this lies the power and value of historical fiction. To study the great charter is well, is indispensable, but if we wished to interest a difficult class, we should turn first to Domesday. What an attractive and valuable introduction to the study of mediæval civilization might be made from the 'Polyptyque' of Abbé Irminon! Too much detail, of course, wearies and disgusts no less than over-generalization, but, judiciously used, it is the chief aid of the teacher of history.

Mr. Sanderson is free from over-fondness either for military affairs or the gossip of courts; he treats of the growth of British empire in the broader sense, the sense in which the better class of English statesmen have undoubtedly striven to extend English influence, and the tone of his book is consonant with the dignity of the theme, impartial without abnegation of opinion, liberal, and rather unusually free from provincialism where foreign relations and the affairs of other nations are concerned. All sides of the national life are touched upon, but the political and social development is more satisfactorily handled than the literary and intellectual, especially in the later periods, where these last sections are apt to dwindle into little more than lists of names. It is apparently inevitable that handbooks should lose any heat or color of narrative they may possess as the contemporary period is approached, and though Mr. Sanderson brings the story down to 1890 (and the ten years of English history from 1880 to 1890 were not uneventful), it rapidly declines in interest after the repeal of the Corn Laws.

It may be pointed out that the author is wrong in assigning the "farthest north" to Markham, in 1876 (p. 984). Markham reached 83° 20′ 26″. Lockwood and Brainard in 1882 reached 83° 23′ 8″. It is quite true, as stated on the same page, that McClure discovered the northwest passage; but if the fact had been mentioned that the passage from sea to sea was made by sledge, no discredit would have been imputed to that able commander. No American will grudge an English historian a quarter of a page out of such a total for the victory of the *Shannon*, but an allusion, at least, to that of the *Bonhomme Richard* might not unreasonably be expected. The reference to Waldseemueller (p. 369) is incorrect, as that cosmographer did himself suggest the name "America." "Modern research," says Mr. Sanderson, "has proved [Sir John de Mandeville's] accuracy in describing what he saw himself" (p. 368). Modern research might possibly have done this much for a once brilliant reputation could it have pointed out one place or one event that "Sir John" had probably seen himself. Is it not about time that Mandeville ceased to be quoted in text-books? There is a fairly good index.

One Hundred and Sixty Allied Families. By John Osborne Austin. Providence, R. I.: J. O. Austin. 1894.

SUPPOSE a genealogically-minded father to draw up for his son four charts, exhibiting (a) his own paternal pedigree for six generations, (b) his maternal, (c) his wife's paternal, and (d) her maternal. Then let him devote a section to each of the (160) families thus displayed, showing the relationship as fully as possible, and, in the case of leading individuals of the group, building up a biographical sketch from historical data, itemized chronologically. This is what Mr. Austin has done, with the caution, accuracy, and antiquarian knowledge which his 'Genealogical Dictionary of Rhode Island' and 'Ancestry of Thirty-three Rhode Islanders' exhibited so remarkably. The result is such a comprehensive survey as Mr. Waters attains by massing the wills of the family connection (Washington, Harvard, Pynchon) he is at work upon; and the value of it is of course not confined to the laborious compiler and his immediate posterity.

Mr. Austin's field is still largely, if not principally, Rhode Island, but by virtue of a Quaker strain he has much to do with Nantucket, as the names of Coffin, Gardner, Hussey, Macy, and Starbuck on his father's side clearly evince; indeed, five of the original nine purchasers of the island figure in his list, as well as five of the original purchasers of Providence from Roger Williams. Baptists and Quakers are in the denominational majority, with a primitive affinity indicated by the rubric "Whipped, imprisoned, fined, etc., in Massachusetts for Quakerism, Baptist belief, and other 'abominable heresies,' etc.," under which sixteen names are enumerated. The south shore of Massachusetts Bay is represented by four *Mayflower* passengers, among others. The most famous colonial personage is Samuel Gorton, who, if he contrived to make himself somewhat uncomfortable to the Puritans of the Bay as well as to his Providence associates, in the end turned out not half a bad citizen. The main incidents in his life are freely chronicled, as are also those of the scarcely less well-known Stephen Bachelder of Hampton, N. H., Mr. Austin's ancestor (like the poet Whittier's), through his daughter, who married Christopher Hussey. Still another Puritan victim on the list is the Baptist William Witter of Lynn, at whose house service was held in 1651 by John Clarke, Obadiah Holmes, and John Crandall, journeying from Newport for that purpose, as Witter was too old to travel; which cost Holmes a fine, imprisonment, and flogging—to the great distress of Puritan apologists ever since.

It will be seen that one may get from these biographies, with their abstracts of wills and inventories, court and church records, and traditions, many interesting glimpses of early New England life and society. As for genealogical research, Mr. Austin has facilitated the use of this volume in every way short of a *prenominal* index, which would have been costly, and a running headline to tell us which one of the 160 families is under consideration. His portrait, which serves as frontispiece, will inspire confidence in a manifestly cool head, controlled by level judgment and a love of truth. These biographic memoranda are laudably free from concealment of human failings and conflicts.

The Five Zoroastrian Gâthâs, with the Zend, Pahlavi, Sanskrit, and Persian Texts. With translations. By Lawrence H. Mills, D.D., Hon. M.A., Oxon. Leipzig and Oxford. Large 8vo, pp. xxx, 622. 1894.

DIFFERENT parts of this book upon the Gâthâs appeared some years ago, but its publication was interrupted by that of the thirty-first volume of the 'Sacred Books of the East,' in which the author translated the entire 'Yasna' (which contains the Gâthâs), together with the Visparad, Afrinagan, and Gâh of the 'Avesta' (1887). This present work, which is the result of extraordinary labor of a very varied character, and the 'Sacred Books of the East' are complementary to each other, and greatly advance our knowledge of the subject. In Dr. Mills's well justified opinion, the Gâthâs of Zoroaster are among the most important monuments of the early life of mankind. They have long been recognized as the genuine productions of a sage who lived in Iran at a very early period, which, like the date of Homer, can never be precisely determined, but which, we may safely conclude, was earlier than the dynasty of the Achemenids; and they are as interesting as they are ancient, for we can trace in them some of the most refined and sublime conceptions as to the nature of the Deity and his accompanying spirits (the so-called Amshaspands), no compositions of equally early date surpassing or perhaps approaching them in analogous delineations. Whereas in the sister-lore of the 'Rig Veda' we have gods who are for the most part the deification of the forces of material nature represented under grossly anthropomorphic images, in the Gâthâs we have spiritual and intellectual attributes supposed to be the characteristics of the highest universal divinity represented, and these attributes are even addressed as separate personal beings, while their names possess the highest moral meaning. They are appealed to and besought to come and be embodied in the politico-religious life of the people.

These ancient hymns are also at the same time expressions of personal feeling on the part of Zarathushtra and his few royal colleagues, who were carrying on a struggle with the idolaters or adherents of the old Aryan heathenism reigning in the Indian hymns of the Vedas. In this earnest effort on the part of a small group of leading chieftains much personal feeling is disclosed, and it is this feature which induces our author and many other critics to accept these hymns as the genuine production of an historical person. They are, however, as difficult as they are celebrated, and the folly of depending on etymology alone for their elucidation is strikingly shown by the fact that the ancient light-gods of the Vedas, the Devas, become the Daevas or evil demons of the 'Avesta.' How could etymology help here? So great have been these difficulties that renderings have often been advanced and then shortly withdrawn by the same writers.

In view of the obscurities encountered in these investigations, Dr. Mills, who is acquainted with the 'Veda' as well as with the 'Avesta,' remarks that while the so-called tradition contained in the Pahlavi translation must be used with caution, it is absolutely necessary to consult it, and neglect of it is fatal to all claims to thorough scholarship. He also asserts that traces of the original meaning of the Gâthâs which it contains may often be found buried amidst a mass of otherwise erroneous traditional comments, and in fact that these traces are often of most value where the comments themselves, regarded as actual attempts at literal and grammatical reproduction, are most faulty. For example, in 'Yasna' 43, 8, the word which now stands in the Zend character as *ufyâ* must once have confronted the translator in the Pahlavi character, for it is translated as if it were misread *napesh*, the two words being spelt in the extremely difficult Pahlavi language with precisely the same cha-

racters. A similar case presents itself in the case of *Vahishtâ*, in 'Yasna' 43, 15; it once stood in Pahlavi characters, for it is translated as if it were *Vakhsht â*, both words, again, being spelt alike in Pahlavi. These suggestions have a very wide bearing, and may have very important results on our future restoration of texts, for many of the grammatical forms of the Zend can be shown to be much more regular than they now appear after their proper spelling has been restored by the same line of reasoning which our author has pursued in the cases indicated. That is to say, we must regard the Zend letters as sometimes still representing more than one sound—a constant peculiarity of theirs in their earlier applications and while they were still solely Pahlavi letters and had not yet assumed their more definite and finished character, as letters of an alphabet specially constructed for the preservation of the letters of the 'Avesta.'

Hence the importance of thoroughly mastering the Pahlavi commentaries, which are also now increasingly prized as an indispensable help by all Avesta scholars, and especially so by the scholars of a large and important school. Dr. Mills has therefore rendered a most important service in giving us, besides the original text and its translation in Latin and English, the Pahlavi translation in both text and translation—a work which they alone can appreciate who have themselves struggled with its difficulties. The author has added the Sanskrit translation of 'Neryosangh,' and this translation is itself translated in the light of the Pahlavi, seeing that it can be correctly read only in this manner, as the Pahlavi rather than the Gâthâ itself was its original. There follows a translation in Parsee-Persian. The extensive additions to our stock of new manuscripts lately received from the East by the author in Oxford are described in the preface, and an exact commentary contains a comprehensive and moderate criticism of former works on the subject. Scholars will no longer have an excuse for neglecting the Pahlavi commentaries or other subsidiary lights in the study of Zoroastrian science.

London Signs and Inscriptions. By Philip Norman. London: Elliot Stock. 1893.

UNLIKE most other cities, London is continually spreading to all points of the compass. There is no physical or other impediment to its growth in any given direction, and after a few years' absence the returning Londoner finds an equal number of new houses in place of green fields all round the vast circle. But while this constant change is going on at the outskirts, the central region, and especially that part of it technically known as the City, is very slowly altered. Indeed, many of its alleys and buildings would still be recognizable by one who had lived in the days of Sir Christopher Wren. This was certainly the case a few years ago, but the so-called march of improvement and the new streets projected by the County Council threaten destruction to many of the old landmarks. It is fortunate, therefore, that Mr. Norman has collected the mass of interesting facts contained in this volume while it was still possible to do so. Many venerable signs are preserved in the Guildhall Museum; but others are still in their original positions on old buildings and street corners, and are likely to disappear through accident or carelessness, as has happened in too many cases already. On the other hand, while much has been lost, some valuable finds have also been made in recent years. In London, as in Rome, there has been a long accumulation of débris, and, as a result, the present town is raised many feet above the level of Roman London; and in digging the deep foundations of modern buildings many signs and other relics have come to light—for that this custom of street signs is as old as the Romans is shown by discoveries at Pompeii and elsewhere.

According to Mr. Norman, it was after the great fire of 1666 that sculptured house and street signs were generally adopted in London. They had long been used in Holland, and, apart from their artistic merit, were no doubt a great convenience, inasmuch as the modern system of numbering streets did not come into vogue till the following century. How interesting these signs are, how intimately associated with the history and literature of the country, will appear from a few examples.

Of all the celebrated taverns of London none has a fairer title to celebrity than the Boar's Head in Eastcheap. It is referred to as a well-known place of entertainment in a lease still extant dated 1537, and it was doubtless frequented by Shakspere and his friends. It was destroyed in the great fire, rebuilt on the same spot, and finally removed to make room for the approaches to the present London Bridge. Its sign was discovered in 1834, on the removal of Whitechapel Mount, an elevated piece of ground, supposed by some authorities to have been composed of rubbish from the fire, and by others to have been used as a burial-place for the victims of the Plague. The inscription on the sign reads as follows: "William Brooke Landlord of the Bores Hedde Estchepe. 1566."

Another famous inn was the Bull, frequented by old Hobson, of "Hobson's choice," the Cambridge carrier of Milton's day. When the old house was destroyed in 1866, a sculptured sign dated 1642 was rescued. In the Guildhall Museum the American traveller will view with interest, not unmixed with astonishment and a sense of ownership, the sign of the Spread Eagle, which, though dated 1669, is supposed to have marked the house in Bread Street in which Milton was born, and in which his father carried on the business of scrivener. A document in the British Museum, dated 1602, refers to "the new shop of John Milton, scrivener, at the Spread Eagle in Bread Street." The sign of the Dog and Duck, dated 1716, is now embedded in the wall of Bethlehem Hospital. This inn was in St. George's Fields, where were many ducking-ponds frequented by sporting cockneys. Later on, a mineral spring was discovered, the water of which was recommended by Dr. Johnson to Mrs. Thrale, and the Dog and Duck became a fashionable resort. But this spring, like Sadler's Wells and other London spas, has long since disappeared.

Of these signs, and of many others, Mr. Norman gives excellent illustrations, as also of some curious old houses which have recently been torn down. He has accumulated a remarkable fund of information, and, in spite of a tendency to prolixity and repetition, he has produced a very readable book, and deserves the thanks of all who are interested in such subjects.

Among the Moors. By G. Montbard. London: Low; New York: Charles Scribner's Sons. 1894.

WE congratulate Mr. Montbard on having spent six pleasant weeks in Morocco. He saw curious people and things, had a number of interesting if commonplace experiences, and enjoyed the society of congenial companions with whom he could indulge in harmless witticisms. We do not congratulate either him or his publisher on having inflicted on us a useless book five years later. It could have but one reason. We should be unfair in supposing that it was meant to be of profit to us, as it makes no pretence of telling anything new or worth remembering. Its object must be to amuse, and Morocco is strange enough to most people and picturesque enough in itself to make the task not too difficult for moderate talent. What is more, the author shows in more than one single descriptive passage that if he had had judicious advice to correct the faults of his own taste, he would have given us a volume with which to while away agreeably a leisure hour, either heightening our imagination or reviving our memories of the East. Instead, what has he done? He has foisted on us what seems to be a diary furbished up for the occasion—nearly three hundred pages written in the present tense till it becomes utterly wearisome, mixing up narration and description in a way to destroy all interest in either, and to make the reader only long to get through. He has introduced a certain amount of trivial incident, and a large quantity of the silliest attempts at wit that it has been our misfortune to read for a long time. If any one doubts this statement, let him see in the index how many references there are to each of the other members of the party, remembering that nearly every reference indicates a would-be joke; or let him read "A Month After" and the epilogue as specimens of Mr. Montbard's style when he wishes to be humorous. After this it is hardly worth while to cavil at minor defects, like the inflated nonsense of the preface, the use of such words as "vomer" or "appetences" which the ordinary reader will have to look up in the dictionary, or the English of such expressions as "with Forestier and I," or "With precocious perversity in order to amuse they exert themselves unto belabouring." Finally, even if we turn for relief to the numerous illustrations, we are soon forced to the conclusion that too often their chief merit is that they occupy the room of so much text.

Alaskan Grammar and Vocabulary. By Augustus Schultze, D.D. Bethlehem, Pa.: Moravian Publication Office. 1894. 8vo, 70 pp.

THIS is an enlarged and improved edition of a grammar and vocabulary of the Eskimo language of the Kuskoquim district of north-western Alaska, compiled by the Rev. Augustus Schultze, in 1889. The material has been obtained chiefly through the Moravian missionaries of Bethel, on the Kuskoquim River, and some of their pupils. The author has for the most part availed himself of existing grammars of the Labrador dialect for comparison, and, while disclaiming completeness or perfection for his work, not having had personal opportunities in Alaska, hopes that this pioneer attempt may facilitate and shorten the labor of those whose duties as missionaries or as teachers oblige them to acquire a knowledge of the native tongue. For philological purposes, it is to be regretted that Dr. Schultze did not adopt for his transliterations the standard alphabet so generally in use for recording American dialects; but, this reservation made, his little work may be welcomed as beginning the systematic study of the Northern dialects of Alaska, which have for a long time been known only by more or less imperfect vocabularies. The Kuskoquim dialect appears to be rather specialized in the formation of its

words compared with the series of tongues spoken by the Eskimos north of the Yukon; early writers erroneously attributed to it a hybrid vocabulary of both Indian (Tinné) and Innuit origin. The present work shows, however, that the only exotic words included in it are names of objects which have come to be known through contact between the natives and Russians or other civilized visitors and traders. The most prominent characteristics of this dialect appear to be the prevalence of guttural *g*-sounds, and the use of *sh*, where, in the more northern tribes, we find a clear-cut *k* or sibilant *s* in the analogous words. The vocabulary includes about 1,000 verbal forms.

BOOKS OF THE WEEK.

Abreast of the Times: Sermons on Social Subjects. James Pott & Co. $1.25.
Alberg, A. Sophos. Chicago: Bow-Knot Publishing Co.
Brearley, W. H. Wanted, A Copyist. Cassell. 50 cents.

The Nation.

NEW YORK, THURSDAY, JUNE 28, 1894.

The Week.

WE presume that few persons expected that the Senate Sugar investigation would find out many facts pointing to corruption or speculation. It cannot be affirmed that the committee did not want to find the facts—on the contrary, they have shown every disposition to go to the bottom of the subject; but the only witnesses who could have told anything very interesting, the stock-brokers, refused to testify, and there was no effective way of compelling them. On the other hand, much general information was gathered about the doings of the Sugar Trust and their mode of working politics through campaign contributions. The testimony on this point has not been wasted by any means. It has had an effect on public opinion which will be reflected when the sugar schedule comes up in the House. That portion of the Senate schedule which postpones the date when the act shall go into effect until the 1st of January next will almost certainly be rejected by the House. This clause offers the opportunity to a few persons to import all the raw sugar on the world's markets, and pocket the duty when the act goes into operation. It is not necessary that the Sugar Refining Company itself should buy it. Anybody can do so who is sure of being able to sell it to the Trust after the first of January. There is no particular reason why the ordinary shareholders of the company should have any part of this importing profit. An omnibus load of persons could easily pocket the whole. The amount of sugar that might be imported in this interval, so that the tax should be a strictly private speculation, would probably be as much as one-fourth of a year's consumption. It would be much larger if it fell in the first half of the year, when the bulk of the cane-sugar crop comes into market. The tax on one-fourth of a year's supply would be an enormous profit, however, and there is no reason why more than half-a-dozen persons should get any part of it.

There is an important consideration which the Trust constantly keeps in mind, and which its opponents would do well to watch, viz., the relation between what protection the Trust gets and the revenue duty secured by the Government (with incidental protection to American sugar-refiners). If the conference committee should, by a specific schedule, put a duty on raw sugars, with a special discrimination in favor of refined sugars, then, at any time when the public is prepared for it, it will be perfectly easy and practicable to wipe off or reduce the special protection to the Trust without disturbing or even discussing the revenue duty, in which lies the protection of our planters. That is just what the Trust is afraid of; and it is therefore intensely interested in having the bulk of its net protection so entwined with the revenue duty and the incidental protection secured to the planter as, on the one hand, not to be understood by the mass of our people, and, on the other hand, not to be disturbed without raising the whole question. It is of the greatest advantage to the public, and the greatest disadvantage to the Trust, that its own protection be kept distinct from the revenue duty. This is one of the reasons why it so strenuously insists upon getting its protection in the shape of its gains under the 40 per cent. duty, any disturbance of which in the future will raise the question of revenue and start into opposition our United States sugar-growing interests, which it expects to become more powerful every year. On the other hand, if the duty on raw sugars is made distinct from the duty on refined sugar, the statistics will show, even in a few years, that the refined-sugar discrimination yields no revenue to any one except the Trust; and the Government, and the mass of our people, even the planters themselves, will be glad to see wiped out the special protection which helps no one but the refiners.

What is the opinion of the *Tribune* upon the silver attitude which one Republican State convention after another is taking? There have been six such conventions held—Indiana, Ohio, California, Kansas, Maine, and Vermont—and the platform of every one of them has shown a disposition to juggle with the silver question in the hope of catching free-silver votes. That of California came out squarely for the free and unlimited coinage of silver; those of Indiana and Ohio favored bimetallism on the Reed-Lodge plan of forcing England by discriminating tariff duties to abandon the gold standard; and those of Kansas, Maine, and Vermont uttered varying degrees of bimetallic nonsense adapted to their respective localities. It is a fact that not a single Republican State convention has made a straightforward declaration in favor of sound money and against any further trifling with the disastrous and dangerous silver delusion. What has the *Tribune* to say about this? So far as we have been able to discover, nothing. It is almost carried beyond the limits of rational utterance in its abhorrence of Democratic incapacity and incompetence to govern, but the formally announced opinions of its own party upon the most important of existing governmental questions do not excite any comment whatever.

The strongest point of our mighty men of silver in the Senate has always been the Orient. When driven into a corner on matters of fact respecting the currency of civilized nations, their surest escape has been to the "teeming millions" of India and China and Japan, about whose consuming desire for silver and portentous capacity to "absorb" it they have told us many and strange things. Indeed, it was only a little while ago that President Andrews came out with a triumphant proof that silver had not really depreciated after all, inasmuch as a remote corner of China had been found where silver would purchase as much rice as twenty years ago. It has been hard and seemingly scarce worth while to chase down all this wisdom drawn from the East for our confusion, but it looks now as if the East itself would do the chasing down. The Senate debate on coining dollars especially for the Orient has percolated to the Orient itself, and is calling out such discouraging observations as this from the *Japan Mail* of June 2: "It is curious and interesting to note how little information the Senators seem to possess about the currency of Eastern countries." It expresses surprise that any Senator should think, as all seemed to think, that Mexican dollars are largely current in Japan, and gently raps Senator Sherman over the knuckles for speaking of the *yen* as a coin issued by the Chinese Government. All this is depressing enough, and we doubt if we shall ever be able again to hang in trustful confidence on the lips of Jones or Stewart as they discourse of the currency of Cathay through one of its own cycles. A silver prophet without honor out of his own country is truly as pitiable as he is rare.

The Socialist Labor party has had a convention at Cleveland, Ohio, and framed a platform which provides for "the enlargement of the mental and psychic requirements of enlightened mankind" by the very simple method of shortening the hours of labor. It also provides for "the repeal of all laws in restraint of paupers, tramps, and conspiracies," and for State and local employment of the unemployed, and the trial of all offences committed during industrial disturbances by jurors drawn from "the industrial classes." There is, of course, also the usual provision for the Government ownership of railroads, ferries, gasworks, etc. We can, however, hardly call this a well-considered platform,

for it is quite evident that when the Government owned the railroads, ferries, waterworks, electric plants, etc., and was bound to give work to all the unemployed, there would be no industrial disturbances. Nobody in his senses would work for a private employer when he could always get work from the State with short hours. State work would always be easy because the laborer could always punish the State boss, if he pushed him too hard, by voting against him, and the boss could not discharge him, because as soon as he was discharged he would become one of "the unemployed," and the State would have immediately to hire him again. Under these circumstances it is absurd to provide for the trial of offences committed during strikes by "industrial" jurors; there would not be any strikes. The enjoyment the tax-payers, "a highly privileged class which thrives from the unpaid labor of the wage-earner," would find in "the enlarged mental and psychic requirements" of the great army of Coxeyites who would toil in the service of the State, may be more readily imagined than described.

Apropos of this there are some very sensible remarks in the London *Economist*, suggested by the late referendum in Switzerland on "the right to labor," on the extent to which people allowed themselves to be frightened by this Socialist twaddle. As a rule the more difficult, or far-off, or visionary, or absurd the object of an agitation is, the greater the noise its promoters make, and they often manage to frighten the silent and busy classes very seriously. An opportunity of finding out exactly how strong they are, hardly ever offers, because they rarely put up candidates at elections. In Switzerland the Socialists are apparently more numerous and able than in any other country in Europe, because the natives of that school have been reinforced by refugees from all parts of the Continent. They made, too, a prodigious racket, and nearly frightened the Federal Council out of their wits when they demanded State work for all the unemployed. Finally, they demanded a referendum by 52,000 votes, 2,000 more than the legal minimum. The question was submitted to the people after a prolonged discussion, in which all the leading men of the republic took part with their hearts in their mouths. Well, the vote came off the other day, and the Socialists had 80,000 against 300,000. What the Socialists really demand is the abolition of property and the support of all the lazy by the industrious, or, in other words, the conversion of the State into a vast workhouse. There is probably hardly an intelligent man in any community who does not feel that he would die twice over sooner than submit to such a régime, and yet many have vague fears about it. What we have to fear from socialism is mischievous legislative interference with the public credit and with the standard of value, and extravagant public expenditures, and discriminating taxation, and a feeble enforcement of the law against rioters and tramps; but the idea of a "social revolution" is preposterous.

The curious state of mind into which the world is getting on the subject of the unemployed is seen again in the new view of the horrible dangers of a general disarmament. Members of English and French chambers of commerce met in Paris last Friday to discuss that question, and discovered a "consensus of opinion" that such a disarmament would have a most serious effect upon labor, as it would add the 3,750,000 now in European armies to the ranks of the unemployed. The logical implications of such a consensus of opinion are truly bewildering. It would follow that workingmen have been hugely mistaken all these years in imagining that one of their chief grievances is a great standing army supported by taxes wrung in good part from their wages. What they really ought to do is to beg the governments to arm and support several millions more of soldiers so as to diminish competition in the factories and on the farms, and make it easy to strike and keep up wages. Then, too, it would appear that it is another blunder to consider a standing army as itself the most pestiferous collection of the unemployed known to mortals. Economists and statesmen have been all wrong in speaking of it as a deplorable waste of productive power and a terrible drain upon the resources of a nation. If this new view is correct, the bigger the army and the bigger the taxes, the better off labor will be, and the talk of tax-reformers in Italy about reducing the military budget so as to give the laboring man a chance to enjoy untaxed salt and flour, is the sheerest folly, and our disarmament of a million men at the close of the Rebellion was a colossal mistake.

Evidently this new view of an army as a safety-valve to remove the pressure of competition from the laboring classes is all of a piece with the modern idea of an omnipotent state having inexhaustible wealth at command. From maintaining three millions of men under arms in the interests of labor it is only a short step to maintaining all laboring men outright at Government expense. Indeed, if all the flummery and extravagance of an army were done away with, and the men were simply fed and clothed, the money could be made to go much further and support more men and do just so much more good to labor. It is the new idea and dread of the unemployed which drive men into such absurdities. The phenomenon of men out of work is no new one in the world's history. Ever since the division of labor had gone any length, workingmen have been exposed to temporary or permanent loss of their jobs. But formerly men looked at this fact in a common-sense sort of way, hoped for better times, and stirred about to create new industries; and before long everybody that wanted work found it in some form or other. Nowadays there seems to be a new sensation and a new procedure in the matter. Men are no longer out of work, which is not necessarily so bad a thing, but they belong to "the ranks of the unemployed," and that is something fearful, making it incumbent on the State to intervene and perform miracles for their relief. And the vague dread spreads among economists and business men, leading them into such absurdities as supposing that taxation is more easily endured than competition, and that a modern commercial nation is best off with one-tenth of its productive power running to waste.

Gov. Altgeld of Illinois, who tried to keep pace with such executives as Pennoyer of Oregon, Waite of Colorado, and Lewelling of Kansas, by pardoning the anarchists, is now threatened with vengeance by "organized labor" for breaking his pledges on the question of convict labor. During his canvass for the governorship he talked loudly and vehemently against prison labor, and declared that "an honest mechanic should be permitted to work outside the walls of the penitentiary without coming in competition with the product of convict labor." But as executive he has felt constrained as a matter of economy to set the convicts at work, and he has concluded to establish a cigar factory in the State prison at Joliet. He tries to minimize the importance of his action by explaining that he intends to introduce a large number of trades, in order that only a few men may be employed in any one and that the competition of prison labor with outside labor may be reduced as much as possible. But his excuses are of no avail, and the president of the cigarmakers' union has written a letter declaring that, if the Governor carries out his intention of establishing the cigar factory at Joliet, it will be considered a breach of good faith with the labor unions, and they will be revenged upon him. It is delightful to see a demagogue thus tripped up.

The South is making headway with its lynching mania. Gov. Tillman of South Carolina announced recently that he would be glad to head a lynching mob, and now comes the Right Rev. Hugh Miller Thompson, Bishop of Mississippi, formerly an editor of the *Churchman* in this city, and lays it down that the lynching parties are the people "who save delay by simply resuming the natural sove-

reignty delegated by them to the courts, and hang the criminal." The reason why the "people" have "resumed their natural sovereignty" in these cases is that "the laws are slow, the jails are full, and the lawyers are banded together to defeat justice, as they always are." The laws are the laws of the white people of the State; the jails are their jails; the lawyers are under their control; the courts are their courts. Consequently what the bishop admits in their behalf is not that they have resumed their sovereignty, but that they have abdicated it—that popular government in Mississippi is a complete failure. But this is not all. When a bishop approves of the administration of justice by armed mobs, he completes one of the most shocking pictures of anarchy we have ever read of. It would be far more logical for him to throw bombs into court-houses and jails than to justify killing without trial.

Some months ago the League of American Wheelmen held its annual convention, and adopted, by more than a two-thirds vote, an amendment to its constitution restricting membership to whites, in order to prevent the embarrassment caused by occasional applications from men whose only disqualification was the color of their skin. The same question came before the national convention of the American Railway Union in Chicago last week, and a motion to strike out of the constitution the clause declaring that membership shall be restricted to those born of white parents was defeated by a vote of 113 to 102. Even the motive of political advantage and the hope of getting office do not avail to overcome color prejudice. The Republicans of Texas are split into two factions, and will hold rival State conventions, because one element, known as "the Lily Whites," will not consent to sit in meetings of Republican clubs with negroes. So far as this prejudice is concerned, there seems to be but little difference between North and South.

The contest over the Republican nomination for Congress in the Twenty-first Pennsylvania District has brought to light an extraordinary state of things. Two years ago D. B. Heiner was made the candidate; the failure to renominate the then sitting member, according to the Philadelphia *Press*, having been "due, as everybody at all informed perfectly well understood, to the fact that he was not willing to buy off certain other candidates." Heiner's chief rival two years ago was William C. Bond, who is now again seeking the nomination. Local Republican papers openly charge that Heiner's nomination in 1892 was secured through his payment of $3,900 in money and notes in trust for Bond to the latter's brother. Bond has made a lame and halting attempt at denial, but in the course of it confesses his complicity in another form of bribery two years ago. "I have," he says, "an article of agreement, signed, sealed, and witnessed, that in consideration for me nominating Mr. Heiner at this coming district conference Heiner is to nominate me if I am successful at the primaries held in this county on the 16th of June, 1894." This statement is a clear admission of guilt under a Pennsylvania law for the punishment of bribery and fraud at nominating elections and conventions, and yet so dull is the Congressman's moral sense that he sees nothing out of the way in such a performance.

Mr. Croker's malarial affection, which started him for Europe so suddenly a few weeks ago, has disappeared, and he is about to return to us again without warning. The great man seems to be an expert in the use of the dramatic element in politics, for he contrives by his sudden exits and returns to keep the newspapers filled with explanations of his movements. It is said by his champions now that his return is proof positive that he did not run away from the Lexow committee, and that he is clearly not afraid of anybody. As he will arrive here after the committee has adjourned for the summer, and there will be ample opportunity for his ailment to break out again before the committee resumes its work, this demonstration of "who's afraid?" must be taken for what it is worth. In one of his alleged interviews by cable, Croker is credited with complaining of the license of the American press in its attacks upon public men, saying that "some of the American newspapers carry things too far," but that "it's no use to sue them—they can't be brought under the rule of the law." By far the most serious attack ever made upon Croker was not made in a newspaper, but in a pamphlet published openly by Otto Kempner. Why does not Croker sue him for libel and get a vindication which will shut up all the newspapers?

In consequence of the decided and angry tone taken by Germany, Great Britain has made up her mind to relinquish an important part of her gains by her recent treaty with the Congo Free State. Reserving but a few insignificant privileges, she has surrendered her lease of a strip of land twenty-five kilometres broad between Lakes Tanganyika and Albert Edward which would have secured for her an uninterrupted chain of possessions from Cape Colony to Egypt. This rather mortifying step may be interpreted in two ways: it may mean that the British Government is full of the most peaceful and conciliatory intentions—so much so that, having unwittingly given offence to other powers, it is anxious to placate them, even at the price of considerable sacrifices; it may also mean—and this is the more probable explanation—that England has purchased German acquiescence in order to have her hands free for the graver dispute with France. If this be the case, it is very serious. Already, through the vehement speech of the minister of foreign affairs, supported by the unanimous vote of the Chamber, France has committed herself to such an extent that, to escape public humiliation, she must obtain extensive concessions, and nothing could make her more intractable in her demands than the fact that Great Britain has just yielded to Germany. On the other hand, English public opinion, smarting under discomfiture, will be very sensitive to anything resembling subservience, and to the French above all people. Much tact will be required on both sides to cope successfully with the difficulties of the situation.

The two great commissions which were to satisfy the demands of the German agrarians and bimetallists have come and gone, and in spite of the polite phrases of the Prussian Minister von Heyden and the Imperial Secretary Count Posadowsky both agrarians and bimetallists have returned to their homes empty-handed. Public attention is now free to centre once more upon that other great commission which for two years has been busy with the regulation of transactions on the German exchanges, and which has submitted a report to the federal Government such as might have been expected of a body composed of statesmen, scholars, and tradesmen entertaining the most diametrically opposite views as to the proper functions of exchanges. On the whole, the pessimistic view prevails in the report. Thus, there is a provision that dealings in certain stocks or merchandise on future contract may be legally prohibited if a commission, to be appointed by the German chancellor, decides that such transactions are detrimental to the public interests. This commission (composed of "men of science"), as the "representative of the interests of the purchasing public," is also to watch over the issue of shares and bonds of new enterprises. In order to prevent speculation on margin, every produce-exchange broker is to keep a book in which all transactions must be registered, the entries being made public. There is also a clause prohibiting private transactions with employees of commercial houses and persons of "slender resources," and there are various other propositions, all equally laudable as to motive and equally vague as to phraseology, and all smacking of that paternalism which sees in an imperial or royal commission the panacea for all the evils of society.

THE MORAL OF CARNOT'S ASSASSINATION.

IT would be useless to try to conceal from ourselves the fact that M. Carnot's assassination is likely to frighten every man in power in the civilized world. It will unquestionably make his successor very nervous. It was said not long ago by a military writer that a man who did not mind being killed was always a terrible antagonist, and such an antagonist every anarchist who makes these attempts on life and property seems to be. Those anarchists who have been caught are unquestionably fanatics, and the distinguishing mark of a fanatic, as of a lunatic, is that he acts from high motives. When the lunatic murders his wife and family, it is always, or nearly always, under the pressure of some dreadful sense of duty. He does it with a view to save them from some more terrible fate, or in obedience to the command of some mysterious power. The murdering anarchist is, as far as we have seen him, only one degree removed from the poor wife-murderer. "Society" has taken, in his eyes, the place of his own family. He has a solemn mission to do something to bring about its reform, and, as in the case of the ordinary homicidal lunatic, the easiest method of reform which suggests itself to him is killing somebody. But he is removed from the ordinary lunatic to a degree which makes him responsible for his acts. He always tries to run away after throwing his bomb or firing his shot, and always pleads the dictates of his conscience as an excuse or reason why he should not be hanged or guillotined. In no case has a "militant anarchist" committed suicide. He likes to take his chance of escape as a conscientious reformer, and to enjoy the notoriety which follows on his crime; in which, of course, he derives great assistance from the newspapers.

Now, the moral of all this is, that the men whom society calls on to expose themselves in great offices, in the struggle with anarchy and disorder on which the world seems to have entered, ought to be supported by something more than the terrors of the law or the general execution of the assassins. It is not enough, when a man like Carnot or Crispi, or Heaven knows who next, falls under the assassin's dagger, to lament his fate and denounce the criminal. As the world now stands, we hold it to be the solemn duty of all writers, preachers, and professors, who are engaged in the work of reform, to refrain from denunciations of the existing society and social arrangements. Reform is possible without this, by simply acting on the lines of human nature. The common practice among Christian and other socialists and utopians of abusing nearly everybody who succeeds in life as an enemy of the human race, and the existing constitution of society as an engine of fraud and oppression, has undoubtedly done much to produce the "militant anarchist," and give a sort of moral justification to his attacks on life and property. For the novel and remarkable thing about these attempts is that they never appear to be dictated by individual hate or animosity. Any group of well-dressed persons attracts the bomb, and any officer of the Government attracts the dagger or the pistol. This shows that there is a theory behind the thing, and this theory has certainly not come out of the workshops or factories. It has come down from the colleges, libraries, and lecture-rooms, and latterly from the churches. The "thinker" who first gave out that all laboring and indeed all poor men were the victims of "injustice," was the first man to sow the seeds of the frightful insanity with which we are now called on to contend. The injustice of one man can be righted by law or opinion, but the injustice to which all well-to-do people owe their comforts, naturally seems to a half-crazy ignoramus to require sterner and more sweeping measures. Probably thousands of weak brains in both Europe and America are waiting to-day to have their murderous passions lighted up by a word or two in favor of "social evolution" by some light-headed professor or half-baked minister who has been overcome by the spectacle of human misery.

The church for ages did excellent work in preaching content to the poor and unfortunate, for there was then really no escape from their misery. These teachings have now been dropped, or fall on leaden ears. The new doctrine, that no man should be content, that all should try to rise, has been converted into a proposition that all *can* rise, and that if anybody does not rise, it is because somebody is keeping him down. Herein lies the source of all our woes. Anybody who goes about spreading this view is really an accessory before the fact to all anarchist crimes. The true rôle for the social reformer in our day is to comfort and help the weak-hearted, to raise up those who fall, to strengthen those who stand, and to open to all a fair field, and to try to keep down the world's supply of envy, hatred, and malice.

OUR SAMOAN TROUBLE.

MR. GRESHAM has sent in to the President a report on the Samoan matters which ought to be read by all persons who feel their loyalty to old-fashioned American principles growing weak. The opening paragraph ought to be hung up in every newspaper office in the country, and over the bed of every young Jingo who thinks foreign meddling a sign of "good Americanism." Here it is:

"It is in our relations to Samoa that we have made the first departure from our traditional and well-established policy of avoiding entangling alliances with foreign powers in relation to objects remote from this hemisphere. Like all other human transactions, the wisdom of that departure must be tested by its fruits. If the departure was justified, there must be some evidence of detriment suffered before its adoption, or of advantage since gained, to demonstrate the fact. If no such evidence can be found, we are confronted with the serious responsibility of having, without sufficient grounds, imperilled a policy which is not only coeval with our government, but to which may, in great measure, be ascribed the peace, the prosperity, and the moral influence of the United States. Every nation, and especially every strong nation, must sometimes be conscious of an impulse to rush into difficulties that do not concern it, except in a highly imaginary way. To restrain the indulgence of such a propensity is not only the part of wisdom, but a duty we owe to the world as an example of the strength, the moderation, and the beneficence of popular government."

We first went to Samoa in 1872, in the person of an unknown German adventurer named Steinberger, whom Gen. Grant had the good nature to make "special agent or commissioner." Steinberger, without any authority, promised the islanders the protection of the United States, but he was so troublesome and foolish that the American consul expelled him from the island, and he left on a British man-of-war. But he had, before he left, made a secret agreement with a German trading-house to throw the commerce of the island into their hands as far as he could, for a consideration.

In 1877 one set of Samoan chiefs sent an ambassador to Washington to make a treaty with us, while another set went to Fiji the same year to solicit the protection of Great Britain. But we refused to make any treaty. The following year, however, Samoa having got into the heads of our politicians, we did conclude a treaty giving us the port of Pago-Pago as a coaling-station, in return for which we were to use our offices as a mediator in case Samoa got into trouble with any European power. In 1879 the Germans, then in the height of their colonizing fever, also made a treaty by which they obtained a naval station in the harbor of Saluafata. The same year Great Britain made another treaty, stipulating that she also should have a naval station and coaling-depot. Then there were five years of quiet. Everybody had his coaling-station, and was happy. But in 1885 the German consul-general, Dr. Stuebel, got out of patience and seized all the land in the municipality of Apia as security for the good behavior of the islanders towards German interests. The American consul, not to be outdone, hoisted the American flag and proclaimed a protectorate. Our Government promptly disavowed him, and suggested a conference of the three powers to consider the situation.

A conference was accordingly held in Washington in June and July, 1887, but could not agree on anything and adjourned till the fall. In the interval the Germans demanded satisfaction from the Samoan King Malietoa, and declared war

against him, and defeated him, and set up another King with a German adviser. We thought this was sharp practice, and sent a naval squadron to Samoa to look after American interests, whatever they were, and the squadron was destroyed in 1889 by a hurricane. In that year a treaty was concluded creating "an autonomous" government for Samoa and guaranteeing its neutrality. It was a beautiful system, but somehow it was not quite autonomous. There was a "supreme court," but the natives defied its writs, and refused to obey the new autonomous King. They became turbulent, and in 1893 broke out into open rebellion, and the autonomy came speedily to an end. The treaty powers put down the rebellion and deported twelve chiefs. The chief justice of the Supreme Court then resigned. So did the president of the Municipal Council of Apia. An American named Hyde was appointed chief justice in November last, but just as he reached his post he found that the laws were silent, as the city was full of warriors repelling attacks on the King. In the spring open war broke out, and several battles were fought around Apia on the autonomous plan. The Government had, on the whole, the best of it, but was nevertheless compelled to call on the foreign men-of-war again. These men-of-war now supply all the peace and security there is in the islands.

When we remember that these islands are 4,000 miles from our shores, and that our trade with them amounts to almost nothing, that we should never have thought of going near them for any purpose had not a foreign adventurer got himself appointed our commissioner under our free-and-easy diplomatic system for his own personal gain, there are few who will read Secretary Gresham's closing paragraph without a sigh of acquiescence:

"Soberly surveying the history of our relations with Samoa, we well may inquire what we have gained by our departure from our established policy beyond the expenses, the responsibilities, and the entanglements that have so far been its only fruits. One of the greatest difficulties in dealing with matters that lie at a distance is the fact that the imagination is no longer restrained by the contemplation of objects in their real proportions. Our experience in the case of Samoa serves to show that, for our usual exemption from the consequences of this infirmity, we are indebted to the wise policy that had previously preserved us from such engagements as those embodied in the general act of Berlin, which, besides involving us in an entangling alliance, has utterly failed to correct, if indeed it has not aggravated, the very evils which it was designed to prevent."

BLACKMAIL GOVERNMENT.

Is there any branch of business in this city, honest or criminal, which does not pay tribute money to Tammany Hall through the police? This question arises naturally in the mind of every reader of the testimony produced daily by the Lexow committee, and especially after testimony covering so wide a range as that of last week. It had been shown heretofore that vice and crime pay heavily for immunity; that applicants for the police-force and candidates for promotion to the higher ranks of the force must pay bribe money to somebody before their ambitions are gratified; that all liquor-saloons, licensed and unlicensed, pay tribute; and that professional swindlers share the profits of their business with the police and conduct it sometimes in partnership with a police justice. On Thursday it was shown that all steamships landing cargoes at this port have to pay blackmail at every stage of the business to every official—police, dock, custom-house, and other—that has anything to do with it; that all storekeepers who desire to use the sidewalks in front of their stores in displaying or handling their goods pay regular tribute to the police of about $25 a year, and that a more or less scientifically constructed tariff runs from the largest stores down to the push-cart vendor in the street, whose tribute is $3 a week.

A very significant bit of testimony was adduced also from a member of the police force, who admitted that he gave ten dollars to his sergeant—"just handed it to him"—on one occasion, merely remarking to him that it was a present. He had never given him any money before or since, and gave it to him on this occasion because he was friendly to him. The amount was just one-half of what the policeman had received from the steamship companies on his beat in the way of "extra compensation." It will be the natural inference of every intelligent person that this bit of testimony shows pretty clearly what the ratio of division is between the patrolmen and their superior officers for revenue derived from this source.

Another significant bit of testimony was that of a produce-dealer, who said he paid $25 a year for sidewalk privileges, and put the money in an envelope and left it at his neighbor's store to be called for. Similar caution was observed by the policeman who, according to another witness, wished to levy an extra tribute upon a push-cart cutlery dealer. Taking up a pair of scissors he asked, "Are they any good?" And being told that they were good enough to sell, he added: "Leave a pair for me with the Italian across the street." Everything in the way of "business" by the police is done in this cautious manner—either through envelopes, or a neighbor, or an Italian across the way. The force is known, according to the testimony of one of its members, as the "envelope gang," and we doubt if anything quite like it has ever existed in any other civilized community.

It would be inaccurate to say that these revelations are causing general surprise. You cannot surprise a community by disclosing facts which have been matters of common knowledge or experience with the larger part of its members for a quarter of a century. No citizen who has paid blackmail in one form is surprised to learn that another citizen has paid it in another form. A merely casual glance at the Dock Department on Thursday revealed the fact that steamship companies are blackmailed by every official in that department who has any power over them. If this was brought out at the first touch of the exploring probe, what would be the result if the department were to be thoroughly investigated? What would be the result in any other department under like treatment? The committee has no power to go into other departments than those connected with the police, and if it were to sit continuously for six months, it would have more than it could do to exhaust that restricted field; but we can see now what would have happened had Boss Platt permitted, in January last, the appointment of a joint committee with full powers to investigate the whole Tammany government. Mr. Croker's trip to Europe would have been hastened perceptibly by such a concession, and it is not improbable that a large collection of other Tammany magnates would have accompanied him.

Shall we be able to get at the sharers in the profits of this government by blackmail who stand behind and above the police and the other departments? Does anybody suppose that the enormous revenues from this government, running from the push-cart at $3 a week to the brothel at $500 "initiation fee" and $50 a month, with a sliding scale of rates upon every variety of reputable business, all stopped in the hands of their collectors? Did no shares pass beyond the police captains and commissioners to the political powers above them? We shall doubtless have light upon these questions in due time. Mr. Goff is clearly master of his case, and has it laid out on scientific lines. There are complaints in Tammany quarters that he is not giving the accused officials sufficient opportunity to be heard; but we discover no demands in these quarters for Judge Divver to take the stand and vindicate his character. Mr. Goff is ready to examine him at any time, and will be ready, we doubt not, to give all other Tammany statesmen and powers equal opportunity to be heard. The end is not yet, but the shame of the city is already established.

THE COURT OF CATHERINE II.

PARIS, June 7, 1894.

M. WALISZEWSKI has given us a most interesting volume on Catherine II. of Russia; it seemed as if he had exhausted his subject. His volume, which bore the title of 'Roman d'une Impératrice,' had truly all the interest of a novel. On the whole, with all her defects, one may even say with all her vices, Catherine appeared in it as a really great sovereign, and we felt that she had been not unjustly called "la

grande Catherine." She was a very exceptional character, and, as M. Waliszewski justly remarks, of all the things which constituted her personal greatness, her prestige, her charm, nothing came to her by inheritance; she conquered or created everything; she formed all the men who became her ministers, her favorites. M. Waliszewski has thought it necessary to add a new volume to his work. Under the title 'Autour d'un Trône,' he gives us the most abundant details on the fellow-workers of Catherine, her friends and her favorites. The subject was a vast one, though, in many respects, the new volume is somewhat of a repetition or an echo of the first. Catherine fills again the whole volume, but it seems to us that a sort of transformation has taken place in the mind of M. Waliszewski. In his 'Roman d'une Impératrice,' though there are many criticisms, admiration is, so to speak, the keynote, the sequel, 'Autour d'un Trône,' reads more like a pamphlet, as a perpetual satire, than as a history. We find in almost every line a certain sort of bitterness and hostility.

Before writing his new work, M. Waliszewski thought it necessary to visit all the places where Catherine spent her eventful life. He was in hopes of finding some of those expressive traits which have more of life in them than the written documents.

"Alas! what I found," he says, "was the great void of things which have gone. In the palaces of Saint Petersburg, even at the Hermitage, nothing, or almost nothing; burnt under the reign of Nicholas, Rastrelli's magnificent edifices have been completely rebuilt. Nothing at Tsarskoe; the pompous or graceful decoration which charmed Ségur is gone, gone also the familiar frame where, under the kindly eye of the goddess vaunted by Voltaire, the widow of the Prince de Ligne, the wit of Potemkin answered the somewhat coarse buffoonery of Narishkin. Peter the Great has been more fortunate: we still find, on the icy shore which was fecundated by his genius, his little wooden house, with its heroic poverty and its suggestive furniture."

It is well known that Catherine, the "Semiramis of the North," was a great patron of the French philosophers. It was worth while to study with some detail what M. Waliszewski calls the intellectual court of Catherine. Voltaire wrote in one of his poems:

"C'est du Nord aujourd'hui que nous vient la lumière."

In a letter to Diderot he says: "It is France which persecutes the philosophers, and the Scythians who favor them." Grimm writes to Catherine: "Madam, after the kindness which your Majesty has lavished on one of the most celebrated philosophers of France, all those who cultivate letters are regarded as your subjects."

It is interesting to know exactly the nature of Catherine's relations with the philosophical school. What was her aim? what was the point of contact between the philosophers and the absolute sovereign of a distant and almost barbarous country? Extremes meet, says the proverb. Can we find an application of it in the sentiment which drew the philosophers towards Catherine? They knew well that this woman ruled over thirty millions of subjects, twenty millions of whom did not possess even their souls, which were transmissible by sale, worth ten rubles apiece on the average—mere muzhiks, covered with beasts' furs, hardly men. Catherine knew that the works of the philosophers, which she delighted in reading, could produce no effect in her vast empire. Since her time, some elements of Occidental culture have penetrated Russia, and Russia, on her side, has produced an original literature; she has shown that she can think for herself. Nevertheless, she remains to a great extent closed to European influences: the two surfaces have been brought in contact; the bodies are still impenetrable to each other. The present sometimes helps us to understand the past, if the past helps us to understand the present. Have we not, in our day, heard the Marseillaise, the great song of the Revolution, sung in St. Petersburg before the Czar? "Thermidor," a play of Sardou's, which had been interdicted in Paris under the Third Republic, could, without any danger, be played in St. Petersburg. We hear a great deal nowadays in Paris of the Russian alliance, of the "âme Russe"; we are supposed to be in communion with this Russian soul, but do we really know what it is? Is it enough to have read Turgeneff and Tolstoi? And did the French philosophers know what the Russian soul was under the reign of their beloved Semiramis of the North?

The relation between Voltaire and Catherine began in 1764. Did Voltaire know that, since 1716, a series of ukases had rendered auricular confession obligatory on all orthodox Russians, and that Catherine herself reprimanded severely Gen. Tchitcherin, Governor of Tobolsk, who was not prompt enough in taking note of those who did not obey the ukases? It suited Voltaire to use the name of Catherine, and it suited her to use his pen. When she was inoculated, Voltaire announced it to the world as a proof of her courage and of her superiority to all prejudices; when Voltaire opened a subscription for the family of Sirven, Catherine allowed him to put her on his list. On one point they saw exactly alike: Voltaire wished to subject the Church to the State, and so did Catherine. In 1771 she called the attention of Europe to the manner in which the Ottoman Porte treated millions of Christians; she sent 1,000 ducats to Voltaire, and asked him to find a young writer who could put together a pamphlet against the Turks. Voltaire wrote it himself ('Le Tocsin des Rois').

There was no end to the compliments they sent to each other; but Voltaire bore away the palm. Europe, he says, admires Catherine, Asia is astounded; if Asia and Europe had any common sense, she would rule over the whole world. She is "Notre Dame de Saint-Pétersbourg," very superior to the Polish virgin of Czenstockowa; she is the deity of the north—"Te Catharinam laudamus, te Dominam confitemur." She knows more than all the philosophers; her big diamond is bigger than the Regent's; her feet are whiter than the snows of Russia, etc., etc. I must confess that I am surprised that M. Waliszewski has not seen that Voltaire was a singular sort of a courtier; that he mixes too much irony and humor in his compliments to be considered an ordinary courtier. Catherine was not his dupe, and he was not the dupe of Catherine. In his correspondence with his friends Voltaire calls Catherine merely *la belle Catean*, or simply *Catean*. To Mme. du Deffand he says: "I know that people reproach her with some little trifles with regard to her husband, but such affairs are family matters that don't concern me; sometimes it is well that people should have grave defects to repair: they have to make greater efforts to force the admiration of men." And Mme. du Deffand, writing to Voltaire about Catherine, who "preached even among her neighbors with an army of 50,000 missionaries, well armed from head to foot," said to him, "Never see your Catherine except through the telescope of your imagination. Leave between her and yourself the distance of space in lieu of the distance of time."

The relations between Catherine and Voltaire were happier than her relations with Diderot. Voltaire often spoke of going to Russia, but he always left the "distance of space" between himself and the Empress. Diderot was not so fortunate. She had invited the famous philosopher to go to St. Petersburg and to continue there the Encyclopædia, which a royal decree had stopped after the first seven volumes. She had bought in 1765 the library of Diderot. He left for St. Petersburg with M. Narishkin, and was at first very well received. Catherine found him a little familiar, and she writes to Mme. Geoffrin that she is obliged to put a table between him and herself, as his mimicry is too expressive. "He takes her hands," writes Grimm, who was at the same moment at St. Petersburg, "he shakes her arm, he strikes on the table." He soon finds a wall rising between himself and Catherine. He asks questions which she refuses to answer; he is very anxious to show that he is no common courtier, but she reminds him at times that she is a sovereign.

One day he was declaiming against the courtiers and their flattery, and said that a special corner ought to be reserved for them in hell. She interrupts him: "Will you tell me what people say in Paris about the death of my husband?" He is embarrassed and speaks of the hard duties sometimes imposed on persons who, by their position, have a great mission. She stops him again: "It seems to me that you are taking the road, if not to hell, at least to purgatory." Diderot found, after a while, that he merely amused Catherine, but that she would not give him any real work to do. He had not made himself popular in society. After five months spent in idle conversations, he went away. He wrote to his wife that, the day before his departure, her Imperial Majesty "sent to me three bags containing a thousand rubles each. . . . If I deduct from it the value of an enamel and of two pictures which I gave the Empress, the expenses of my journey back, and the presents which I must make to Narishkin, . . . there will be left for us five or six thousand francs—perhaps a little less." Diderot forgets to tell his wife that, during his stay in St. Petersburg, he often received presents from the Empress, and that she paid all his expenses. In 1779 she sent some money to him through Grimm. As he was asthmatic, she paid the rent of a larger apartment for him in the Rue Richelieu on the first floor.

D'Alembert was among those who were honored with the advances of Catherine; he was more prudent and reserved than Diderot; his mind was less volatile. The Empress invited him to come to Russia, with a pension of 10,000 rubles, to finish there the Encyclopædia. In return she asked him to teach the Grand Duke mathematics. D'Alembert answered politely: "If it had been only a question of making the Prince a tolerable geometer, an ordinary writer, perhaps even a mediocre philosopher, I should not have despaired of succeeding; but there is a great interval between a geometer, a writer, even a philosopher, and a great king; and nobody, madam, knows it and proves it better than you." Catherine was somewhat offended; their relations became strained and finally ended completely. Catherine was never in correspondence with Rousseau. She forbade, in 1760, the sale of 'Émile,' but there were at the time only three copies of the book in Russia. She afterwards offered one of her many establishments to Rousseau as an asylum

against persecution; Rousseau hardly took notice of the offer, and Catherine was offended. She was becoming more and more hostile to the philosophical school. On the 11th of February, 1794, she writes to Grimm: "You were quite right never to have been willing to be counted among the *illuminés*, the philosophers, for all this, as experience shows, ends only in destruction." The French Revolution had been a lesson to her, and Rousseau, the idol of the Jacobins, became her *bête noire*.

I have been able to give only a very cursory view of one of the parts of Waliszewski's new work. The other parts are no less interesting. The author is a good hater, which may perhaps be permitted to a Pole. He is often one-sided and intolerant; he has built his statue of Catherine, and, after having built, he stones it; but it must be confessed that his stones are heavy and well directed.

THE FALISCAN MUSEUM AT ROME.—II.

ROME, April, 1894.

THE first chamber of the museum is devoted to the graves which are attributed to the centuries prior to the sixth B. C., and conjectured to go back to the twelfth, and in this there occur very early the evidences of commerce with the East, in the shape of bronze implements of Phœnician types, and, what is far more characteristic and interesting in many ways, the constant habit of copying, in clay, utensils in bronze of foreign provenance, of which a few are found in the collection. The local ceramics were thus at once distinguished from all others found in Italy or elsewhere (as may be seen by the contents of one of the tombs, lately added to the vases in the British Museum), and are remarkable for a curious dexterity in copying bronze forms, and for a quite unique type of general decoration, in which there was finally a genuine evolution of the most florid type of ornamentation. To the well-tomb had succeeded at an early date the trench and chamber forms in a gradual development, but always, even in the simplest type, indicative of the introduction of traditions and ceremonials of an entirely different character from the Italic, and equally different from the distinctive Etruscan. There are the signs of increasing wealth in richly decorated arms, jewelry, and remains of chariot and harness of the horses, all of finest Oriental or Greek workmanship, bronze vases, Cypriote and Corinthian ceramics, and imitations of them, etc., etc.; and there occurs in one of the later tombs of this chamber, in the midst of the most elaborate Faliscan ceramics, a single kylix of pure Attic work, associated with local productions which we must put down for the seventh century, and which we can explain only as due to a second and later interment in the same tomb.

The second chamber introduces us at once into a world of Attic derivation. It is supposed to go back to the beginning of the sixth century, and some of the archaic vases with black designs on the red ground are among the finest in existence. To them succeed later styles of decorative design, and in the latest tombs of the series begin to appear vases of a new manner, borrowed from the Greek, and mingled with the imported ceramics, just as in the latest tombs of the preceding centuries the vases of Cypriote and other insular and the so-called Corinthian pottery had found their way among the Italic. Archaic Greek vases are found carefully mended, as if regarded as of high value and apparently for funereal uses. The Greek ware is accompanied by a concurrent supply of local manufacture, in black earth, considered by the explorers as intended for accompaniments in the grave, the service of the dead. The quality of the art seems to deteriorate with time, and while in the earlier period, and during the evident constant intercourse with continental Greece, the reverence for the dead was shown by the exquisite quality of the offerings to their shades, as time goes on and the Faliscan material assumes greater and still greater predominance, the greater part of the pottery which the rites assured to the manes becomes of a gross and wretchedly commonplace character, so that one is tempted to conclude that art was disappearing from Faleria before it fell. One of those singular cases of antique dentistry, of which several are known, occurs in one of the graves, viz., a skull with gold-work evidently having once supported some kind of substitute for the original teeth. Vases of the most exquisite Greek bronze, perfect in form and marvellous in a patina-like turquoise, occur in this part of the series; and the central showcase, which in each of the rooms contains the *chefs-d'œuvre* of the period, has a few vases of the very best style of Greek vase painting. One of these, a rhyton in the form of astragal, is excelled by nothing that I have ever seen of its kind. But the grosser Faliscan ware gains on the imported, and when we enter the next room, which is supposed to show the arts in Faleria in the fourth century and down to the capture and destruction of the city and the removal of the inhabitants, Greek art disappears entirely as if a wall had risen between the mother-land and the colony. Only a few bronze vases of evident Greek workmanship suggest Athens, and these may have been of local production. The ceramics are utterly barbarous for the far greater part, but a few have been found which lead to the inevitable conclusion that the vases given to the grave were manufactured for the grave, in merely formal obedience to the rites of burial which prescribed such an accompaniment.

The few really fine Faliscan vases are of a type not anywhere else discovered, and present an art of an unsuspected style, introducing a new element of design, in which I almost am disposed to find a prophecy of the Italian Renaissance. The Greek traditions are preserved, and an Olympian assembly gives us the usual divinities with their usual attributes; but the design has a daintier note, a delicacy of touch equal to that of the pre-Periclean painting, with a sensuous warmth of style which in a certain measure suggests the great medals of Syracuse in their Arethusa heads. The severity of the Greek work of the best time gives way to a flowing line, an enfolding of the draperies, and a sense of physical beauty, which I do not remember in any pure Attic work of any epoch—less heroic but more caressing. The suggestion of detail in drapery, in form, in decoration, is carried to the extreme, and the grace of line is studied with a care as great as is consistent with the freedom of it. A large and extremely important vase, quite unique in its way, has fortunately been preserved entire and with but little injury to its painting, and was evidently the gift to death of the bereaved partner of some tender Faliscan romance. It bears traces of polychromy, and, the main design having been drawn in black line on the red ground, the flesh and parts of the accessories have been overlaid in white enamel, on which the most delicate portions of the design have been finely drawn in black. On one side is an allegory of the dawn, Aurora driving forth with Eos in a chariot drawn by four horses, like those in the best Sicilian medals. In the air above are seen two swans, emblems of light, and the steeds are preceded by the winged genius of light, and on the neck of the vase above is a splendidly drawn bull giving battle to one of a pair of griffins, another being behind him for the symmetry of design. Over this is a border of lotus ornament. On the reverse there is the rape of Proserpina in chief, or death carrying away a young bride; her paraphernalia had been held by an attendant, from whose horror-paralyzed hands it is falling as the scene trembles to dissolution. Birds of night fly away, and the attitude of the attendant maiden is full of dismay. In the space above, in place of the bull giving battle to the symbols of mystery and ravage, is a stag, dragged down in a death agony by the victorious griffins. Overhead, in the place of the lotus border under the lip of the other side, is a line of fillet ornament, emblem of sacrifice. There is an ensemble of design with every part in a harmony of significance, a combination of such qualities of art as are most fitting to that branch of it to which it is applied, such as I do not know in Greek ceramics elsewhere.

A large and very rich tomb in the end of the series, while it shows evidence of the wealth and luxury of the epoch, also introduces still other hitherto unknown elements of decoration into the Faliscan ceramics—an unprecedented quantity of vases of large dimensions, originally silvered and ornamented with delicate designs in relief and polychrome applied to the completed vase, with modelled anses and terminals of fantastic figures of animals; a motive clearly suggested by similar vessels in metal. In the last room of the suite is a little collection of terracotta statuary, found in the ruins of one of the temples, of unusually large dimensions and of pure Greek art of the fourth century B. C., so fine, so masterly that one imagines that the Faliscans must have sent to Athens in its best days for a sculptor, and that Athens had sent the best she could spare. Marble in Italy not being then known, the statues of the temples were necessarily in clay, which has kept for us the manner of the artist much better than the marble was likely to do. But the art can be identified with no continental Greek school, so far as we know, and if Greek, otherwise than as Faliscan, it must have been of Sicily, the liaison being rather with Syracuse than the Acropolis; but probably it was purely Faliscan. The paucity of illustrative material is such that we can only conjecture, and with conjectures that confuse each other continually.

There are innumerable problems which present themselves for solution by the archæologist in this museum, and which must wait for more material from the surrounding cities. Meanwhile, incidental excavations at Alatri, at Civita Lavinia (carried on by Lord Saville, the predecessor of Lord Dufferin at the British Embassy to Italy), at Antemnæ, and other localities, show that the traditions of Faleria had extended through all the valley of the Tiber south of the Ciminians, and at Alatri were found the remains of a temple whose decorative parts of terracotta so closely correspond with those found at Faleria that there can be no doubt that the art was identical. A restoration of the temple, carried out in the grounds adjoining the Villa Julia, and based for the most part on documents of irrefragable authority, gives a new and lucid conception of the temple architecture, showing at the same time that what we have hitherto given on this head to the Etruscans, must be re-

claimed for Greek art, as it has been in the case of the ceramics and the civic condition of Faleria. The dominion, not only as to its efficacy, but as to its extent, of the Raseni is singularly curtailed in the record we must compile from these discoveries.

One of the minor problems offered by the early burials is the occurrence of sarcophagi made from tree-trunks, split open and hollowed out, at Faleria frequently, and also at Gabii. The fact that in every case the inhumation was of a woman has induced Count Cozza to conclude that a custom existed of incineration for the males and inhumation for the females. These sarcophagi are found in tombs which cannot be placed later than the seventh century, and their occurrence in two cemeteries so far removed locally, and, as generally believed, even ethnically, from each other, suggests a confirmation of the tradition given by various ancient authors, that the Faliscans and the Curetes were a kindred people; the patroness of Faleria, Hera of the argive colonist, becoming Juno Curetes. But whether there was an identity or a cousinship, there is not yet evidence enough to determine. Excavations at Gabii, where nothing has been done except incidentally, might show us new relations; but, accepting the hypothesis of Cozza as to the sex distinction, I am inclined to suggest that the inhumations to be considered were probably those of priestesses rather than those accorded to all of the sex. Was there at Faleria a colony of pure Latin stock, or had a burial custom gone from Faleria to Gabii or vice versa? Was this a question of rite or of race? And if of race, what was the relation of the Gabinii (Gabii being also the seat of a famous temple of Juno) to the Aequi, of which nation the Curetes were a clan? The probability seems to me to be that the civilization which we know to have been established at Faleria (and of which the ancient tradition assigns the beginnings to the epoch of the Trojan disturbances, or earlier than that break-up, whatever it might have been), spread through all the country eastward and southward as far as the geological barriers, thus including the greater part of Latium and entering as an important element into the subsequent development of Roman civilization. But without claiming that this is indisputable, I consider that one thing is definitely established by the Faliscan and allied discoveries, viz., that the Etruscans, or Raseni, stood for little or nothing in the development of this phase of Italian (Italic) development, and that the so-called Etruscan art was only a barbaric adaptation of Greek traditions, so far as it could properly be called art. What lies beyond in archæological investigation through this opened door is of such splendid suggestion that we can only bitterly regret that the financial prostration of Italy should have compelled the suspension of all researches, including these, which have thrown such a wonderful light on the history of civilization in the few years past.

W. J. Stillman.

Correspondence.

THE WASHINGTON PEDIGREE.

To the Editor of The Nation:

Sir: For the past three years I have been much interested in the Washington pedigree as it has been developed in the columns of the *Nation*, and I have lately found among "Marriage Licenses granted by the Bishop of London; Chester" (Harleian Society Publications, vols. 25, 26) something which I think throws light on the second sister of John and Laurence Washington, the emigrants:

"Feb. 27, 1662. George Talbot of St. Giles in the Fields, gent. bachelor, aged 26; father dead, and Margaret Washington, of same, aged 24—parents both dead. At St. Giles in the Fields."

This date fixes her birth as in 1638, which seems probable from the Waters pedigree—her preceding sister, Elizabeth, having been born in 1636, and William, the brother who comes after her, in 1641.

Katharine C. Dorsey.

No. 2025 N Street, Washington, D. C.

"NOTCH."

To the Editor of The Nation:

Sir: In the 'Century Dictionary,' under Notch, it is stated that "the word is apparently limited in use to the region of the White Mountains in New Hampshire and the Adirondacks, and has nearly the same meaning as *gap* in the central parts of the Appalachian range." To a similar effect writes Prof. J. D. Whitney, in his 'Names and Places' (1888): "In the White Mountains of New England the passes are occasionally called notches, a local use of the word peculiar to this region and that adjacent to it" (p. 135); though, in a work published in the following year, Prof. Whitney extends the use of the word to the Adirondacks.

As the word is used far more extensively than would appear probable from the above statements, it may be worth while to indicate what evidence the writer has collected bearing on the distribution and on the history of *Notch*. In the paragraphs which immediately succeed, the dates within brackets give the earliest known reference, either in print or on maps, to the Notch in question.

In New Hampshire, the State where the word has the greatest currency, there are the following Notches: Carrigain, Carter, Crawford or White Mountain (1784), Dixville (1841), Franconia (1839), Kinsman, Mad River, New Zealand, Perkins (1882), Pinkham (1784), Sandwich (1859), and Willey. All of these, except Dixville Notch, are within the limits of the White Mountain region.

In western Maine, in the near neighborhood of the White Mountains, are Evans, Grafton or Bear River (1858), and Miles (1858) Notches, while there is a Notch in Garland, Penobscot County (1859), and I am also informed that the word "has been used for years" as applied to a deep valley on the Island of Mt. Desert.

In Vermont are Smuggler's Notch (1886), at the base of Mt. Mansfield, and Willoughby Notch (1884), in Westmore.

In Massachusetts there are two Notches—one on a slope of Greylock, in Adams (1829), and the other between Mt. Holyoke and Mt. Norwottock (1863), traversed by the road from Amherst to South Hadley and Granby. There is also an early reference, in Douglass's 'Summary' (1749), to "a Notch in Bridgewater." The place alluded to was later in North Bridgewater and is now in Brockton; but as the hills in this part of Massachusetts nowhere exceed 200 feet in height, and as no reference to a Notch can be found in the histories of those towns, it is difficult to understand why Douglass should have used the word in speaking of such a comparatively level country.

In the Adirondacks are Wilmington Notch (1869) and Ausable Notch (1888).

In the Catskills there seem to be many Notches, but I have been unable to ascertain for how long a time the word has there been in use.

Finally, in Bolton Notch (Bolton, Tolland County), Connecticut, we have a gap or pass which has been called a Notch for over a century and three-quarters.

So far, then, from the word being peculiar to any one region, it occurs in no less than five of the New England States, and in two different sections of New York State.

While the examples which follow do not illustrate the word completely, they perhaps do so sufficiently. As applied to the famous pass in the White Hills, we can trace the word almost to the beginning. Whether, as has been frequently stated, that pass was known to the Indians, or whether it was discovered for the first time by Nash in 1771, at all events it then first became of any practical value to the white men. The word Notch, as applied to this pass, is found in writings as early as 1784, and also on a map published in London the same year.

"Dined at Coventry. Lodg'd with Col. Quincey at Olcot's, about ⅓ way between the Notch of the Mountain and Hartford." 1718, S. Sewall, *Diary*, 15 Sept. (1882), iii., 195.

"From this Station to a Notch in *Bridgewater* E. 18 d. N. are 23 Miles. . . . Its Southerly Line is from *Conohasset* Rocks to the Notch in Bridgewater 15 Miles." 1749, W. Douglass, *Summary*, i., 401,424.

"We took our leave of this place, . . . and about 11¼ arrived at the *Western Notch*, as it is called—a narrow defile between the Mountains." 1784, J. Belknap, *Belknap Papers* (1877), ii., 182.

"In my way to East Hartford I passed through Bolton. . . . In this town is what is usually called the notch of Hartford Mountains." 1787, M. Cutler, *Life, Journals and Corr.* (1888), i., 209.

"The head of Saco River, is in the White mountains, at the western pass, commonly called the notch." 1792, J. Belknap, *History of New-Hampshire*, iii., 57.

"Thence the line ran, a little north of west, through Pomfret, Ashford, Willington, and Tolland, to Mo-she-nup-suck, the notch of the mountain, now known to be the Notch in Bolton Mountain." 1797, B. Trumbull, *History of Conn.*, i., 444

"Proceeded on foot to New River and the Meadow, in the east [Pinkham] Notch, about three miles." 1804, M. Cutler, *Life, Journals and Corr.* (1888), i., 111.

"The Notch of the White Mountains is a phrase, appropriated to a very narrow defile, extending two miles in length between two huge cliffs, apparently rent asunder by some vast convulsion of nature. This convulsion was, in my own view, unquestionably that of the deluge." 1821, T. Dwight, *Travels*, ii., 147.

"The two ridges embraced within the line of Adams converge towards the south. . . . The tapering valley between them, called 'the Notch,' comprises several dairy farms." 1829, J. W. Yeomans, in *History of Berkshire County*, Mass., 428.

"This mountain-pass—most inappropriately, as it seems to me, called the 'Notch,' as conveying the idea of something cut or indented by art, whereas here, the grandeur of nature alone is seen." 1841, J. S. Buckingham, *America*, iii., 216.

"The scene became more grand as we entered the defile called the Notch." 1845, Sir C. Lyell, *Second Visit to the U. S.* (1849) i., 63.

"The Pass, so called, is only an old-fashioned notch between the mountains." 1847, C. Lanman, *Adventures in the Wilds of America* (1856) i., 226.

"Passing down the Chemung and Susquehanna in canoes, they landed at a place called Three Islands, struck through the wilderness to a gap or 'notch' of the mountains, by which they entered the Valley of Wyoming." 1856, W. Irving, *Life of Washington* (1865), iii., 433.

"We reached the gap, which was like a deep notch cut into the mountain-ridge." 1847, F. Parkman, *Oregon Trail* (1872), 180.

"There are two deep valleys across the mountain, formerly called cracks and notches, one . . . where is the road between Amherst and South Hadley and Granby." 1863, S. Judd, *History of Hadley*, Mass., 436.

"I found myself entering the 'Whiteface Clove' or 'Wilmington Notch.'" 1869, A. B. Street, *Indian Pass*, 136.

"Wilmington Pass is a natural gateway to North Elba from the north, a notch cut out of the mountains." 1886, S. R. Stoddard, *Adirondacks*, 72.

"The Notch may be taken as a good specimen of a snowless mountain pass: a deep and narrow gorge or chasm between two opposite precipitous cliffs." 1887, Grant Allen, in *Longmans' Magazine*, ix., 292.

If these examples furnish an adequate account of the word, we apparently have in Notch not only a genuine Americanism, but also, in its origin at least, a genuine Yankeeism. Though known in the New England States as early as 1718, it does not appear to have been applied locally elsewhere until within the last thirty years or so; and even now its use by other than New England writers seems to be sparing. Finally, it may be worth noting that, though there is perhaps not in New England a pass which is locally called a gap, yet in New English literature the words gap and notch are used interchangeably.

ALBERT MATTHEWS.

BOSTON, June, 1894.

["Great Notch" is the name applied to the wagon-road pass through Orange Mountain, New Jersey, not far from the northerly end at Paterson, though it is really but a small cleft or clove.—ED. NATION.]

Notes.

'POOR FOLK,' translated from the Russian of F. Dostoyevsky by Lena Milman, will be published directly by Roberts Bros., who also have in press 'A Child of the Age,' by Francis Adams.

D. Appleton & Co. announce 'The Purple Light of Love,' by Henry Goelet McVickar, and 'Mrs. Limber's Raffle,' by William Allen Butler.

G. P. Putnam's Sons have nearly ready 'Miss Hurd: An Enigma,' by Anna Katharine Green, and students' editions of Irving's 'Tales of a Traveller,' 'Sketch-Book,' and 'Alhambra,' edited by William Lyon Phelps, instructor in English literature at Yale.

An improved and enlarged edition of the 'Handbook for Graduate Students,' issued last year by the Graduate Club of Harvard, may now be ordered of C. A. Duniway, Secretary, No. 54 Langdon Street, Cambridge, the price being fixed at ten cents. It is the only compact source of information in regard to the graduate courses of eighteen principal universities, their frequenting, degrees, fees, fellowships, etc., with parallel exhibits of corresponding courses, and scholastic records of the several instructors.

Mr. Joseph Landon's 'Principles and Practice of Teaching and Class Management' (Macmillan) is the outcome of nearly a quarter of a century's experience in an English training college. Its plan comprehends nearly all the topics taught in American grammar schools, with about 150 pages of matter on methods. To the teacher in quest of something fresh, the first impression will be disappointing. The author believes in the good old-fashioned teaching of English grammar, apparently never heard of child study or of vertical script, and has nothing to say concerning hygiene or physical training. The Grube method in arithmetic is well explained, and so is Mulhauser's method in writing, as if commendable novelties. The place of elementary science is discussed, and the claims of botany and elementary physics are recognized. The book is one of detail and does not readily lend itself to general treatment. Teachers will at once compare it with Fitch's well-known lectures on teaching, to the advantage of Mr. Landon, on the score of comprehensiveness and practical common sense. The volume is admirably indexed, well printed in four sizes of type, abounds in illustration, and, on the whole, it would be hard to find one of the same compass more helpful to a young teacher.

Prof. Charles F. Kroeh has followed up his method for learning French, which has met with a very favorable reception, with 'The Living Method for Learning to Think in Spanish' and 'The Living Method for Learning to Think in German,' both published by the author at Hoboken, N. J. It can be said of these books that, with their aid, a person of ordinary ability can by himself master the rudiments of these languages, and the foundation laid will be a broad and firm one. The aim is thoroughly practical, fitting the learner to enter into every-day speech, leaving the poets and the classical prose-writers to be encountered afterwards. Proceeding from the simplest statements to complex expressions, the author gives models for varying these phrases, utilizing all the forms previously introduced. This is no "six-weeks" method, but presupposes industry on the part of the student and indefatigable persistence in practice.

The name of Arthur Hugh Clough is still too little familiar in this country, where Prof. Norton's tiny "blue and gold" edition of a part of his poetic works (1862) has heretofore been the only popularizing agency. The new selections from his poems just added by Macmillan & Co. to their Golden Treasury Series comprise less matter than the foregoing, but also some fresh, and the print of the pretty volume is much more open and considerate of the reader's eye. "The Bothie" is given entire, but the "Amours de Voyage" only in excerpts, and the "Mari Magno" not at all. On the other hand, the extracts from "Dipsychus" are properly labelled. Some variants will be observed. For summer travel by land or sea the volume is an admirable companion, and for the reflective it will never cease to be precious in all conditions of life.

Mr. Claude Phillips's monograph on Frederick Walker in the June number of the *Portfolio* (Macmillan) is an admirable piece of criticism, and conveys a clear and just notion of the strength and weakness of that still lamented artist, whose early death (in 1875) was thought a serious blow to British art. What Walker would have accomplished if his career had been prolonged must remain for ever an open question, but it may be doubted if he was really progressing at the last, and if he will not be best remembered by his earlier and simpler work, some of which, especially in illustration, is nearly first-rate and has had a great influence on his successors. The reproductions in the *Portfolio* are very good and well chosen, though one regrets the absence of some pictures criticised at length in the text—particularly "The Plough" and "The Old Gate."

M. René Doumic, whose reputation as a critic and a pleasant writer is steadily growing, sends out a new volume, 'Écrivains d'aujourd'hui' (Paris: Perrin & Cie.), in which he analyzes with considerable acumen and skill the characteristics of contemporary romancers and critics. There is a good, but not wholly satisfying, account of Maupassant, a clever sketch of Bourget, worth reading, as is also that on Loti. This last does not match, however, the admirable study by Mr. Henry James, and it is M. Bourget who ought to give us an article on Maupassant. The other writers treated of are Brunetière, Lemaître, Faguet, and Lavisse. It is pleasant to note that we are promised two other books by M. Doumic: one on Lamartine, which is to form part of Hachette's "Grands Écrivains," and one on George Sand, which is to appear in the "Classiques Populaires."

The third series of 'Figures disparues,' by M. Eugène Spuller, has been brought out by Alcan. The articles appeared originally in the *République Française*, Gambetta's organ, and the change in the character of that journal has furnished M. Spuller with a text for an interesting estimate of journalism in France at the present time. The whole book, indeed, is attractive, the articles on Changarnier, MacMahon, J.-J. Weiss, Cardinal Lavigerie, Waddington, and Jules Ferry, being particularly noticeable.

Macmillan & Co. publish in a handsome volume 'Select Specimens of the Great French Writers,' the selections made by Mr. E. Fasnacht. They are prefaced by an abridgment of Vinet's "Discours sur la littérature française" and Faguet's chapter on "La littérature au XIXe siècle." The selections begin with the works of Corneille and are brought down to the present day. A biographical notice and criticisms of the writer and his work accompany the extracts from his books; Sainte-Beuve, Vinet, Faguet, and Saint-Victor being the most frequently cited. The selection of authors and extracts is very good on the whole, though one cannot help wondering at the omission of Descartes, Bourdaloue, Stendhal, Flaubert, and Leconte de Lisle, when room could be found for Vauvenargues, Napoleon I., and Arnault.

In 1889 M. Max Leclerc, the political economist and educationist, was charged with the duty of examining and reporting upon the English middle-class education. The result of this study is now given in the shape of a volume entitled 'L'Éducation des classes moyennes et dirigeantes en Angleterre' (Paris: Armand Colin & Cie.; New York: Dyrsen & Pfeiffer). It is crammed full of information on the education in the family and the school, on the various types of schools, public, proprietary, and private, the action and influence of the State, of the universities, and the press. The author's conclusions are to be given in a subsequent volume, as the present one has no room for them: it is a statement of facts, and a very interesting statement too.

M. Paul Melon has done meritorious work in his 'L'Enseignement Supérieur et l'Enseignement Technique en France' (Paris: Armand Colin & Cie.). It is a comprehensive account of all the institutions of learning which fall under the above designations. Not only is the book valuable as giving at a glance a succinct, but clear, view of the work done in each institution in every city and town of France where graduate or technical instruction is afforded, it is also a boon to American students who are thinking of going abroad, and who desire specific information on just the points covered by M. Melon.

A few years ago some citizens of Munich, Bavaria, sent a petition to the competent authorities requesting that arrangements might be made whereby their daughters, after having completed the courses of study prescribed in the Young Ladies' High School, might have an opportunity of pursuing optional studies

for two years more in order to perfect themselves in certain special branches of learning. This petition was rejected on the ground that maidens ought to be sufficiently educated on reaching the age of eighteen, and should thenceforth devote themselves to domestic duties. The recent and radical change of public opinion on this subject is evident from the fact that on March 18 of the present year an association of ladies and gentlemen was formed at Munich, the aim of which is to establish in that city a *Mädchen-Gymnasium*, or institution designed to prepare girls for the university, giving them the same advantages in this respect that are now enjoyed by boys. The association began with seventeen members, and now numbers 122, and has 1,700 marks in the treasury. The executive committee is composed of twelve gentlemen and twelve ladies, including such persons as Magistrate's Councillor Friedrich, Prof. Dr. Günther, deputy, the celebrated poet Dr. Paul Heyse, Baron von Stauffenberg, member of the Imperial Diet and the Bavarian Parliament, Dr. Rohmeder of the municipal school-board, Lady Blennerhassett, the biographer of Madame de Staël, and others hardly less distinguished. The movement is very promising.

Prof. Oskar Lenz publishes in the Vienna *Neue Freie Presse* some data concerning the "Institut International Colonial," which was founded last January in Brussels, and which held its second meeting in that city on the 28th and 29th of May. The aims of the Institute are purely scientific, and comprise "the comparative study of methods of law and administration and of the natural resources of the various colonies; the promotion of international relations between persons interested in colonization, and the establishment of a central bureau for the interchange and publication of official documents," one of whose vehicles is to be a *Revue Internationale Coloniale*. The number of active members was originally fixed at sixty, to be divided among the various countries as follows: Great Britain 11, France 7, Holland 6, Germany 5, Russia 5, the United States, the Latin-American States, Spain, Portugal, Belgium, and Italy 3 each, Denmark 2, and all other countries not directly interested in colonization together 6. In addition there are to be associate, corresponding, and honorary members. Of the 60 active members thus contemplated only 29 have so far been elected, the most conspicuous names being: Léon Say, Paul Leroy-Beaulieu, in France; Lord Reay, Sir Alfred Lyall, in England; Dr. Herzog and Herr von der Heydt, in Germany; M. Camille Jenssen and Major Thys, in Belgium; Herr Frans Van de Putte and Prof. Van der Lith in Holland, and the Marquis Doria in Italy. America is thus far represented only by Baron Branco, the Brazilian Consul-General at Liverpool. Holland contributes the largest number of members, and her influence predominates in other ways. The Belgian Chamber has voted 10,000 francs to the Institute, which looks to its future publications for its regular source of income. The next meeting will be held at The Hague, coincidently with the International Geographical Congress, which is to assemble at London in the autumn of 1895.

The Strassburg publisher Heitz has just issued a complete collection of the poems of Walter von der Vogelweide, excellently translated into modern German by Eduard Kleber. It contains 183 *Lieder* and *Sprüche*, with an addendum of sixteen poems of doubtful authenticity. As is well known, this mediæval minnesinger was a bitter and persistent foe of the papacy, and in one of his sententious verses apostrophizes the *Opferstock*, or contribution for Peter's pence, as "Hêr Stoc," denouncing him as an evil emissary sent to drain the purses of the German poor in order to fill the coffers of the Pope. This bold personification was a puzzle to the rather unimaginative John Peter Uz, who in the last century rendered into modern German some of Walter's lyrics and kindly added a note stating that "Hêr Stoc" was probably a papal legate. We may also mention as an odd fate for an anti-papal poet that the statue of Walter von der Vogelweide recently erected at Botzen in the Tyrol (supposed to be the land of his birth) is regularly worshipped by the good Catholics of that country, who take it to be a representation of Christ, and there is very little doubt that the monument now being placed to his memory at Würzburg (where he is said to have died) will become an object of similar devotion. Indeed, Bavarian peasants, in passing the Royal Library at Munich, are wont to pay a like reverence to the sitting statues of Homer, Thucydides, Aristotle, and Hippocrates, which adorn the *perron* of that edifice, regarding them as figures of the four Evangelists.

For several years an elaborate exploration of the Baltic and North Seas has been carried on by Great Britain, Denmark, and Sweden, with especial reference to their respective fisheries. The methods of investigation and apparatus employed by the Swedish naturalists are described by Otto Pettersson in the *Scottish Geographical Magazine* for June. There are probably few travellers who will be attracted to the Bolivian Altiplanicie by Mr. D. R. Urquhart's account, in the same journal, of this forbidding region. It consists of the high plains or pampas lying between the mountain ranges at an average height of 12,000 feet above the sea-level. Economically it is interesting for the "abundant mineral deposits of silver, tin, copper, lead, antimony, etc., in the hills." The Indians nominally live in villages, which, however, are often found entirely deserted, the owners being away with their lamas or looking after their land. One village "is only really inhabited once a year, for about a week, when there is a great cattle fair, or *feria*." Dr. George Smith gives briefly some of the facts in regard to marriage and widowhood in India revealed by the late census. He says that polygyny is rare, only seven in every thousand married men having more than one wife. Polyandry is "restricted to the valleys of the Himalayas, where food is scarce, and to the Malabar coast in the south, where the ruling community, known as Nair, follow the matriarchal form, or succession through the female." The census also gives evidence of a growing decrease of girl infanticide, as well as of a general rise in the standard of living.

The *Geographical Journal* for June has for its opening article Mr. St. George R. Littledale's account of his adventurous journey last year across Asia from Batum to Pekin. The main object of his expedition, in which he was accompanied by his wife, was to shoot the wild camel. Apparently he saw but four, in the desert of Gobi, a little to the east of Lob Nor, all of which he shot. These rare animals were first discovered by Przhvalsky some fifteen years ago, and although now they are in an undoubtedly wild state, yet it is impossible to say, according to Sir William Flower, whether they are "really wild, that is, descended from camels which have never at any time been domesticated." It may be of especial interest to the advocates of free silver to know that on leaving Kashgar our traveller was obliged to carry with him the currency of the country in "chunks of silver of various weights, no two of a size, and making nearly two pony-loads." He accomplished some important geographical work, a part of his route being through unexplored country. An interesting description of the Indians inhabiting the valley of the river Napo, a tributary of the Amazon in Ecuador, is given by Mr. C. D. Tyler, whose observations were made during a three years' residence in this region. In addition to the vast vegetable wealth of its forests and cultivable land, "gold in illimitable quantities exists in the bed of the upper Napo."

The *Journal des Débats* for June 6 and 7 publishes reports of the examinations recently made by Drs. Backer and Bilhaut of the supposed remains of Louis XVII. in the old cemetery of Sainte-Marguerite. Both doctors agree in declaring that the bones cannot be those of the unfortunate Dauphin, since they form the skeleton of a child fourteen or fifteen years of age.

At the last session of the Icelandic Althing, a bill was passed providing for the establishment of a national university with a theological, medical, and law faculty. The plan has not yet been acted upon by the King, and as the sentiment of Icelandic students in Copenhagen is almost unanimously opposed to it, there is little probability of its becoming a law. The main objections urged are the financial condition of the country, which would make it impossible to obtain proper lecturers and apparatus, the absence of technical libraries, or provision for such in the future, the distance of the country from the centres of culture, and, last but not least, the possible removal of the scholarships open to Icelandic students at the University of Copenhagen. It was recommended, however, at a meeting of Icelanders recently held in Copenhagen, that a school for the training of native lawyers be established in Reykjavik, and that all other professional studies continue to be pursued at the University of Copenhagen. As the Icelanders have been famed for their love of law since Saga times, this modification of the original plan will probably win general approval.

Mr. Edward W. James writes to us from Norfolk, that the list of slave-owners in Princess Anne County, Va., which appeared in the January number of the "William and Mary College Quarterly Historical Papers," was derived by him from a copy of the third census, taken by William Bishop, assistant marshal, now to be found in the Clerk's Office of that county. This list was confined to the owners of not less than ten slaves. Mr. James has since completed his transcript, which will be printed in some future number of the *Quarterly*.

There are three newspapers, which divide about equally the period since 1810, that are indispensable to the student of American history. They are *Niles' Register*, the Boston *Liberator* (1831–1865), and the *Nation*. The *Liberator* is the fullest and most convenient repository of the spirit of the age during the anti-slavery contest, and its files have been remarkably preserved. The vast number of precise references to it in the four-volume Life of William Lloyd Garrison, which are in turn rendered accessible by a capacious analytic index, make its consultation a matter of great ease and certainty within the scope of that biography, which is virtually a history of the anti-slavery movement, moral and political. Librarians have recently had an opportunity to procure almost complete sets, hitherto stored by Mr. Francis J. Garrison, No. 4 Park Street, Boston. His

stock has in consequence been rapidly reduced, and he now can supply only the volumes from 1852 to 1865 in some half-a-dozen sets, lacking a few numbers. It can truly be said that any fragment of the *Liberator* file is worth binding and preserving. The present chance to secure so considerable a portion of the series is final. The price, to librarians agreeing to bind, is $2 per volume.

—The neglect of the historical MSS. in the Bureau of Rolls and Library of the State Department has long been a source of complaint, and it is a matter for congratulation that the Department is making an intelligent effort to acquaint the public with the contents of the many collections in its keeping. The Bureau is now publishing a Bulletin, of which Nos. 1 and 3 are before us. No. 1 comprises a catalogue of the manuscript volumes containing the records and papers of the Continental Congress; an index to miscellaneous papers, which will form the chief staple of the Bulletins; and an appendix initiating the history of the Constitution of the United States, 1786–1870, by a simple printing of documents without any connecting text, though with occasional notes. The miscellaneous index is drawn from all the "chapters" in the State Department, and the items are traced by chapter reference (A, B, C, etc., the designation of the chapters being indicated as far as I). The group of items in No. 1 ranges alphabetically from Abbot to Loyalists, the last entry (chap. A, No. 51, consisting of intercepted letters, 1775–1781); in No. 3 it ranges from Adam to Zeisberger (the last entry being a repetition, by way of correction, of the same item entered in Bulletin No. 1 under "Feisberger," but alas! a fresh error is perpetrated by misspelling "Ziseberger"). In other words, a new Bulletin a new alphabet. While this is no doubt the only practicable and the fairest scheme of advertising the miscellany, it seems a pity that these titles should not be stereotyped as blocks for ultimate reassembling in one alphabet. As it is, the Bulletins are printed from type, and to the number of only 750 copies.

—Bulletin No. 3 is of special interest. The "arrangement" of the Washington Papers is given in chronological order, making reference to a particular series a simple task. Incidentally it might have been shown what had been printed. This is followed by a continuation of the Miscellaneous Index, more properly a calendar of the miscellaneous letters in the collections. When completed, this calendar will have high personal interest to those in search of the Revolutionary service of their ancestors. The most valuable portion of this issue is the literal reprint of the proceedings of the Federal Convention, taken from journal and papers deposited in the Department by President Washington in 1796. Elliott used this material, but united the records so as to make a continuous journal. In this new edition the different papers are kept distinct, and gain in definiteness. The corrections and interlineations made in the record are reproduced, as are even the endorsements by Pickering and others. A few notes would have aided reference from committee to House proceedings; and the paper on page 329 should have been identified as Randolph's plan, submitted on May 29. The tabular arrangement of the yea and nay votes is an advantage. A touch of the picturesque is to be found in the letter from Jonas Phillips, a Jew, pleading for religious liberty (p. 281). The print of these Bulletins is admirably clear. No. 2 will be a revision of the Calendar of the Correspondence of James Monroe printed in a small way four years ago by the Department. An index of the Jefferson Papers will be ready within a year. Vol. ii. of the history of the Constitution will be begun in Bulletin No. 5.

—Mr. Allen is doing a public service in these publications, and the issues testify to his painstaking care to secure accuracy. In the case of Pinckney's "Plan" in No. 3, it is a pity that he did not affix to the endorsement on the MS., "To be printed p. 11," the date, "1819," when Pinckney furnished the paper to the Secretary of State for publication. The fact is, as Madison states, that no copy was made of the original paper when it was presented to the Convention in 1787, and the original was not among the documents of the Convention intrusted to Washington and ultimately placed in the State Department. Thirty years after the adjournment, Pinckney supplied the document which Madison unsuspectingly inserted in his journal. Subsequently it was observed that this paper contained at least four provisions which Pinckney himself had opposed in the Convention; and it soon became apparent that the document had been altered to conform to the changes made by the Convention. Madison suggests that, as the changes were made, Pinckney incorporated them into his own copy, and that the erasures and interlineations, "after a lapse of more than thirty years," became "confounded in the mind of the author" with his original work. We believe that this paper in the State Department has never been subjected to critical analysis. It would be an interesting study for some competent hand to distinguish the original from the emendations, and demonstrate what parts of it are clearly and unquestionably Pinckney's. In claiming too much, honestly it may be, he impaired his claim to everything. As the "Plan" now stands in print, it is valueless as one of the sources of the Constitution.

—The latest noteworthy contribution to the Heine cult is an article in the June number of the *Deutsche Rundschau*, by a Frenchman, M. Jules Legras, professor in Bordeaux, who studied German literature in Berlin. M. Legras, who had long felt that the real history of Heine's stay in Paris, from 1831 to 1856, was not sufficiently well known, at last secured from the sons of the French publisher of Heine the loan of a bundle of papers which, shortly after the poet's death, was given by his widow to Michel Lévy. These papers were then turned over to M. Jean Bourdeau, the French translator of Heine's memoirs, who, however, seems to have advised against the publication as a whole. The collection consists of verses, since printed among the "Letzte Gedichte und Gedanken," French translations of some of Heine's poems, either by himself or others, and of letters. The letters are, in Mr. Legras's opinion, identical with the famous "Heine papers" which in 1868 were offered to the Duke de Gramont, then French Ambassador at Vienna, by a Herr von Friedland, the brother-in-law of Lassalle, who demanded 30,000 francs for them. Those papers were said to have contained, besides letters addressed by Heine to Thiers, Guizot, Mignet, the Princess Belgiojoso, and other important personages, a poem denouncing Napoleon III., and sixty-seven poems equally disrespectful towards the King of Prussia. The Duke de Gramont declined the offer, and it seems a pity that the poem against Napoleon (if it actually existed) was not preserved rather than the letters, which are not particularly striking. Heine does not rank among the famous letter-writers. Mr. Legras says that he never wrote a letter for the mere pleasure of the thing; that he seems always to have had a distinct purpose in view in his epistles. Only one letter is given in the original French, as showing Heine's French style, which was not faultless. The most interesting letter quoted is one addressed to the Princess Belgiojoso, whose acquaintance he made soon after his arrival in Paris, and in whose salon, frequented by Thiers, Mignet, A. Thierry, Musset, Cousin, Liszt, Ary Scheffer, and other members of the intellectual élite of Paris, Heine was thoroughly at home. Mignet, who was a special favorite of the handsome Italian, induced her to interest Thiers in Heine's behalf, and, according to M. Legras's investigations, it was Thiers and not Guizot who, in 1835 or 1836, granted Heine the Government subvention of 4,800 francs which his enemies have made so much of. Guizot's son himself told Mr. Legras that his father, on assuming office, was requested by Thiers to continue Heine's pension.

—It appears that the Princess Belgiojoso, who acquired considerable influence over Heine, made strong efforts to wean him from the charms of his Mathilde, and, yielding for a time to her representations, he went in 1835 to Boulogne, whence he wrote, both to Mignet and to Campe, his publisher, who probably dreaded the vulgarizing influence of Mathilde on the poet's writings, that he was "cured and purified." But the cure did not last long, and Mathilde soon became Madame Heine. The Princess bore him no grudge on that account, and he continued to correspond with her. In the letters to Mathilde published by M. Legras, Heine speaks of his eternal financial difficulties, for which he reproaches Campe directly in a letter in which he says: "I cannot yet believe that you are willing to cheat me for the sake of so paltry a sum." But Heine's denunciations of his publisher must not be taken too literally, any more than his occasional poetic glorifications of him. Of pathetic interest are the missives to his French publisher, in scarcely legible scrawls, continued almost up to the moment of his death, betraying the extreme care Heine bestowed on the proof-reading of his works, and occasionally revealing the grim humor which he commanded in the midst of his agonies. Two months before his death he wrote to Lévy: "I have been so ill these last few days that some German countrymen of mine who had come to see the Exposition, postponed their departure in the hope of being able to attend my funeral. But they found themselves out of pocket after all."

—No sooner had Dr. Quidde's article "Caligula" appeared in pamphlet form than it was severely denounced by the Berlin *Kreuzzeitung* on account of what might be called its strong local coloring and the implicit parallelism between Roman Cæsarism in the first and German Cæsarism in the nineteenth century. In this criticism the organ of Prussian conservatism singled out the autocratic apothegms of the young Roman emperor as peculiarly insinuative and offensive. To this attack Dr. Quidde replied that the pamphlet is an historical study, both in form and in contents, and adheres strictly to the theme; that he has not been guilty of any distortion or misrepresentation, has lugged in nothing foreign to the subject, and has made no statement except on the best authority and in perfect accord with other writers. He admits that "the brochure is not written in the style of anti-

quarian pedantry, but with lively historical-political interest, more in the manner of the publicist than of the professor," but repudiates all responsibility for what it may suggest to others, and especially for the invidious inferences drawn by the critic of the *Kreuzzeitung*, who also accuses him of entertaining republican views of government—a charge which he does not deny. The immediate effect of this controversy was to cause an increased demand for the censured work which the booksellers were hardly able to supply. Meanwhile a number of the Hamburg *General-Anzeiger* has been seized and confiscated by the police, and the editor threatened with prosecution for lese-majesty, for publishing a review of the pamphlet with extracts, while the pamphlet itself remains on sale and is exposed in all the windows of the Hamburg bookstores without molestation—a striking illustration of the absurdities and vagaries of the censorship of the press when administered by superserviceable officials. Even the Bavarian Academy of Sciences could not repress the spirit of loyalty which usually animates such learned bodies, and has shown more zeal than discretion in discussing the affair and expressing its disapproval of the publication from a "scientific" point of view. Strictly speaking, this can only mean that injustice has been done to the character of Caligula, or that the allusions to King Ludwig II. are irrelevant, since there is no reference to any other sovereign. To this stricture Dr. Quidde has replied that, while it is perfectly proper for individual members of the Academy as scholars to criticise his work, it does not concern them in their corporate capacity, since it is not an academical dissertation issued under the auspices of that institution. A telegram from Berlin announces the fact that the Emperor William has read the brochure with complacency—*mit gutem Behagen*.

—From Dyrsen & Pfeiffer, successors to F. W. Christern, comes a new volume by the well-known Bonapartist partisan and enthusiast, Frédéric Masson. The title of the work is 'Napoléon chez lui: La Journée de l'Empereur aux Tuileries' (Paris: E. Dentu). To M. Masson all of Napoleon's deeds bear witness of a God. His volume published last year described 'Napoléon et les Femmes,' and M. Masson carefully tracked the Corsican through all his liaisons, both great and small, with scrupulous exactitude and with an air of devout reverence. 'Napoléon et les Femmes' had at least a sociological or pathological interest, but there is not even a spice of wickedness to relieve the deadly dulness of 'Napoléon chez lui.' Here may be found minute descriptions of the uniforms of Napoleon's guards, biographies of his various valets, the kinds of soap that Napoleon used on his hands, the quality of the Emperor's underwear, and the prices of his various articles of raiment. It may be of service to some one to know how the pigeon-holes in Napoleon's desk were classified, how many papers he signed in one day, what expenditures were involved, and how many hours of continuous service were exacted from his private secretaries; but surely only an idle mind will care to learn the names of the Emperor's cooks, the kinds of wine he drank, the size of his official decorations, and the number of his handkerchiefs. Nevertheless, to M. Masson the rubbish of Napoleon's life is all fine gold. The contents of his snuff-box seem as worthy of study as the contents of a state paper, and the attendant sneezes are imagined with pious emotion. F. de Myrbach provides a half dozen illustrations to fit the text. Instead of Napoleon on the bridge at Lodi or standing guard over the sleeping sentinel, we have here Napoleon clad in an undershirt and shaving himself, and Napoleon drinking a cup of tea. While the author heaps up these rags of history about his hero, he never loses his attitude of worship. Even pronouns that refer to Bonaparte are capitalized as though they dealt with Deity. Thus, we read of "l'image souveraine de Celui qui fut, entre les hommes, le plus près de ce que l'on nommait un Dieu." M. Masson promises a series of volumes of this same sort. Unless the sense of humor and the capacity for ennui are disappearing together, his labors ought to do a much needed service towards extinguishing the recent rekindling of the Napoleonic legend.

RECENT NOVELS.

The Holy Cross, and Other Tales. By Eugene Field. Cambridge: Stone & Kimball.

Katharine Lauderdale. By F. Marion Crawford. Macmillan.

Bayou Folk. By Kate Chopin. Boston: Houghton, Mifflin & Co.

Pembroke. By Mary E. Wilkins. Harper & Brothers.

Thorough. By Mary A. M. Marks. 3 vols. London: Bentley & Son. 1894.

Mr. Field's little volume of stories is attractively printed, with hints at the archaic which suit very well the matter of parts of the text; two or three of the stories dealing with folk-lore, and with that kind of aloofness from to-day which makes appropriate the use of such phrases as "It is to tell of," "Naught recked he," "Great marvel had he to this thing," "A full evil cat," "A monster ribald dog pup," "Now wit ye well," and so on, now like William Morris, and anon like Pepys, and again after Brander Matthews. Occasionally the grammar is a trifle archaic also, as, "whereby not only you and me but even the Jew shall be redeemed to Paradise." From this the note changes to the ultra-gushing or free-sugar style, thick with roses, angels, and birds, and lastly we have the American-humorist style—a manner for every mood. Personally we own to a preference over all the rest for "Daniel and the Devil" and for "Félice and Petit Poulain." In these the fun and the fancy of Mr. Field leave their high-water mark, and flow along that middle way wherein he walks most safely. The one is less strained than the over-humorous "Methuselah"; the other, a charming sketch of a French horse carried off to do duty for the Prussians, is free from the pulpiness of certain other pages. There is, however, a genuineness about even the long comings of Mr. Field which disarms irritation. It is not that affectation injures his writings; what we remark is, that lush expression does not befit a tranquilly poetic feeling, nor publicity a humor meant for the table.

Mr. Crawford's latest novel suffers from luxuriance of another sort, that of analysis and of incident with no outcome. We have two volumes of 'Katharine Lauderdale,' which take us only from Monday to Friday, and only to the beginning of Katharine's career. Not one of the dozen stories begun in the two volumes is ended, for, under the peculiar circumstances of the heroine's marriage, that too is less the end of a story than it is even in real life—the author's satire, perhaps, on life? This is hardly artistic, although it leaves us very ready to be interested in the promised sequel. To write two volumes and not solve one mystery is hardly playing fair. That it is endurable is a great tribute to the author's skill; that it is absorbing is to say that Mr. Crawford's pen is even mightier than the scissors. The book, it is superfluous to add, is bubbling with good sayings of both the graver and the lighter sort. Mr. Crawford never disappoints one there, nor in his smooth phrasing; and though there is endless repetition of the what, the when, the why, and the how, yet there is a reconciling absence of egoism which makes more tolerable than in another author the long, long stretches of what children call "the thick part" of his pages. One volume of 'Katharine Lauderdale' would have been enough, considering how short a distance she leads us, and considering, too, that the story of a man's temptations to drunkenness is not one to be detailed unnecessarily, and as an *opération de luxe*. The final scene, where the hero becomes autobiographic at a dinner party, strikes a false note from every point of view. There are many new and clever characters whom it will be interesting to meet again. The family Lauderdale, indeed, from "the primeval Alexander," four generations ago, down to the Katharine of the present time, are an American house of Saracinesca. The race traits and the race variations are subtly indicated, and will, no doubt, receive further light in the future. The Lauderdales ought to find it extremely interesting reading, and the public will if Mr. Crawford will not forget that blood, being thicker than water, may coagulate if it is not kept in motion.

Of writing many stories of Louisiana life there is no end. It is not surprising, for the material embraces all that is most picturesque, whether the scenes of action be New Orleans or the inland parishes, whether Creoles or negroes be the actors. Kate Chopin has written of the 'Bayou Folk' dwelling in Natchitoches Parish, who are of every race and admixture of race that can be evolved from stems American, French, Spanish, Indian, Negro. Her stories are among the most clever and charming that have seen the light. Her pen is an artist's in choice of subject, in touch, and in forbearance. There is never a word nor an idea too much, and in the score of sketches in which the same names often recur, there is no repetition, nevertheless, of herself or of others. Hers is good work, and as interesting as the good often is not.

Miss Wilkins, in her long "short story," 'Pembroke,' moves a step forward and outward from the plain, unvarnished style she has hitherto employed. Here are more phrases, more description, more comment. She is perhaps uniquely the writer—may her tribe increase—of whom one can truly say that this is a healthy sign; it suits the enlarged scope of her book, which yet retains the quality that is all Miss Wilkins's own, never so conspicuously so as now that she has a school of imitators. The branches of her genius seem to be spreading when one reads such sentences as this of old Margaret, the only servant in Pembroke: "People saluted her with respect, and her isolation of inequality gave her a reversed dignity." Or this, of the springtime of the year: "The air was full of that strange fragrance which is more than fragrance, since it strikes the thoughts which come in the spring alone, being the very odor thrown off by the growing motion of life and the resurrection." Of a cold, hard woman, visited by neighbors on what she takes to be an errand of scrutiny: "Deborah, sitting erect in one of her best flag-bottomed chairs, looked as if she were alone in

the room." Of a woman of short and lean figure: "Mrs. Ray had never considered herself a small woman; she seemed always to see over the tops of other women's heads."

"Sarah Barnard, during all absences of her family, dug busily at imaginary pitfalls for them; had they all existed, the town would have been honeycombed."

"Deborah never yielded to any of the vicissitudes of life; she met them in fair fight like enemies, and vanquished them, not with trumpet and spear, but with daily duties."

"There was that tone of command in her voice which only a woman can accomplish. It was full of that maternal supremacy which awakens the first instinct of obedience in man, and has more weight than the voice of a general in battle."

"Sylvia felt her battle was over, and she felt the peace of defeat."

The peace of defeat! That phrase alone is a lien upon Fame; and all these turns of expression declare a new freedom of treatment, a loosened rein to the imaginative side of perception.

As to the story itself, it is still of the New England soil. Gray, grim, rock-bound as it is, it yields the bloom of mayflowers; dark under lowering skies, it is lighted with warm gleams where an occasional sun breaks through. Here is all the hardness of the race; here is all their faithful fortitude. Here, too, are their eccentricities; in another clime they would become comicalities; in such earth they go only so far as to wear an air of being the obverse side of the Divine Wrath. The village of Pembroke is to all New England what New England is to the rest of America—a mother tincture of the hardness, the softness, the conscience, the passion, the ice, the fire, that the Pilgrims brought and left there. In Pembroke the ruling motive of life is a fierce human will. "Barney Thayer," says his sweetheart, "has got a terrible will that won't always let him do what he wants to himself." Barney Thayer's mother, the invincible Deborah, bequeathed him this will; her own wrecked the lives of nearly all who came near her, while yet she was passionately struggling to save them from hell-fire. Deborah's sister, Hannah Berry, had the same will, and wreaked it on her husband and sister. Cephas Barnard had it, and made his family eat sorrel pies. Richard Alger had it, and it made him torture, for nothing, during long, long years the woman he loved. Charlotte Barnard had it for good, and turned it to loving account. This is the gist of the book—the "terrible will" of the New Englander intensified by the conditions of narrow life in a small old village, isolation, close neighborship of generations, heredity with too little variation. According to the subject it works upon, does it become the will that "won't let him do what he wants to himself"—that holds in the passive clutch of a groove, or that perseveres and attains. The work, in fact, is a treatise on the Divine Will manifested as the New England Won't, under circumstances which many of us have seen and a few observed, but none brought to the daylight of recognition as fully as Mary Wilkins. Miss Fuller has indeed made a philosophic study of family traits in small towns, with a different trend. She dwells upon the effect of widening influences in modifying and diffusing the original family features. Miss Wilkins's study is of the converse and deeply tragic side—the crushing consequences wrought by the concentration of such traits when narrowed to a very few families, leading forlornly stifled lives. The gloom would be too heavy were it not that Miss Wilkins has set her story among her own familiar triumphs of detail, which never fail to attract and hold.

Were it not for the designation on the title-page, and that hitherto Mrs. Marks has been known as a writer of fiction, we should scarcely have been inclined to range the volumes before us with other late productions in light literature. 'Thorough' is in truth an historical treatise of a grave character—covering twenty years of troubled Irish history—opening, as may naturally be supposed from the name, with the Earl of Strafford's rule, and ending with the period when the country lay prostrate at the feet of Cromwell. Bishop Bedell, Owen Roe O'Neill, Ormond, the Nuncio, and other characters of the time pass across the stage. There are many fine descriptions of scenery and touching love passages (some of them within prison walls). There is deep pathos. The story for the most part is written in quaint language as if penned by some contemporary. The complicated history of the period is worked out with a conscientious effort after truth. We cannot but suspect that the scheme of the book was suggested by Tolstoi's 'War and Peace.' Contrary to what is the case in many works of the kind, the story is most prominent and interesting at the commencement—we are led more and more into the history of the time, and the story falls into the background as it proceeds. The apt and abundant extracts from writers contemporary with the period treated, placed at the head of each chapter, are some index to the labors the author must have given to preparation.

As a novel, 'Thorough' cannot be considered a success. It throws a vivifying light upon history, and will leave on the interested reader an impression not likely soon to be effaced. Atrocities committed by the Irish are not spared; but the motive of the book is evidently to show that they sprang from "natural" causes, and from the treatment to which the people had been subjected. The following will illustrate the general temper of the author; it is one of those numerous passages in which the supposed narrator stands apart from narrative to moralize thereon:

"Was there ever a war yet in this world, I will ask you, where there was none but lawful killing on the battlefield? no passions raised but what the first breath of the recall blew away? no violence done by soldiers drunk with wine and victory? no private spoiling by conquerors greedy of plunder? no pilferings by armed men hungry from unarmed men full? Do you think that in all wars, save Irish ones, men can go out to kill one another one day, and be the next but as haymakers coming from the field? And truly it turns one's stomach to read in *Politicus* and *Britannicus* of the shooting in cold blood of prisoners of war in England and Scotland, told so much as without the quiver of an eyelid, and then on the next page to find the newsman in a pious bewonderment at the incredible cruelty of the poor naked Irish, risen at last on their hereditary oppressors."

Some doings of Mrs. Marks's countrymen in Matabeleland which have been enacted since these words were written, give them additional point.

SOME MUSICAL BOOKS.

Mediæval Music. By R. C. Hope. Charles Scribner's Sons.

The Pedals of the Pianoforte. By Hans Schmitt. Philadelphia: T. Presser.

Modern Singing Methods. By J. F. Botume. Boston: O. Ditson & Co.

Musical Gestures. By J. F. Bridge. Novello, Ewer & Co.

History of the Handel and Haydn Society. By C. C. Perkins and John S. Dwight. Boston: A. Mudge & Son.

Masters of French Music. By Arthur Hervey. Charles Scribner's Sons.

Letters of Franz Liszt. Translated by Constance Bache. 2 vols. Charles Scribner's Sons.

Mr. Hope's book on 'Mediæval Music' is written in that iconoclastic spirit which is the fashion just now in musical literature. It must be admitted that there is much to commend in this fashion, in view of the "facts" in musical history which have been copied dozens of times into new books, although they are incapable of verification. The study of mediæval music is, in truth, such an extremely difficult subject that, owing to the complexity of the notation, an original investigator needs to bestow as much time on this dead musical language as he would on Sanskrit. Mr. Hope, as editor of the 'Popish Kingdome,' might be supposed to be in sympathy with his field of labor, and he certainly shows the spirit of the independent investigator. He shows, for instance, that one of the great heroes of early Christian music, Pope Gregory, to whom all sorts of reforms are ascribed, really did nothing of importance for music, being apparently quite indifferent to that art, as may be inferred from the fact that in his voluminous correspondence of 800 letters "there is not a single line, allusion, or hint of any kind respecting either the chant of the Church or of an Antiphonary." Taken as a whole, Mr. Hope's book presents a clear view of a difficult subject, and we would only call attention to the fact that his statement on page 15 that the oldest scale is the pentatonic does not harmonize with the statement regarding Egyptian flutes made on page 21.

We had occasion a few months ago to commend a brief and practical treatise on the pianoforte pedal by Mr. A. Venino. Hans Schmitt's treatise on this subject is a much older book, but it did not appear in an English version till after Venino's, the translation being by Mr. F. S. Shaw. While Mr. Venino's book is somewhat more up to date and practical, Schmitt's is more elaborate. Pianists would do well to secure them both, and try to make up for the long and extraordinary neglect of this extremely important branch of piano-playing. Schmitt relates how, when he conceived the idea of writing such a treatise, he hastily examined Marx's 'Compositionslehre,' fearing lest he might have been anticipated, but found that the word pedal was not even once mentioned. Nor was this strange, for in the old school of pianoforte-playing, as represented by Hummel, "the value of the pedal for harmonic and tone coloring purposes was not at all understood, the pedal being, indeed, looked at rather askance as a means of creating confusion." The Chopin-Liszt school took a very different view of the matter—so different that the Frenchman, Alfred Quidant, was quite justified in giving his brochure on the pedal the title 'The Soul of the Piano.' Rubinstein is quoted as saying: "I consider the art of properly using the pedal as the most difficult problem of higher piano-playing, and if we have not as yet heard the instrument at its best, the fault possibly lies in the fact that it has not been fully understood how to exhaust the capabilities of the pedal." Paderewski seems to have discovered what Rubinstein, Liszt, and Chopin had left undone, and when it is borne in mind how much of his marvellous success is owing to his masterly treatment of the pedal in securing orchestral variety of coloring, pianists need no further stimulus to a careful study of the art.

Mr. Botume's little book on 'Modern Sing-

ing Methods' appears in a second edition with an appendix on "The Old Italian School," "Style," etc. Even with this appendix it contains only forty-four pages, and must, therefore, be considered chiefly in the light of a guide to longer books on the various topics discussed, these books being always mentioned. Mr. Botume, a Harvard graduate, is well known as a singing teacher in Boston, and his advice may be safely accepted. We have only one criticism to make. In common with most teachers of the voice, Mr. Botume cannot get rid of the absurd idea that Patti is "the last surviving example of the great era of singing." What is "singing"? Is florid song the only kind of song? Are not the operas of Weber and Wagner, the songs of Schubert and Franz, infinitely greater and nobler music than that which Patti sings? In our opinion Lilli Lehmann, Rosa Sucher, Amalia Materna, and Frau Joachim were, in their best days, much better singers than Patti, because their branch of the art was a much nobler one. We advise Mr. Botume to await the English version of Prof. Hey's method of dramatic song, now in preparation, and to devote a special appendix to it in the third edition of his guide.

Perhaps England is not a musical country, but it is nevertheless productive of some curious musical schemes. The Tonic-Sol-Fa as a method of vocal notation is extremely prevalent in that country, while the more musical countries give it no attention. And now comes Dr. Bridge with still another notation, which is so extraordinary that we should be inclined to take it as an elaborate and rather ponderous joke, were it not incorporated as a new number in Novello, Ewer & Co.'s well-known and useful series of music primers. Dr. Bridge's treatise is an attempt to impress upon the minds of pupils the ordinary musical signs by gestures. We open it and find a series of illustrations representing boys making various deaf-mute signs to represent whole notes, half-notes, rests, stave, clefs, sharps and flats, and so on. He thinks this system may be useful to children in the nursery and for country choirs which are "often trained by the wife or the daughter of the clergyman." But why should not the wife or daughter of the clergyman simply use a blackboard and chalk and ordinary notes and rests and stave, like all other civilized musical people, instead of teaching poor children an elaborate gesture language utterly useless for all real musical purposes? The more we think about the matter, the more we feel tempted to consider it a joke after all.

The oldest and most important large choral organization in America, the Handel and Haydn Society of Boston, has issued a volume of 667 pages embodying its history from 1815 to 1890. The editors, Mr. C. C. Perkins and Mr. John S. Dwight, were greatly aided in their labors by a collection of newspaper clippings placed at their disposal by Mr. S. Jennison. The first pages are devoted to an amusing sketch of early musical atrocities in New England. In 1721, for instance, the Rev. T. Walter published a singing book in which he declares of the four or five tunes then in use that they sounded

> "like five hundred different tunes roared out at the same time, and so little in time that they were often one or two words apart; so hideous as to be bad beyond expression, and so drawling that the singer had sometimes to pause twice on one word to take breath."

From this state of affairs to the present condition of choral music as exemplified by the Handel and Haydn Society, is a wide step indeed. Even within the last quarter of a century the progress has been immense, as can be seen by comparing the programmes before that period with those after. For many years Handel and Mendelssohn were the chief and almost exclusive attractions. While the "Messiah" and the "Creation" had their first complete performance as early as 1818, Bach's "Passion" was not given entire till 1879, and in 1870 we find Mr. Dwight pleading hard for at least some selections. In recent years Bach has received more attention, but he will not have his day till the next century. Among the reprinted criticisms those of Mr. Apthorp are of especial interest and value.

Mr. Hervey's 'Masters of French Music' is one of a series which now includes two others, 'Masters of English Music' and 'Masters of German Music.' It is entertainingly written, in a style light enough to make it good for summer reading, and at the same time substantial and reliable. Such a book was really needed, for biographies of eminent French musicians are remarkably scarce in the English language. The present somewhat artificial prominence of French opera in New York (the champions of both German opera and Italian opera having set it up as a sort of neutral ground) ought to help Mr. Hervey's book to the success which it deserves. It considers in considerable detail the lives of Thomas, Gounod, Saint-Saëns, Massenet, Reyer, Bruneau, and in a final chapter the minor composers of the day. The appendix contains a convenient list of the works of the principal musicians. The longest and most interesting chapters are those on Gounod and Saint-Saëns, while in the one on Bruneau the author gives a good glimpse of the very latest tendencies in French music. We cordially commend this book to all who are interested in music, biographically or critically.

Our long review of the original edition of Liszt's letters, in German and French, dispenses us from taking any further notice of the English translation now before us than to say that it has been admirably executed by Miss Constance Bache, and that the publishers have contributed their share to the attractiveness of a work which of course ought to be in every musical library. The English version contains four letters not included in the German edition. In one of these Liszt writes in reference to his visit to England, after an absence of over forty years: "The *accented point* of my coming to London is to be present at the 'Elizabeth' performance. It was this that decided my coming, and it is to be hoped it will be a success." It is perhaps curious that not only is the one important biography of Liszt written by a woman—Lina Ramann—but his letters have been collected and translated by two women—La Mara (Marie Lipsius) and Miss Bache.

RECENT LAW BOOKS.

THE high estimation in which the Count de Franqueville, as a critic of English institutions, is held by the English people, strongly reminds one of the feeling entertained by Americans towards Mr. James Bryce, author of 'The American Commonwealth.' Both have apparently achieved the double success of seeing foreigners more clearly than the latter see themselves, and of obtaining from them an acknowledgment of the fact. The latest of several works by Count de Franqueville on English institutions is concerned with the judicial system of Great Britain ('Le Système Judiciaire de la Grande Bretagne,' Paris: J. Rothschild). In the space of two volumes the subject is divided into three parts, treating respectively, (1) of the organization of the English courts; (2) of their procedure, civil and criminal, and (3) of the judicial systems in Scotland and Ireland. The work is not, and is not intended to be, an exposition or criticism of substantive law. Its scope is confined to a concise statement of the organization and procedure of existing legal machinery, including an interesting account of the inns of court, the bar, the magistracy, the jury, and the police. So far as is necessary to explain existing institutions to the general reader, the work is historical; but the historical introductions are not intended for the specialist. Neither is the character of the book critical. Here and there, however, we find rather striking critical judgments. For example, after explaining at length English criminal procedure, the author states that it would be impossible to imagine a system giving to a person accused, who is both guilty and rich, more facilities for escaping a conviction, and assuring to a person accused, who is both innocent and poor, fewer facilities for demonstrating his innocence—an opinion not unnatural in one accustomed to the quick and easy methods of French criminal practice, and curiously like opinions sometimes expressed in this country nowadays.

The merits of a work of this kind, if merits it have, should consist in clearness, conciseness, and yet completeness of statement; excellence of arrangement, style, and temper; and accuracy. The first six qualities are, we think, possessed by this book to a high degree. Its admirable temper again reminds us of 'The American Commonwealth.' As to the last-named quality, which is perhaps of the first importance, we need only state that a careful English critic, on a thorough examination of the work before us, has been unable to detect a single serious misstatement of fact, and, when compelled by the exigencies of criticism to point to some defect, lest he might give the book a character "unredeemed by a single vice," has referred to several mistakes in spelling and the danger of relying upon Lord Campbell and Lord Macaulay as authorities on matters of law.

Mr. Joseph H. Beale, jr., has prepared a fourth edition of 'Parsons on Partnership' (Boston: Little, Brown & Co.), and, by the addition of further and more recent authorities, the elimination of old and the insertion of new matter in the text, together with some excellent new notes and a chapter on business combinations and "trusts," has rendered a valuable book, which had become somewhat obsolete, again serviceable to the profession. Prof. Parsons was among the foremost to grasp the mercantile theory of a partnership as an entity distinct from the partners themselves, which was finally adopted by the House of Lords in Cox vs. Hickman; but the conception had not obtained a wide recognition when the former editions of the work were published, and was not treated in them. Mr. Beale has therefore entirely rewritten those chapters which deal with the nature and test of a partnership, and his statement of the development of the law is interesting and instructive.

'The Laws and Jurisprudence of England and America' (Little, Brown & Co.) is the title of a series of twelve lectures delivered by Judge John F. Dillon before the law students of Yale University, the main purpose of which is "to inspire a patriotic . . . regard for the laws and institutions of our country, . . . to incite enthusiasm in the study of the law, . . . and to exhibit the excellences of our legal system" as compared with the Conti-

nental law. These lectures are a general and somewhat desultory treatment of a very large subject. They are, however, suggestive, and well calculated to achieve their immediate purpose. Judge Dillon has an interesting, if somewhat inflated, style, and his remarks upon such "living issues" as legal education, trial by jury, case-law, the law reports, codification, and law reform have a positive character which is refreshing, if not wholly convincing, and is not unbecoming in a judge of wide experience and learning.

The inductive or "case-method" of teaching the English common law, introduced into the Harvard Law School by Prof. Langdell twenty years ago, has been successfully applied by Dr. Freeman Snow to the teaching of international law in Harvard University, and his collection of cases ('Snow's Cases on International Law,' The Boston Book Co.) is primarily intended to be used for that purpose. Besides the important cases, this collection contains a valuable syllabus in which references to the works of many of the most eminent writers of different countries are grouped under specific heads, thus making it possible to compare their opinions with the sources upon which they rely. The task of selection and discrimination, always a difficult one in preparing a book of this kind, has, we think, been performed by Dr. Snow with marked success. He has furnished another illustration of the increasing application of the historical method of inquiry to all branches of knowledge which have had a long period of development.

'Demarest on Elevated Railroad Law' (Baker, Voorhis & Co.) is a statement and critical discussion of the law as laid down by the New York courts determining the respective rights and remedies of elevated-railroad companies and "abutting owners" of real estate. This law is the result of a vast mass of litigation following the decision in the now famous case of Story vs. the New York Elevated Railroad Company, that the abutting owner, even although he does not own the fee of the street, is entitled to compensation for injury to his property caused by the introduction of the roads. The decision in the Story case is often said to be judicial legislation, and Mr. Demarest is evidently of that opinion, though he concedes that it, and others which have followed and extended the principle it established, are in accord with the dictates of natural justice. The law of elevated roads is a new growth, and its development in different jurisdictions must depend largely upon the construction put on the clauses in the various State constitutions providing for compensation when private property is taken for public uses. As an historical statement of the manner in which different questions have come before the courts in New York, and of the precise points adjudicated, Mr. Demarest's book should be of considerable value.

'Norton on Bills and Notes' and 'Clark's Criminal Law' (St. Paul, Minn.: West Publishing Co.) are two legal "hand-books" of which the *raison d'être* is not obvious in view of the overgrown literature of the law on these subjects. The former is intended for the use of students, but it is difficult to perceive in what respect it has peculiar merits for such use. The meagre citation of authorities renders it useless to the practitioner. The second is intended to be a concise statement of the common law of crimes. In both books much importance is attached to definitions which are made the basis of the text. The arrangement of the text is mechanical, rather than logical, and lacks unity.

'Bigelow on Bills and Notes' is the third contribution by the author to the excellent series of "Elementary Law Treatises" published by Little, Brown & Co., of which fourteen have now appeared. This work, like those on equity and torts by the same author, is a concise summary of the substantive law of the subject as it now exists. There is little discussion of the cases, and, excepting a very brief historical sketch in the introduction, little explanation of the growth of the law out of the custom of merchants. Strict limitations of space probably made the omission of both features necessary. Moreover, the book is designed, and is admirably adapted, to be used in connection with a selection of cases, following the order of the text. As a clear, compact, and accurate statement of the law this little book has much merit.

Prof. Isaac F. Russell has prepared a series of "outline lectures," intended "to serve as a text-book on elementary law," and published under the title 'Outline Study of Law' (New York: L. K. Strouse & Co.). They are summaries of what has been presented orally to students. They cover a wide range of subjects, from the nature of law in general to the law of divorce and crimes. In their present form it cannot be said that, even as "outlines," they deal adequately with the subjects treated. Each lecture is a mere collection of general remarks about its subject, put together without much attempt at orderly arrangement or proportion. A book on elementary law should exhibit, as far as possible, the relationship between different branches of the law, and their proper classification. In these lectures no such object has apparently been kept in view.

Theatricals: Two Comedies. By Henry James. Harper & Brothers.

In his little preface to the two comedies in this pretty volume, Mr. James says it is only fair to mention that they were conceived and constructed wholly in the light of possible representation in particular conditions which it was hoped they might successfully meet, but with which they had not the good fortune to consort. This means, presumably, that he wrote them with the intention of fitting a particular actor or a particular company, and failed to please his prospective customer. It is to be hoped that his present disappointment may prevent him from making any similar experiments in the future, for this dramatic tailoring, although it has been practised profitably by playwrights capable of better things, belongs to an inferior order of work, unworthy of men possessed of real literary ability, is seldom valuable even when most remunerative, and is an unmitigated evil, so far as the stage itself is concerned, inasmuch as it encourages players to perpetuate and intensify their own personal characteristics and mannerisms, whereas it is the first duty of a conscientious performer to strive to get rid of them. Nothing is more responsible for the present decadence of acting as an art than the system by which a handful of popular actors are enabled to play one character, or one type of character, for a long succession of years, while everybody else, in the "supporting" casts, is reduced to the lowest possible level of insignificance.

Perhaps one of the reasons why Mr. James's comedies failed to prove acceptable was that all the good things in them are not monopolized by the leading lady, but are distributed with some sense of proportion among a number of personages. But it is only fair to the managers to add that there are manifestly other difficulties in the way of a successful representation, such as a weak motive in the one case, a confused plot in the other, a lack of dramatic and theatrical action in both, and also of that sympathetic quality which is so essential, but so difficult to define or describe. Above all, the dialogue is of that polished and artificial kind which demands light, brilliant, incisive delivery if it is to be used effectively before the footlights, and which is apt to fall perfectly flat from the lips of the actors of to-day, who talk with great facility, but know little about the possibilities of speech. On the whole, Mr. James's plays are more likely to meet with judicious appreciation in their present form than if an attempt had been made to represent them upon the stage. At all events, the reader can enjoy the smoothness and neatness of their literary style, the compact and forcible expression, and the humor, which is of far finer quality than that current in the contemporary theatre, even if it is not always quite so spontaneous as it might be. They have also the rare merit of being written upon the lines of genuine comedy. Studies of life, in the fullest sense of these words, they can scarcely claim to be, for the characters are fashioned, for the most part, after very familiar stage models, and the treatment of them is governed, apparently, by no other law than that of theatrical exigency, especially in the matter of exits and entrances. But in no case does Mr. James overstep the modesty of nature. His machinery is often clumsy and his situations forced, but his incidents, although not always probable in their order or consequences, are not in themselves extravagant, while his personages conduct themselves in accordance with the rules of the society in which they are supposed to move.

Of the two plays the first, which is entitled "Tenants," is the better, although the subject is not particularly agreeable or the outcome particularly convincing. It tells the story of a retired diplomat, who, from honorable scruples, sends his legitimate son away from home rather than appear to connive at his marriage with his ward, a great heiress, but nevertheless favors the suit of his illegitimate son when the latter unexpectedly appears upon the scene with his mother. In the end the legitimate son carries the day, and the father makes reparation by marrying his former mistress. This arrangement defeats the machinations of the villain, a blackmailing captain, and is supposed to insure general peace. How such a marriage would put an end to the scandal is not explained. The second comedy, "Disengaged," is a story of serio-comic intrigue, in which a curiously inexperienced guardsman, after being captured by a match-making mamma for her insipid daughter, is rescued by a brilliant widow, who marries him herself, while the daughter is handed over to a gay young diplomat, who had conspired against his friend, the guardsman, in order to make love to a married woman. The trifle is written with much cleverness, but the plot is too involved and the final solution is not satisfactory or reasonable. Neither piece would be likely to succeed in a theatre, unless the representation were exceptionally brilliant, but both supply pleasant entertainment to the reader, and justify the hope that the author may yet produce a play whose dramatic may be equal to its literary excellence.

The Amateur Telescopist's Handbook. By Frank M. Gibson. New York: Longmans.

This work seems to be well adapted to the needs of amateur astronomers who possess only

very small telescopes. The advice and instruction, and the chapters on the history, principles, care, and testing of the telescope are valuable, since the facts here assembled have heretofore been scattered through different works. The list of 468 celestial objects seems to be a judicious selection, the objects being those which are visible with three inches of aperture at the most, and for this especial purpose they are made the more available since their alignment with the naked-eye stars is given. The criticism which the author evidently expects, and which he has discounted, is that his book will be considered useless by astronomers since it does not lead up to some line of actual research; but criticism of this nature seems captious, for it is not probable that even one in a hundred of those who cultivate "peepshow" astronomy will ever evolve a taste for real investigation. But in the development of any such, no matter how few, the curiosity-seeker renders his service to astronomy, to say nothing of the amusement and instruction which he secures for himself and affords to his friends.

It would seem, however, that criticism should be made on Mr. Gibson's estimate of the value of the small telescope to astronomy. He summarizes the matter in the following words:

"Now, it might as well be stated at once that there is scarcely a possibility in these days that an amateur with a small altazimuth telescope can accomplish any work of scientific value. . . . In earlier days, when astronomical instruments were less perfect, professional astronomers less numerous, and the magnificent observatories of modern times as yet unknown, the amateur with his little telescope might be a distinguished and valued colaborer with the professional with his not very much larger instrument. That day is past; and it is most likely that the small telescope has done all of which it is capable in the way of original scientific work."

A sentiment like this in a book otherwise so commendable is likely to borrow a semblance of authority from the company in which it finds itself, and in the interests of American astronomy it should not be allowed to pass unchallenged. The field of photometry is as wide as it ever was, and there is room here for every amateur who cares to apply himself and to learn the few simple rules which govern such work. The observation of the variable stars is to-day in the hands of the amateur astronomer, and the greater portion of this work is within the scope of the three-inch telescope. The splendid work of Sawyer on the southern stars, published within the year, which is characterized by Hill as the most important contribution to photometry of the decade, required at no time during its execution any greater optical aid than the common field-glass. The recent history of astronomy furnishes numerous instances of similar nature. The reputations of Argelander, Schönfeld, and Schmidt rest to a very large extent upon the work performed by them with the unaided eye or with exceedingly small telescopes, and the field for investigation of just such character is almost as extended as it ever was. The fact admits of no question, that there do exist to-day in astronomy fields, practically unlimited, in which the amateur, with his little telescope, can conduct investigations of the greatest value to science.

The selection of half-a-dozen telescope-makers and sellers, whose goods and whose prices are noted quite in detail, while other equally reliable firms receive only passing mention, seems to savor of discrimination against the latter which is out of place in an educational work like this; and for the same reason the paragraph which speaks of globes and planispheres merits criticism, since it neglects to mention the most recent and the best of the various forms of the latter instrument.

BOOKS OF THE WEEK.

Adams, W. T. Up and Down the Nile. Boston: Lee & Shepard. $1.25.
Blossom, Henry M., jr. The Documents in Evidence. 4th ed. St. Louis: Buxton & Skinner; New York: Baker & Taylor Co. $1.50.

Just Ready. The Only Treatise on the Subject.

THE LAW OF STRIKES, LOCKOUTS,

LABOR ORGANIZATIONS, ETC.

By THOMAS S. COGLEY, a member of the Bar of the District of Columbia, and author of Cogley's Digest.

Everybody will at once recognize the value of this book, because, notwithstanding the great importance of the subject, no attempt has heretofore been made to treat the matter exhaustively, and only fragmentary references to it are to be found in other works. This book gives all the case and statute law on the subjects of which it treats, and contains in full, or sufficiently so to answer all practical purposes, cases out of print and beyond the reach of all save those who have access to the largest libraries. It contains references to all English and American cases and statutes down to date.

COGLEY ON STRIKES AND LOCKOUTS is an attractive octavo volume of best law-book style in its make-up. Price $4.00 net by express, prepaid, on receipt of amount with order. W. H. LOWDERMILK & CO., Law-Book Publishers and Dealers, 1424-1426 F St., Washington, D. C.

To Librarians, Book-Lovers, and Booksellers.

Our NEW CATALOGUE of RARE and CHOICE BOOKS, comprising works on architecture, biography, belles-lettres, the drama, first editions, Shakespeariana, rare French Books, works of art, etc., etc., will be sent, postpaid, upon request.

☞ Attention is called to this valuable collection.

The Best Food For Children?

is worthy every parent's study; not only what they can eat, but what gives the most nourishment. No children are better, and most are worse, for eating lard-cooked food. If, however, their food is prepared with the healthful new vegetable shortening,

COTTOLENE

instead of lard, they can eat freely of the best food without danger to the digestive organs. You can easily verify this by a fair trial of Cottolene.

Sold in 3 and 5 lb. pails by all grocers.

Made only by

JUST FROM THE PRESS:

THE GOVERNORS OF VIRGINIA.

A Brief Review of the Discovery of the Continent of North America, with a History of the Executives of the Colony and of the Commonwealth of Virginia. By MARGARET VOWELL SMITH. 8vo, cloth, illustrated, 457 pages. Price, $2.50, postpaid.

The purpose of this book is to lay before the public, in a convenient form, a review of the Governors of Virginia from the establishment of the Colony to the present day.

While a history of the State is not attempted, this work may yet be considered a running commentary upon it, and a coup d'œil is offered of many important events connected with the early settlement of the country.

The foundation of the Colony of Virginia was the foundation of the United States; the two facts are one and inseparable, and every lover of America must take an equal interest and pride in both.

Various rare and explanatory State Papers are embodied in this volume, and the personal sketches are gathered from the most authentic sources.

The author has done the work from pure love of it, without thought of pecuniary compensation, and with a view only to placing so much history easily and attractively within reach of the general reader, and of those interested in the old Commonwealth. The style is smooth, terse, and clear. The book is well printed and bound, and the price a moderate one.

THE

Popular Science Monthly

FOR FEBRUARY.

New Chapters in the Warfare of Science. XIX. From Creation to Evolution. I. The Visible Universe. By ANDREW D. WHITE, LL.D.

Shows that the displacement of the theological and metaphysical ideas of creation by the evolutionary was itself an evolution in human thought.

Tyndall and his American Visit. By Miss E. A. YOUMANS.

An account of Tyndall's only trip to this country, containing hitherto unpublished letters.

Heredity in Relation to Education. By Prof. WESLEY MILLS, M.D.

Counsels teachers to look at the characteristics of the parents in order to learn how to treat their pupils.

Where Bananas Grow. Illustrated. By JAMES E. HUMPHREY.

Describes the banana plantations of Jamaica, and tells with the aid of pictures how the fruit is gathered and shipped.

EDITOR'S TABLE; LITERARY NOTICES; POPULAR MISCELLANY; NOTES.

50 cents a number; $5.00 a year.

D. APPLETON & CO., NEW YORK.

INDEX TO THE

Popular Science Monthly,

Volumes I. to XL., 1872-1892.

Compiled by FREDERIK A. FERNALD. 8vo. Cloth, $2.50.

THE POPULAR SCIENCE MONTHLY is notably a magazine whose contents are of permanent value. Any one who is reading up a subject in natural, social, or ethical science will seldom fail to find a valuable store of information among its resources. Its first twenty years form an especially important and interesting period in the spread of scientific thought and the progress of the scientific arts. As new advances have been made, they have been explained by competent writers in the MONTHLY, so that the forty volumes of the magazine form A TREASURE HOUSE OF SCIENTIFIC KNOWLEDGE. The new Index is a key to this treasure-house, and should be owned by all who possess back volumes of the magazine. Persons who depend on a public library for the use of the volumes will find it a great convenience to have the Index at home. Each alternate page is left blank, to give space for notes and additions.

For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,

D. APPLETON & CO.,

1, 3, AND 5 BOND ST., NEW YORK.

D. Appleton & Co.'s New Books.

Germany and the Germans.

By WILLIAM HARBUTT JOHNSON, author of "German Socialism and Ferdinand Lassalle," "Prince Bismarck and State Socialism," etc. 2 vols., 8vo. Cloth, $6.00.

"This excellent work—a literary monument of intelligent and conscientious labor—deals with every phase and aspect of state and political activity, public and private, in the Fatherland. . . . Teems with entertaining anecdotes and introspective *aperçus* of character."—*London Telegraph.*

"With Mr. Dawson's two volumes before him, the ordinary reader may well dispense with the perusal of previous authorities. . . . His work, on the whole, is comprehensive, conscientious, and eminently fair."—*London Chronicle.*

The Romance of an Empress.

Catherine II. of Russia. By K. WALISZEWSKI. With Portrait. 12mo. Cloth, $2.00.

"Few stories in history are more romantic than that of Catherine II. of Russia, with its mysterious incidents and thrilling episodes; few characters present more curious problems. . . . This volume, in which the Empress is the grand central figure, gives striking pictures of the condition of the contemporary Russia which she did so much to mould as well as to expand. . . . Indeed with her vices and with all her faults, as M. Waliszewski has sketched her portrait, we can hardly help liking as well as admiring her."—*London Times.*

"The author has drawn valuable materials for the elaborate review he has given us from the state papers of the Russian government, from records of distinguished Russian families which have appeared only in recent years, and from the archives of the French Foreign Office; and he has brought together and confronted most of the writers who have left us their reminiscences of the imperial potentate. . . . The industry of the author deserves the highest praise. He has left nothing undone to make his work complete, and from first to last his chapters give proof of diligent research and thorough inquiry."—*Edinburgh Review.*

General Scott.

By General MARCUS J. WRIGHT. A new volume in the Great Commanders Series, edited by General JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

General Wright's book is a work of popular interest. The subject is one of the most picturesque and impressive to be found in our military history, and the author, in availing himself of the latest authorities, has produced a book which seems likely to be accepted as a standard work in its class.

How to Study and Teach History.

With Particular Reference to the History of the United States. By B. A. HINSDALE, Ph.D., LL.D., Professor of the Science and the Art of Teaching in the University of Michigan, author of "Schools and Studies," etc. Volume 25, International Education Series. 12mo, Cloth, $1.50.

The aim of this book is practical, and it was written with particular reference to the needs of elementary and secondary teachers, although it will be found of interest and value to teachers and students of all grades. It is one of the most important and valuable volumes in the series.

A Friend of the Queen.

By PAUL GAULOT. With 2 Portraits. 12mo. Cloth, $2.00.

"M. Gaulot deserves thanks for presenting the personal history of Count Fersen in a manner so evidently candid and unbiased."—*Philadelphia Bulletin.*

"There are some characters in history of whom we never seem to grow tired. Of no one is this so much the case as of the beautiful Marie Antoinette, and of that life which is at once so eventful and so tragic. . . . In this work we have much that up to the present time has been only vaguely known."—*Philadelphia Press.*

"A historical volume that will be eagerly read"—*New York Observer.*

"One of those captivating recitals of the romance of truth which are the gilding of the pill of history."—*London Daily News.*

The Brontës in Ireland.

By Dr. WILLIAM WRIGHT. With Portraits and numerous Illustrations. 12mo. Cloth, $1.50.

"A striking contribution to biographical literature, and a significant confirmation of the doctrine of hereditary genius has been made by Dr William Wright in his wonderfully entertaining narrative. . . . The book is admirably written, and is in itself as interesting as a romance. It has a number of valuable illustrations, plans, etc., and will be of the most intense fascination to all who have read and thrilled over 'Jane Eyre' and 'Shirley,' or puzzled over the mystery of the wild and erratic Branwell."—*Boston Beacon.*

"One of the most curious pages which have lately been added to literary history."—*Boston Traveller.*

"A new and thrilling chapter in the history of the Brontë sisters."—*Boston Advertiser.*

Appletons' Hand-Book of Winter Resorts.

For Tourists and Invalids. Giving complete information as to winter sanitariums and places of resort in the United States, the West Indies, The Bermudas, The Sandwich Islands, and Mexico. New edition, December, 1893, revised to date. With Maps, Illustrations, Table of Railroad Fares, etc. 12mo. Paper cover, 50 cents.

RECENT ISSUES IN

Appletons' Town and Country Library.

Each 12mo, paper, 50 cents; cloth, $1.00.

The Nation

Is published every week at Broadway and Fulton Street. It was founded by E. L. Godkin in 1865, and Mr. Godkin is still the editor.

THE NATION is an independent weekly review of literature, science, art, and politics, with a serial commentary on the most important American and foreign events, special and occasional correspondence, editorial and miscellaneous articles on prominent political and social topics, and thoroughly competent criticism of the latest developments of literature, science, art, music and the drama. The two hundred contributors who prepare this feast for the scholar and the thinker include the foremost names in American literature and thought, besides many famous men in England and France, Germany and Italy, South America and Japan. THE NATION has been pronounced by the *Saturday Review* to be "on the intellectual level of the best European periodicals." It has a large and widely distributed circulation in all the States of the Union and in foreign ports. The development of that class of independent voters who control the balance of power in several Northern States is largely the work of THE NATION, which has always fought for purity, wisdom, and independence in public life, and for honesty and integrity in legislation.

Subscription, $3.00 a year, postpaid; shorter term at a proportionate rate.

Sample copy sent free on application.

TO ADVERTISERS.

The weekly circulation of THE NATION is about 10,000 copies. This number represents, however, but a portion of the actual readers of the journal, as it goes to all the leading libraries and reading-rooms throughout the country, and to the homes of people of intelligence and means everywhere. It stands alone in its field. The announcements of the leading publishers are a feature of THE NATION, which contains more book-advertising than any other weekly paper. Prominent financial houses, the best schools, and other high-class advertisers of all kinds use its columns constantly. The utmost care is taken to exclude all unpleasant or unworthy advertising.

Advertising rates or other information given on application.

206 to 210 Broadway, New York City.

Just Ready. The Only Treatise on the Subject.

THE LAW OF STRIKES, LOCKOUTS,

LABOR ORGANIZATIONS, ETC.

By THOMAS S. COGLEY, author of Cogley's Digest.

This book gives all the case and statute law on the subjects of which it treats. It contains references to all English and American cases and statutes down to date. It is an interesting presentation of valuable material which covers the entire ground of strikes, lockouts, boycotts, picketing, blacklisting, conspiracies, labor organizations, railroads, and all the concomitant issues connected therewith, and is so thorough in all directions as to make the reader the master of the history as well as the law of the subject.

It is an attractive 400-page octavo volume of best law-book style. Price $4.00 net by express, prepaid, on receipt of amount with order.

Charles Scribner's Sons'

NEW PUBLICATIONS.

LIFE AND LETTERS OF DEAN STANLEY.

By R. E PROTHERO, with the coöperation of Dean Bradley. With Portraits and Illustrations. 2 vols., 8vo, $8 00.

"The book in every way fulfils the anticipations that were aroused by the announcement of it, and is one of the great biographies of the day."—*Chicago Tribune.*

"One of the most important of recent books It is certainly one of the most valuable biographies of late years, and it will not be surprising to see it take rank as a standard book. The interest in it will be deep and sincere."—*Philadelphia Telegraph.*

THE PASQUIER MEMOIRS.

Edited by DUC D'AUDIFFRET PASQUIER. With Portraits. 3 vols., 8vo. Vol. I. now ready. $2.50.

"Since the record of Madame de Rémusat's observations was given to the world, no light so copious and searching has been thrown upon the Napoleonic era as is cast by this volume."—M. W. HAZLETINE *in N. Y. Sun.*

CIVILIZATION DURING THE MIDDLE AGES,

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2 50

Prof Adams is a recognized authority on mediæval history and civilization, and has produced a brilliant picture as well as a suggestive account of the conditions and characteristics of the middle ages and their gradual evolution.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

PHILOSOPHY OF HISTORY—FRANCE.

By ROBERT FLINT, D.D., LL.D , Professor of Divinity in the University of Edinburgh. 8vo, $4.00.

Dr. Flint's great work, the fruit of many years of study and research, contemplates in its entirety a history of the intellectual development of France, Germany, Italy, and England. The first of the three volumes contains an analysis and discussion of Historical Philosophy in France and in French Belgium.

PSYCHOLOGY.

Descriptive and Explanatory. A Treatise of the Phenomena, Laws, and Development of Human Mental Life. By G. T. LADD, Professor of Philosophy in Yale University. 8vo, $4 50

Prof. Ladd's works in this field are already well known, his "Elements of Physiological Psychology," in particular, being recognized as one of the most important contributions to the subject in recent years. His new book, in its originality of treatment and in its importance, is as noteworthy as anything that he has done.

SCOTT'S LETTERS.

FAMILIAR LETTERS

OF

SIR WALTER SCOTT

Edited by David Douglas. With a fine steel Portrait of Scott and an Autographic Plan of Abbotsford. 2 vols. 8vo, gilt top, $6.00.

"In perusing these fascinating pages, we seem to live Sir Walter's life over again along with him. The period covered by the two volumes extends from 1797—the date of Scott's marriage—to 1825; and when it is borne in mind that nearly all the letters here printed are for the first time revealed to general knowledge, and that they lay bare the minutest details of Sir Walter's thoughts, cares, feelings, and aspirations, it is plain that Lockhart's biography was practically unfinished without this supplement. In these pages the author of 'Waverley' and 'The Lady of the Lake' is portrayed with minutest touches by his own hand."—*Daily Telegraph* (London).

"The letters of Scott are as native to the soil as the heather which he loved. He wrote as he felt. It can be said of him with as great justice as Gibbon said of Montaigne and Sir William Temple, that his correspondence 'brings us home to the house and bosom of the author.' It may be added, with equal truth, that 'careless, inimitable beauties,' such as constituted the delight and despair of Gibbon when he read Hume's works, form the special charm of Sir Walter Scott's Letters."—*London Times.*

"The magic that clings to everything that came from the pen of the Great Unknown lies over them, and the public of to-day will read them as eagerly as the public of seventy years syne read the 'Tales of My Landlord.'"—*Pall Mall Gazette.*

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

Needs Shortening

So do all cooks; and the puzzle for every one of them has been how to avoid sodden pastry. The problem has now been solved by the

NEW VEGETABLE SHORTENING

Cottolene

which makes light, crisp, wholesome and easily digested pastry. The most famous cooks in the country say so, and you will also after a fair trial. Make it now.

Sold in 3 and 5 lb. pails by all grocers.

Be sure you get the genuine.

G. P. Putnam's Sons

NEW YORK AND LONDON,

HAVE NOW READY:

THE WRITINGS OF THOMAS PAINE.

Political, Sociological, Religious, and Literary. Edited by Moncure Daniel Conway. With Introduction and Notes. To be complete in four volumes, uniform with Mr. Conway's "Life of Paine." Price per volume, $2.50.

Volume I. now ready.

The first volume covers the period of the American Revolution, beginning with the year 1775. It will therefore open with Paine's anti-slavery essay and his philosophical or moral essays, while editing the Pennsylvania Magazine, these being followed by the great revolutionary, political, and controversial pamphlets which made such a profound impression on the country.

The second volume will consist mainly of the "Rights of Man," and pamphlets relating to English politics, but will also contain certain papers on French affairs.

The third and fourth volumes will consist mainly of Paine's religious writings, but will also contain some essays relating to American affairs, written in his last years. At the close will be given Paine's poems.

The Religion of a Literary Man.

By RICHARD LE GALLIENNE. 12mo, $1.00.

"Mr. Le Gallienne has produced a book well worth reading, particularly (so at least we should say) by those who are most disposed to differ with him, . . . The author treats of the hereafter with great courage, and says a good many things well worthy of the utmost attention. . . . The book is certainly a remarkable one, and we urge our readers not to trust to any second-hand account, but to make themselves acquainted with its contents by the ancient method of perusal."—*London Speaker.*

"Probably the sunniest book on religion ever published."—*London Star.*

The Story of Japan.

By DAVID MURRAY. (Being a new number of the Stories of the Nations Series). 12mo, illustrated, cloth, $1.50; half leather, gilt tops, $1.75.

Authors and Their Public in Ancient Times.

A sketch of literary conditions, and of the relations with the public of literary producers from the earliest times to the invention of printing in 1450. By GEO. HAVEN PUTNAM, author of "The Question of Copyright," etc. 12mo, $1.50.

"The Knickerbocker Press appears almost at its best in the delicately simple and yet attractive form which it has given to this work, wherein the chief of a celebrated publishing house sketches the gradual evolution of the idea of literary property . . . The book abounds in information, is written in a delightfully succinct and agreeable manner, with apt comparisons that are often humorous, and with scrupulous exactness to statement, and without a sign of partiality either from an author's or a publisher's point of view."—*New York Times.*

READY NEXT WEEK.

The Writings and Correspondence of Thomas Jefferson.

Edited by PAUL LEICESTER FORD. Uniform with the sets of the "Writings" of "Hamilton," "Franklin," "Washington," and "Jay." To be complete in 10 vols., 8vo, half leather, gilt tops. The set, $50.00.

Volume III. now ready.

Limited edition, 750 copies, printed from type; but a few sets remain for subscribers.

"The importance of the edition does not lie wholly in the form in which it is published or in the care with which the contents have been brought together and annotated. Mr. Ford has included in it a large mass of matter either new to print or new to an edition of Jefferson's writings."—*New York Times.*

*** *Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

Recent Important Publications in FINANCE AND ECONOMICS

The Tariff History of the United States, 1789-1888.

By Prof. F. W. TAUSSIG of Harvard University. Completing the narrative down to 1892. 12mo, $1.25.

The Silver Situation in the United States

(Questions of the Day Series, No. 74.) By Prof. F. W. TAUSSIG of Harvard University. 8vo, cloth, 75 cents.

"Professor Taussig is already well known by his admirable 'History of the United States Tariff,' and at a time when currency problems are attracting attention in Europe, Asia, and America, the appearance of a treatise from his pen on the history of silver in the United States during the last decade is peculiarly opportune." *London Times.*

The Distribution of Products;

Or the Mechanism and Metaphysics of Exchange. Three Essays: What Makes the Rate of Wages? What is a Bank? The Railway, the Farmer, and the Public. By EDWARD ATKINSON, LL.D. Second Edition, much enlarged. 8vo, cloth, $1.50.

"The volume deserves strong and hearty commendation, should be read by voters generally, and ought to be circulated among discontented workingmen as far as possible."—*Christian Intelligencer.*

Taxation and Work.

A Series of Treatises on the Tariff and the Currency. By EDWARD ATKINSON, LL.D. 12mo, $1.25.

The Industrial Progress of the Nation,

Consumption Limited; Production unlimited; By EDWARD ATKINSON, LL.D. 8vo, cloth, $2.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

Prisoners and Paupers.

A study of the Abnormal Increase of Criminals and the Public Burden of Pauperism in the United States; with a Consideration of the Causes and Remedies. By HENRY M. BOIES, M.A. 8vo, illustrated, $1.50.

"Whether or not his conclusions be entirely accepted, the material he supplies for the intelligent discussion of the problem is of the highest importance and interest." —*Detroit Free Press.*

The Relation of Labor to the Law of To-day.

By LUJO BRENTANO, Professor of Political Economy in the University of Berlin. Translated from the German, with Introduction, by Porter Sherman, M.A. 12mo, $1.50.

The Corporation Problem.

A treatise on the public phases of Corporations; their uses, abuses, benefits, dangers, wealth, and power, with a discussion of the social, industrial, economic, and political questions to which they have given rise. By WILLIAM W. COOK of the New York Bar. 12mo, $1.50.

Chapters on the Theory and History of Banking.

By Prof. CHARLES F. DUNBAR of Harvard University. 12mo, $1.25.

Economic and Industrial Delusions.

A Discussion of the Case for Protection. With Explanatory Charts. By ARTHUR B. and HENRY FARQUHAR. 8vo, $1.50.

The Economy of High Wages.

An Inquiry into the Comparative Methods and the Cost of Production in Competing Industries in America and in Europe. By J. SCHOENHOF, late U. S. Consul and Special Commissioner Department of State, U. S. A., for Inquiry into the Economy of Production and Technical Education in Europe. With a Preface by the Hon. Thomas F. Bayard, late Secretary of State, U. S. A. (Questions of the Day Series, No. 73.) $1.50.

Who Pays Your Taxes?

A consideration of the Question of Taxation. By DAVID A. WELLS, JULIEN T. DAVIES, THOMAS G. SHEARMAN, JOSEPH DANA MILLER, BOLTON HALL, and others. Edited by Bolton Hall, and issued on behalf of the New York Tax Reform Association. (Questions of the Day Series, No. 71.) With Frontispiece, $1.25.

MACMILLAN & CO.'S NEW BOOKS.

JUST PUBLISHED. PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY;

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. $5.00.

*** In this work the author embodies the result of attempts he has recently made to ascertain "the early astronomical views of the Egyptians by a study of their temples, and the mythology connected with the various cults." Full of striking fact and suggestion in what is a new field of inquiry, it appeals alike to the student of astronomy, archæology, and mythology, as well as to readers taking only a general interest in these subjects.

Professor Tarr's New Book.

Economic Geology of the United States.

MACMILLAN & CO., 66 Fifth Avenue, New York.

J. SELWIN TAIT & SONS

A NOTABLE BOOK.

MEMOIRS OF

ANNE C. L. BOTTA.

Written by her friends. With selections from her correspondence and from her writings in prose and poetry.

EDITED BY

PROFESSOR VINCENZO BOTTA.

A limited edition, printed on Holland paper with gilt top and untrimmed edges. Engraved portrait of Mrs. Botta. Cloth, 8vo, 475 pp., $3.50.

An extraordinary tribute, and one that could not have been called forth by any ordinary character. Mr. James Anthony Froude, Mr. Parke Godwin, Mrs. Julia Ward Howe, Mr. E. C. Stedman, Mr. Charles Dudley Warner, Miss Kate Field, Miss Kate Sanborn, Mr. John Bigelow, Miss Edith M. Thomas, Mr. Richard Watson Gilder, Mrs. Mary Mapes Dodge, Mr. Moncure D. Conway, Mr. Justin McCarthy, and many more have contributed these memoirs.—*The New York Sun.*

There is a touching charm about many of these memoirs; they glow with the splendor of lofty and real attachment, and they pulsate with generous and responsive life as do hearts. . . . For nearly two generations Mrs. Botta was a conspicuous force and figure in the social and intellectual life of this city. When she died, Julia Ward Howe remarks, "All her friends remain her debtors." . . . Andrew D. White quotes Horace Greeley, who said: "Anne Lynch is the best woman God ever made." . . . Froude declares that while he lives he can never cease to remember her. . . . Charles A. Peabody will remember her "as a benefactor so long as memory shall continue to serve me."—*New York Times.*

CHARLES SCRIBNER'S SONS' NEW BOOKS.

Life and Correspondence of Dean Stanley.

By R. E. PROTHERO.

With the co-operation of DEAN BRADLEY. With Portraits. 2 vols., 8vo, $8.00.

The striking personality of Dean Stanley and his preëminence in the ecclesiastical, literary, and social history of his time, give to this biography a special value and importance. Based upon Dean Stanley's voluminous correspondence, the work is complete, thorough, and authoritative.

"The book in every way fulfils the anticipations that were aroused by the announcement of it, and is one of the great biographies of the day."—*Chicago Tribune.*

"Stanley's personality breaks out on every page where letters are given, and often in the mere narrative of facts, so strenuous was he and so much alive."—*G. W. S., in N.Y. Tribune.*

"It presents a great career with desirable fulness and in a literary form intensely attractive."—*Boston Advertiser.*

"The two volumes are of almost fascinating interest"—*London Standard.*

"One of the most valuable biographies of late years."—*Philadelphia Telegraph.*

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well-nigh indispensable."—*Boston Journal.*

"Should take its place with the great biographies of the world."—*N. Y. World.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

"Their biographical interest and value are beyond all praise."—*Pall Mall Gazette.*

THE SWINE AND THE FLOWER.

I shrank to meet a mud-encrusted swine,
And then he seemed to grunt, in accents rude,
"Huh! Be not proud, for in this fat of mine,
Behold the source of richness for your food!"

I fled, and saw a field that seemed, at first,
One giant mass of roses pure and white,
With dewy buds 'mid dark green foliage nursed,
And, as I lingered o'er this lovely sight,
The summer breeze that cooled that southern scene
Whispered, "Behold the source of Cottolene!"

SHORTENING

when 'tis *done*, 'twill be *better done* as well as *more quickly done* if you use

Cottolene

The Vegetable Shortening.

It is purer than lard; it is without the objectionable flavor of lard; it heats quicker than lard; it browns better than lard, and does not make food greasy and indigestible as lard does.

Ask your grocer for Cottolene, and accept no imitations. Sold everywhere in three and five pound pails.

GINN & COMPANY PUBLISH

FOR ALL INTERESTED IN POETRY:

A Primer of English Verse. By Prof. HIRAM CORSON of Cornell University. 232 pages. $1 10.

The leading purpose of the volume is to introduce the reader to the æsthetic and organic character of English verse—to cultivate his susceptibilty to verse as an inseparable part of poetic expression.

A Hand-Book of Poetics. By FRANCIS B. GUMMERE, Professor of English Literature in Haverford College. x+250 pages. $1.10.

The book has three divisions—Subject-Matter, Style, Metre. Each is treated from two points of view—the historical, tracing the growth of different kinds of subject, of expression, or of rhythm; and the theoretical, stating clearly the principles and laws of the matter discussed.

Sidney's Defense of Poesy. Edited by Prof. ALBERT S. COOK of Yale University. xlvi+103 pages. 90 cents.

As a classic text-book of literary æsthetics, Sidney's *Apologie for Poetrie* has enduring value and interest for every student of language and poetics

Shelley's Defense of Poetry. Edited by Prof. COOK. xxvi+86 pages. 60 cents

Shelley's *Defense* may be regarded as a companion piece to that of Sidney, and a comparison of the two essays is of the greatest interest to students of historical English style. *The Four Ages of Poetry*, by Thomas Peacock, is also contained in this volume.

Cardinal Newman's Essay on Poetry. With reference to Aristotle's Poetics. Edited by Prof. COOK. x+36 pages. 35 cents

This *Essay* is valuable, not only as a notable example of the literary work of one who has been considered the greatest master of style in this generation, but also for the author's presentation of Aristotle's ideas.

Addison's Criticisms on Paradise Lost. Edited by Prof. COOK. xxiv+200 pages. $1.10

The text of this edition is based upon the literal reproductions of Arber and Morley, and, allowing for the modernization of spelling and punctuation, is believed to be more correct than any published in this century.

The Art of Poetry. The Poetical Treatises of Horace, Vida, and Boileau, with the translations by Howes, Pitt, and Soame. Edited by Prof. COOK. 214 pages. $1 25.

This volume contains the Latin, Italian, and French originals, with the standard English metrical translations. A full index and a topical analysis of the three-fold work greatly enhances its value.

Characteristics of the English Poets, from Chaucer to Shirley. By WILLIAM MINTO. $1.65.

What is Poetry? By LEIGH HUNT. Edited by Prof. COOK. vi+98 pages. 60 cents.

One of the most delightful short papers on the subject of poetry.

Dante Handbook. By GIOVANNI A. SCARTAZZINI. Translated from the Italian, with Notes and Additions, by Thomas Davidson, M A. $1 25

This Handbook, written by the first of living Dante scholars, contains everything necessary to enable the student to study intelligently the supreme Christian poet—"The voice of ten silent centuries." It is divided into two parts, the first treating of Dante's Life, the second of his Works. To every section is appended a valuable Bibliography.

Introduction to the Poetry of Robert Browning. By Prof. W J ALEXANDER of University College, Toronto. $1.10.

"I think your estimate of Browning and your analysis of his limitations and their causes are the best and truest yet made."—*F. J. Furnivall, LL D., Founder of the original "Browning Society."*

IN PRESS:

In the Athenæum Press Series.

Old English Ballads. Edited by F. B. GUMMERE of Haverford College.

A Book of Elizabethan Lyrics. Edited by F. E. SCHELLING of the University of Penns lvania.

Selections from Gray. Edited by W. L. PHELPS of Yale University.

Any of the above books sent, postpaid, on receipt of price. Special terms for class use.

We have an announcement in the *Nation* every week, here or just after Schools.

Ginn & Co., Publishers, Boston, New York, Chicago, London

LONGMANS, GREEN, & CO.'S NEW PUBLICATIONS.

DISCOVERY OF LAKES RUDOLF AND STEFANIE:

A Narrative of Count Samuel Teleki's Exploring and Hunting Expedition in Eastern Equatorial Africa in 1887 and 1888.

By his companion, Lieutenant LUDWIG VON HÖHNEL. Translated by NANCY BELL (N. D'Anvers), author of "Heroes of African History," "Art Guide to History," etc., etc. With 179 original Illustrations and 5 colored Maps giving Route of Expedition, Altitudes of Camping-Places, Mountains, etc., Nature of Surrounding Country, etc. 2 vols., 8vo, $12.00.

LEONIDAS POLK,

Bishop and General.

By WILLIAM M. POLK, M.D., LL.D.

With 4 Maps in the Text and 5 Folders, 2 full-page Illustrations, and 4 Steel Plates.

In 2 volumes. Crown 8vo, cloth, gilt top, $4.00.

"Perhaps our civil war had on neither side a more interesting and picturesque figure than Bishop Leonidas Polk, who throughout the greater part of the war was one of the Confederate military leaders . . . The career of General Polk has found a worthy memorial in the biography by his son, Dr. William M. Polk of this city.

The book is an admirable representation of a simple, sincere, and powerful character. It contains three pictures of Polk, which are of themselves significant. . . . The sketch given of the life and work of Polk as Missionary Bishop of the Southwest is highly instructive, and is, at the same time, a delightful picture of a very peculiar society. . . . Many interesting g impses of the war and of war days are to be found in these volumes. There is an account of an interview of Polk with General Grant about an exchange of prisoners." . . . —*N. Y. Times.*

Longmans' Civil Engineering Series

Edited by the author of "Notes on Building Construction."

TIDAL RIVERS:

Their Hydraulics, Improvement, and Navigation. By W. H. WHEELER, M. Inst. C.E., author of "The Drainage of Fens and Low Lands by Gravitation and Steam Power." With Illustrations. Medium 8vo, $5.00 *net.*

*** Other volumes of the Series are in preparation.

MINING:

An Elementary Treatise on the Getting of Minerals. By ARNOLD LUPTON, M.I.C.E., F.G.S., etc., Mining Engineer, Certificated Colliery Manager, Surveyor, etc., Professor of Coal Mining at the Victoria University, Yorkshire College, Leeds, etc. With 596 Diagrams and Illustrations. Crown 8vo, $3 00 *net.*

MINING ROYALTIES:

Their Practical Operation and Effect. By CHARLES ASHWORTH JAMES. Crown 8vo, $1.75.

AGRICULTURAL ANALYSIS.

A Manual of Quantitative Analysis for Students of Agriculture. By FRANK I. ADDYMAN, B.S.C. (Lond.), F.I.C. Crown 8vo, $1.75.

PRACTICAL AGRICULTURAL CHEMISTRY

FOR ELEMENTARY STUDENTS. Adapted for Use in Agricultural Classes and Colleges. By J. BERNARD COLEMAN and FRANK T. ADDYMAN. 12mo, 50 cents, *net.*

CELESTIAL OBJECTS FOR COMMON TELESCOPES.

By the Rev. T. W. WEBB, M.A., F.R.A.S., Vicar of Hardwick, Herefordshire. Fifth Edition, revised and greatly enlarged by the Rev. T. E. ESPIN, M.A., F.R.A.S.. (2 vols). Vol. I. (Part I. The Instrument and the Observer. Part II. The Solar System) now ready. With Portrait and a Reminiscence of the Author, 2 Plates, and numerous Illustrations. Crown 8vo, $1.75.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th St., New York.

The Cassell Publishing Co.

HAVE JUST ISSUED:

A REMARKABLE BOOK.

A SUPERFLUOUS WOMAN.

1 vol., 12mo, extra cloth, $1.00.

Will create as much of a sensation as the "Heavenly Twins."

By MARION HARLAND.

Mr. WAYT'S WIFE'S SISTER.

By MARION HARLAND (Mrs. Mary Virginia Terhune), author of "Common Sense in the Household," etc., etc. 1 vol., 12mo, extra cloth, $1.00.

By W. CLARK RUSSELL.

THE EMIGRANT SHIP.

By W. CLARK RUSSELL, author of "List, ye Landsmen!" "The Romance of a Transport." 1 vol, 12mo, extra cloth, $1.00.

By J. COMPTON RICKETT.

QUICKENING OF CALIBAN.

A Modern story of evolution. By J. COMPTON RICKETT, author of "The Christ that is to Be." 1 vol., 12mo, extra cloth, laid paper, etc., $1.00.

"It deals with some of the more modern theories of evolution, and does this in a thoroughly interesting manner."—*Boston Daily Advertiser.*

"The story is a very strange one, and will doubtless be widely read. There are strong characters in addition to the leading ones, and incidentally the shams of London society and intellectual life are cleverly revealed."—*Boston Times.*

"Brimful of meaning, suggestion, and fine satire."—*London Academy.*

"Since Mr. Grant Allen's well-known study of the Rev. John Creedy, we have scarcely come across so remarkable a book as the present—in which the author of that original and unusual book, 'The Christ that Is to Be,' has given us a second proof of his originality and power."—*The Bookseller (London).*

By WILLIAM H. BEARD.

ACTION IN ART.

With over two hundred and twenty illustrations from the original drawings by the author. 1 vol., 8vo, extra cloth, gilt top, etc., $2.00.

Prof. H. BLÜMNER.

HOME LIFE OF THE ANCIENT GREEKS.

Translated from the German of Prof. H. BLÜMNER by Alice Zimmern. With numerous illustrations. 1 vol., 8vo, extra cloth, etc., $2.00.

By HENRY MORLEY, LL.D.

ENGLISH WRITERS.

An attempt towards a History of English Literature.

Now ready, Vol. X., SHAKESPEARE AND HIS TIME: UNDER ELIZABETH. 1 vol, 12mo. extra cloth, etc., $1.50.

By SARAH GRAND.

THE HEAVENLY TWINS.

In one large 12mo volume of nearly 700 pages. Extra cloth, $1.00.

"A dangerous and difficult subject for a novel."—*The American Woman's Illustrated World.*

*** At no time since the publication of this book, although edition after edition has come from the press, have the publishers been able to supply the demand for this remarkable volume. It is without question the great success of the year.*

HISTORY OF THE CAMPAIGN

FOR THE

Conquest of Canada

IN 1776,

From the Death of Montgomery to the Retreat of the British Army under Sir Guy Carleton.

By CHARLES HENRY JONES.

1 vol., 8vo, cloth, 234 pages. 8 full-page portraits of Revolutionary Generals. Gilt top, untrimmed edges. Published by Porter & Coates at $3.00. Our price, 75 cents; postage, 17 cents.

Of the military movements on the Northern frontier during the Revolution, much has been written about the campaign of Montgomery in 1775, which terminated in his untimely death on the last day of that year. Much has also been written about the disastrous campaign of Burgoyne in 1777. The same attention has not been paid to the events of the intervening year of 1776, which, though less striking in their effects, were of the greatest importance to the cause. There is not anywhere, so far as we are aware, any detailed account of that long and severe campaign. Its salient features have been noticed by all historians in passing, and some of them have dwelt upon it with more or less minuteness, but we have nowhere been able to find a connected, reliable, and circumstantial narration of all its interesting and often distressing events. Such a history the author has given us in this book.

Charles Scribner's Sons' Standard New Books

SECOND EDITION NOW READY.

LIFE AND CORRESPONDENCE OF DEAN STANLEY.

By R. E. PROTHERO.

With the Co-operation of DEAN BRADLEY.

With Portraits and Illustrations.

2 vols., 8vo, $8.00.

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well nigh indispensable."—*Boston Journal.*

"Should take its place with the great biographies of the world."—*N. Y. World.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

"Their biographical interest and value are beyond all praise."—*Pall Mall Gazette.*

"One of the great biographies of the day."—*Chicago Tribune.*

"It presents a great career with desirable fulness, and in a literary form intensely attractive."—*Boston Advertiser.*

"One of the most valuable biographies of late years."—*Philadelphia Telegraph.*

THE PASQUIER MEMOIRS.

Edited by DUC D'AUDIFFRET-PASQUIER. With Portraits. In 3 vols., 8vo. Vol. I. now ready. $2.50.

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period. Pasquier's account of the Empire is surely one of the best that any contemporary has left us. It will be found rich in material concerning the imperial régime, and in portraits of Napoleon's family and associates."—*Atlantic Monthly.*

"Pasquier lived through the Revolution, the Consulate, the Empire; he held office under every régime; he became the Chancellor of France; he was intimate with Napoleon and Talleyrand—in short, of all Frenchmen save Talleyrand himself, he was the best equipped to write the history of his time. How well he has done this it is as yet too early to say; but he has done it admirably should the remaining two volumes of the work equal in interest the first, now before us."—*Philadelphia Press.*

PHILOSOPHY OF HISTORY—FRANCE.

By ROBERT FLINT, D.D., LL.D., Professor in the University of Edinburgh, author of "Theism," "Anti-Theistic Theories," etc. 8vo, $4.00.

"The volume makes up a large octavo of 705 pages, and is replete in interest to the philosophical student of history. It is both historical and critical, and it aims to show the rise and progress of reflection and speculation in human developments. It is a valuable and entertaining book. The thoughtful scholar will find the volume a rich mine of thought."—*Chicago Inter Ocean.*

CIVILIZATION DURING THE MIDDLE AGES.

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

"This volume, we are confident, will be found one of the notable books of the year just begun. Professor Adams proceeds on the assumption that the facts of history are known. It is with the sequence and philosophy of these facts he deals, and it is here that his work has its great value."—*Boston Daily Advertiser.*

REMBRANDT: HIS LIFE, HIS WORK, AND HIS TIME.

By EMILE MICHEL. Edited by Frederic Wedmore. With more than 320 Photogravures, colored Plates, and text Illustrations. 2 vols., royal 8vo, $15.00.

"Let us say at once that the book is admirable, and, considering what it contains, astonishingly cheap. M. Michel is one of the leading authorities on Rembrandt and his works, and has written a monumental, and, we should think, nearly definitive life. Hardly too much can be said in praise of the illustrations."—*The Nation.*

MEN, WOMEN, AND BOOKS.

By AUGUSTINE BIRRELL. 16mo, uniform with "Obiter Dicta." $1.00.

"Augustine Birrell has won for himself an enviable reputation as an essayist, and his new volume will add to it. His pen sketches are wonderfully graphic."—*Boston Advertiser.*

OBITER DICTA SERIES.- **Obiter Dicta,** by AUGUSTINE BIRRELL. First and Second Series, each 16mo, $1.00; **Res Judicatae,** by AUGUSTINE BIRRELL, 16mo, $1.00; **Letters to Dead Authors,** by ANDREW LANG, 16mo, $1.00; **Views and Reviews,** by W. E. HENLEY, 16mo, $1.00; *Just Ready:* **Stelligeri, and Other Essays Concerning America,** by BARRETT WENDELL, 16mo, $1.25.

By R. S TARR, B.S , F.G S.A., Assistant Professor of Geology at Cornell University. 8vo, cloth, $4 00.

The Study of the Biology of Ferns by the Collodion Method.

For Advanced and Collegiate Students. By GEORGE F. ATKINSON, Ph B , Associate Professor of Cryptogamic Botany in Cornell University. 8vo, cloth, $2 00.

PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY:

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. $5.00.

*** In this work the author embodies the result of attempts he has recently made to ascertain "the early astronomical views of the Egyptians by a study of their temples, and the mythology connected with the various cults." Full of striking fact and suggestion in what is a new field of inquiry, it appeals alike to the student of astronomy, archæology, and mythology, as well as to readers taking only a general interest in these subjects.

ENGLAND'S STORY BRIEFLY TOLD.

History of England and the British Empire.

A Record of Constitutional, Naval, Military, Political, and Literary Events from B. C. 55 to A. D. 1890, by EDGAR SANDERSON, M.A., late scholar of Clare College, Cambridge, author of "Outlines of the World's History," etc. With tinted maps and genealogical tables. In one handsome 8vo volume, 1,134 pp., cloth, price, $3.00. (*Just ready.*)

No one of the various departments of National Life which in the sum make history, has been ignored; Literature, Science, Art, Commerce, and Geographical discovery have all come under review. An excellent series of specially prepared maps, showing the great territorial changes at different times, are placed at appropriate dates throughout.

"Mr. Sanderson has tried, he says, to make his history interesting. In this effort he has met with a surprising degree of success."—*The N. Y. Times.*

"It is to his credit that he treats the subject with breadth and does not sink Colonial topics into abeyance. . . . One glides as through the pages of a novel over this chronicle of national progress."—*Public Ledger, Phila.*

A New Novel in "The Tavistock Library."

A Liberal Education

By Mrs. GEORGE MARTYN. Pocket size, cloth, 75 cents; paper cover, 50 cents.

"It seems not unlikely that if Mr. Ruskin had ever read 'A Liberal Education' he might have found for it some of the praise he once dealt with such lavish hands to 'Francesca's' sketches. . . . One puts the little volume down with the pleasant sense of having been not unprofitably entertained."—*The Nation, N. Y.*

SURBRUG, 159 Fulton St., N. Y. City.

G. P. Putnam's Sons,

NEW YORK AND LONDON,

HAVE NOW READY:

The Christian Recovery of Spain.

Being the Story of Spain from the Moorish Conquest to the Fall of Grenada (711–1492 A. D.). By H. E. WATTS. (No. XXXIX. in the "Story of the Nations" Series.) 12mo, cloth, illustrated, $1.50; half leather, $1.75.

Ships that Pass in the Night.

A Novel. By BEATRICE HARRADEN. 16mo, $1.00.

"Ships that pass in the night, and speak each other in passing,
Only a signal shewn, and a distant voice in the darkness;
So, on the ocean of life we pass and speak one another,
Only a look and a voice, then darkness again and silence."

A story of exceptional power and originality, which has attracted wide attention from thoughtful readers in Great Britain, and which is assured of a favorable reception from similar circles on this side of the Atlantic.

Primary Elections.

A study of methods for improving the basis of party organization. By DANIEL S. REMSEN. (Being No. 77 in the "Questions of the Day" Series.) 12mo, cloth, 75 cents.

NEARLY READY:

A History of Social Life in England.

A record of the progress of the people in religion, laws, learning, arts, science, literature, industry, commerce, and manners, from the earliest times to the present date. Edited by H. D. TRAILL, D.C.L. The work is to be completed in about six volumes.

Vol. I. From the Earliest Times to the Accession of Edward I. 8vo. $3.50.

"It has been primarily designed," says the editor, "to supply a clear and consecutive account of the progress of the people of England in the several departments and activities of human life. The subjects considered have been so framed and the material so arranged that the work can be read with pleasure and instruction by the general reader interested simply in the wonderful story unfolded by it, while it has been planned expressly with reference to the requirements of students engaged in the investigation of the history of English letters and learning, English art and science, English industry and commerce."

The Evolution of Woman.

An inquiry into the dogma of her inferiority to man. By ELIZA BURT GAMBLE. 12mo, cloth, $1.75.

**** Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

Historical and Biographical SKETCHES.

By Hon. SAMUEL W. PENNYPACKER,

One of the Judges of the Philadelphia Bench. 1 vol., 8vo, cloth, 416 pages; untrimmed edges. Published at $2.50. We bought the remainder of the edition, consisting of comparatively few copies, and are able to sell it for $1.00. Postage, 18 cents.

From the Author's Preface.

"About ten years ago I formed the design of writing the history of the Mennonites in America. It was for many reasons a task of extreme difficulty. It required a preliminary knowledge of the German and Dutch languages. No collection of their books had ever been made in this country, nothing of value had been published concerning them except some papers in the 'Pennsylvania Dutch,' which were descriptive rather than historical, and the structure had to be erected from its foundation. More than all, the conviction entertained by them that fame is only one of the vanities and the desire for it but a form of worldliness, has led them in the past to destroy, rather than to preserve, those materials which are the ordinary sources of historical information. When a book was written the name of the author did not appear; when a meeting-house was built, no tablet told the date; and when a man was buried no stone was raised to his memory. These difficulties and the exacting demands of a professional life have so far retarded, if not prevented, the completion of the design, and the results up to the present time have been a somewhat full collection of their books and manuscripts, and the first seven papers gathered into this volume.

"Though a torso, I believe the work, so far as it has gone, to be thorough, and if it should not progress to the end I shall at least have the satisfaction of having contributed something to the history of a people who are in every way worthy of the most careful study, and who will sooner or later attract wide attention.

"The circumstances under which the other papers were written are for the most part explained in the notes accompanying them. All those which have heretofore appeared in the magazines of the day are so described in the sub-titles, and they have all been here corrected and enlarged. Full credit has been given in the notes and elsewhere for the use made of the labors of other investigators."

CONTENTS.

1. The Settlement of Germantown, Pa., and the Causes which Led to It.
2. David Rittenhouse, the American Astronomer.
3. Christopher Dock, the Pious Schoolmaster on the Skippack, and his Works.
4. Der Blutige Schau-platz, oder Martyrer Spiegel. Ephrata, Pa., 1748. A Noteworthy Book.

Exhibition of rare books; two galleries of paintings. Admission free; no tickets required.

The Best Food For Children?

is worthy every parent's study; not only what they can eat, but what gives the most nourishment. No children are better, and most are worse, for eating lard-cooked food. If, however, their food is prepared with the healthful new vegetable shortening,

COTTOLENE

instead of lard, they can eat freely of the best food without danger to the digestive organs. You can easily verify this by a fair trial of Cottolene.

Sold in 3 and 5 lb. pails by all grocers.

Made only by The N.K.Fairbank Company,

Chicago, Boston, New York, St. Louis, Montreal, Philadelphia, San Francisco.

THE

Popular Science Monthly

FOR MARCH.

Abolish all Prohibitive Liquor Laws By APPLETON MORGAN.

A severe arraignment of prohibition. Declares prohibitory laws to be ineffectual and inexpedient, and as standing in the way of real remedies for intemperance.

Prof. Tyndall. By THOMAS H. HUXLEY.

The scientist as a man and a friend. Recollections of a long intimacy.

The Origin of Righthandedness. By Prof. J. MARK BALDWIN.

Are we born right-handed, or are we made so? This article contains the results of experiments upon the author's infant daughter, relating to the spontaneous use of the hands.

OTHER ARTICLES ON

INDUSTRIES OF ANIMALS. By Frederic Houssay (Illustrated); FOSSIL MAN. By John G. Rothermel (Illustrated); THE EUROPEAN LAW OF TORTURE. By Amherst W. Barber; CUSTOMS AND SUPERSTITIONS OF THE MAYAS. By Mrs. A. D. Le Plongeon (Illustrated); BIOLOGY AND ETHICS. By Sir James C. Browne, M.D., F.R.S.; THE ACTION OF MASSAGE UPON THE MUSCLES. By D. Graham, M.D.; THE ICE AGE AND ITS WORK. I. By A. R. Wallace, F.R.S.; THE FOUNDER OF THE FIRST SCIENTIFIC JOURNAL. By M. J. Boyer; SKETCH OF JEAN MARTIN CHARCOT (with Portrait).

50 cents a number; $5.00 a year.

D. APPLETON & CO.,
NEW YORK.

D. Appleton & Co.'s New Books.

The Story of the Sun.

By Sir ROBERT S. BALL, F.R.S., author of "An Atlas of Astronomy," "The Cause of an Ice Age," etc. 8vo. Cloth, $5.00.

"All in all, this work is most complete and satisfactory. It fills a want which has been felt by many persons, and fills it acceptably."—*N. Y. Times.*

"Like the author's previous works, it is almost entirely devoid of mathematics, while revealing in every page the hand of the master of his science. Instead, it presents in a beautifully clear and logical form the results of the labors of astronomers, mathematicians, and physicists in their discoveries of the character, size, movements, and power of the great ruler of the day."—*Philadelphia Ledger.*

"As a specimen of the publisher's art it is superb. It is printed on paper which entices the reader to make marginal notes of reference to other books in his library, the type is large, the binding is excellent, and the volume is neither too large nor too small to handle without fatigue."—*N. Y. Herald.*

Science and Hebrew Tradition.

By THOMAS H. HUXLEY. The fourth volume of the author's Collected Essays. 12mo. Cloth, $1.25.

CONTENTS.—On the Method of Zadig. The Rise and Progress of Palæontology. Lectures on Evolution. The Interpreters of Genesis and the Interpreters of Nature. Mr. Gladstone and Genesis. The Lights of the Church and the Light of Science. Hasisadra's Adventure. The Evolution of Theology.

The Fauna of the Deep Sea.

By SYDNEY J. HICKSON, M.A., Fellow of Downing College, Cambridge. A new volume in the Modern Science Series, edited by Sir John Lubbock, Bart. With 23 Illustrations. 12mo. Cloth, $1.00.

"Our present-day knowledge of the physical conditions of the bottom of the deep sea and the animals that dwell there is by no means inconsiderable. . . . It is the object of this little book to bring together in a small compass some of the more important facts and considerations, and to present them in such a form that they may be of interest to those who do not possess a specialist knowledge of genera and species."—*From the Preface.*

A History of Germany,

From the Earliest Times to the Present Day. By BAYARD TAYLOR. With an Additional Chapter by MARIE HANSEN-TAYLOR. With Portrait and Maps. 12mo. Cloth, $1.50.

This standard popular history of Germany has been carefully revised and brought down to date Its value for general readers and for the higher grade of schools and for colleges has been generally recognized.

The Orthoepist:

A Pronouncing Manual, containing about Four Thousand Five Hundred Words, including a considerable number of the Names of Foreign Authors, Artists, etc., that are often mispronounced. By ALFRED AYRES, author of "The Verbalist," etc. Revised and Enlarged Edition. 18mo. Cloth, $1.25.

Germany and the Germans.

By WILLIAM HARBUTT DAWSON, author of "German Socialism and Ferdinand Lassalle," "Prince Bismarck and State Socialism," etc. 2 vols., 8vo. Cloth, $6.00.

"This excellent work—a literary monument of intelligent and conscientious labor—deals with every phase and aspect of state and political activity, public and private, in the Fatherland. . . . Teems with entertaining anecdotes and introspective *aperçus* of character."—*London Telegraph.*

"With Mr. Dawson's two volumes before him, the ordinary reader may well dispense with the perusal of previous authorities. . . . His work, on the whole, is comprehensive, conscientious, and eminently fair."—*London Chronicle.*

Natural Resources of the United States.

By JACOB HARRIS PATTON, A.M., Ph.D., author of "Four Hundred Years of American History," "Political Parties in the United States," etc. Revised with Additions. 8vo. Cloth, gilt top, $3.00.

"The intention of this volume is to give the American people a concise narrative of the natural resources of their own country, in all their numerous forms. . . . Attention is occasionally directed to the immense value of the natural resources of the United States when compared with those of other countries. Truth is not a braggart, and it is proper that the fact in this relation should be known, that the American people, especially the younger portion, may appreciate more fully the natural advantages of their own country."—*From the Preface.*

The Greater Glory.

A Story of High Life. By MAARTEN MAARTENS, author of "God's Fool," "Joost Avelingh," etc. 12mo. Cloth, $1.50.

"A remarkably fine novel, vividly realistic in the best sense of that qualification, and wonderfully strong in its character drawing. The author may unquestionably be ranked among the most brilliant of living writers of fiction. He is a thorough literary artist, and in all that he does his profound study and knowledge of human nature are made manifest. The dramatic interest of the story is vigorous, and its pathos and its humor are alike admirable. Those who have read his earlier books will need no inducement to make themselves acquainted with this, the most recent of his masterly contributions to the literature of fiction."—*Boston Saturday Evening Gazette.*

History of the Indian Walk

Performed for the Proprietaries of Pennsylvania in 1737, to which is appended a Life of Edward Marshall, one of the walkers, by William J. Buck, Member of the Historical Society of Pennsylvania. 1 vol., 12mo, cloth, 269 pages. The book was printed from type and limited to 210 copies. We bought the remainder of the edition, consisting of 35 copies, and can sell them for $2.00; Postage 9c. Sooner or later it will be one of the "*Scarce* Americana."

In its beginning the Indian Walk appeared but a small affair that lay chiefly between the Proprietaries of Pennsylvania and the native Indians. With time the results of its injustice became more and more apparent, and on the part of the Indians culminated in war and the most determined efforts for the recovery of their favorite hunting grounds, of which they were defrauded by the extraordinary head-line drawn from the end of the Walk, costing the lives of hundreds of the unfortunate settlers. The Assembly of Pennsylvania, through their agent, Dr. Franklin, had the affair laid before the King and Government of Great Britain for investigation, thus claiming attention on both sides of the Atlantic, and resulting in considerable feeling. However, the excitement attending it in Pennsylvania was prepar ng the people more and more for independence. The Indian Walk had a more important bearing on the history of Pennsylvania than has generally been supposed

The Principles of Philosophy:

Or, Logic, Psychics, and Physics

Considered as a Unity, in the light of the Nineteenth Century. A Series of Works in Twelve Volumes. By C. S. PEIRCE.

The whole forms an exposition and vindication of that method of thinking, called Synechism, which depends upon an incessant application of the conception of continuity.

The first volume, entitled "A Review of the Leading Ideas of the Nineteenth Century," will go to press shortly.

Each volume, being a distinct work, may be subscribed for separately. Prospectus and syllabus on application Address

MR. C. S. PEIRCE,

"Arisbe," Milford, Pa.

The following are a few among the many valuable expressions of eminent students of mind, students of nature, and teachers of religion (the names in each class alphabetically arranged) which have reached the author:

From Students of Mind.

DR. FRANCIS ELLINGWOOD ABBOT writes: "I want you to put me down at once as a subscriber. It is not a question of 'agreement' as to results, or even as to methods. I must have your volumes because I know you to be one of the very few Americans who have manifested a genius for speculation, and because I want all the light I can get from those few. We have had parrotry in philosophy *ad nauseam*, and I want your books because I am certain to find in them the working of a deep, acute, and powerful mind, instead of contortional attitudinizing and cheap philosophical gossip."

PROF. ELLERY W. DAVIS writes: "Your ideas have been among the most valuable I have received. There are others of your pupils at the Johns Hopkins who have a like feeling. The interest has been recently revived."

MR. JOHN FISKE writes: "The sight of the prospectus of your Principles of Philosophy filled me with delightful anticipations, such as I had not known for some years. The glimpses which I have got from time to time during the past twenty-five years in talking with you, and in hearing or reading an occasional paper of yours, have made me very eager to see a comprehensive exposition of your whole scheme of thought. It is certain to be of immense value to me, and all the more so because you approach such problems in a way different from that to which I am most accustomed."

PRESIDENT G. STANLEY HALL writes: "I have read your prospectus with very great interest, as I have done everything you ever wrote. If you are able to carry out such a scheme as this, it will be of great importance for both the philosophical work and representation in this country."

PROF. WILLIAM JAMES writes: "I am heartily glad to learn that you are preparing to publish the results of your philosophizing in a complete and connected form. Pray consider me a subscriber to the whole series. There is no more original thinker than yourself in our generation. You have personally suggested more important things to me than, perhaps, any one whom I have known."

PROF. JOSIAH ROYCE writes: "I have long wished to see the task of whose first results you have already given some very important, though still, as I know, but fragmentary indications, put into adequate and permanent form. What has so far appeared has been so novel, so stimulating, so profound in many of its general conceptions, so ingenious in its combinations, that I only express my natural appreciation of your genius when I say that I deeply desire to see the finished product; and I am sure the enterprise deserves the support of every lover of philosophic progress in this country. In saying this I do not, as you know, mean to express, either in advance, or as to what has already appeared, any unqualified agreement."

From Students of Nature.

Prof. S. P. LANGLEY writes: "I have read with interest the announcement of your proposed work. . . . The manner in which you have assimilated what is most material to your purpose in the past, has in no way encumbered the activity of your own mind. . . . I shall expect a valuable addition to the thought of the past and to that of the present."

Prof. O. C. MARSH, President of the National Academy of Sciences, writes: "I am very glad to know that this great work on which you have spent so much time and thought is so far advanced towards publication."

PROF. SIMON NEWCOMB writes: "I am persuaded that whatever you might write on the subject of scientific philosophy would be provocative of thought and discussion, and therefore interesting, whether one accepted your conclusions or not. You may, therefore, put me down as a subscriber to your proposed volumes."

From Teachers of Religion.

DR. PAUL CARUS writes in the *Monist:* "Mr. Peirce is inclined to look at the world through the spectacles of that new and extremely specialized branch of logic which he is at present about to invent. . . . I do not take any stock in it. . . . He has a special talent of rendering issues involved."

RT. REV. FREDERICK D. HUNTINGTON, D.D., Bishop of Central New York writes: "With such judgment as I am able to form of the past and present work of Mr. Peirce, . . . I commend his proposed publication to thinking and studying men."

Ships that Pass in the Night.

A Novel. By BEATRICE HARRADEN. 16mo, $1.00. Paper, 50 cents.

"Ships that pass in the night, and speak each other in passing,
Only a signal shewn, and a distant voice in the darkness;
So, on the ocean of life we pass and speak one another,
Only a look and a voice, then darkness again and silence."

"'Ships that Pass in the Night' has made its success by purely legitimate methods. . . . The author has a story to to tell, a theory to work out, a belief to impart, and that is all—except the important item that she is a good writer, keen and wise in observation and style, liberal and sympathetic in temperament. . . . I sat up half the night to finish the book."—*Jeannette L. Gilder, in the World.*

7th 1,000.

The Religion of a Literary Man.

By RICHARD LE GALLIENNE. 12mo, $1.00.

"Mr. Le Gallienne has produced a book well worth reading, particularly (so at least we should say) by those who are most disposed to differ with him, . . . The author treats of the hereafter with great courage, and says a good many things well worthy of the utmost attention. . . . The book is certainly a remarkable one, and we urge our readers not to trust to any second-hand account, but to make themselves acquainted with its contents by the ancient method of perusal."—*London Speaker.*

"Probably the sunniest book on religion ever published."—*London Star.*

6th 1,000.

A Literary Courtship.

Under the Auspices of Pike's Peak. By ANNA FULLER, author of "Pratt Portraits." Fourth Edition. 12mo, illustrated, $1.00.

"An altogether charming little story."—*Cleveland Plain Dealer.*

"The brightest, breeziest, most satisfactory bit of fun and romance which has come to our notice in many a day."—*Chicago Interior.*

"It is a book to read and enjoy, either alone or with pleasant companions, and to make the reader glad that the author has given us such a charming combination of humor, naturalness, and originality."—*Public Opinion, Washington, D. C.*

5th 1,000.

Pratt Portraits:

Sketched in a New England Suburb. By ANNA FULLER. Third Edition. 16mo, paper, 50 cents; cloth, $1.00.

"One of the richest and most worthy contributions to American literature of the past decade. With a pen positively photographic, this skilful writer has limned the portraits of this New England family. Pratt by name and so thoroughly New England by nature."—*Rochester Herald.*

3d 1,000.

Harvard Stories.

Sketches of the Undergraduate. By W. K. POST. Second Edition. 12mo, $1.25.

"Mr. Post's manner of telling these tales is in its way inimitable The atmosphere of the book in its relation to the localities where the scenes are laid is well nigh perfect. The different types of undergraduates are clearly drawn, and there is a dramatic element in most of the stories that is very welcome. It goes without saying that Harvard men will find keen pleasure in this volume, while for those who desire a faithful picture of certain phases of American student life it offers a noteworthy fund of instruction and entertainment."—*Literary News.*

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

"He is WELL PAID that is well SATISFIED."

A NEW AND IMPORTANT WORK BY JUDGE DILLON.

JUST PUBLISHED.

The Laws and Jurisprudence OF England and America.

Being a series of Lectures delivered before Yale University.

BY JOHN F. DILLON, LL.D.,

Storrs Professor, Yale University, 1891–1892.

One volume, 8vo, Cloth, $4.00 *net.*

This book consists of a series of twelve lectures given by Judge Dillon at Yale University, in 1892, upon Our Law in its Old Home, England, and in its New Home, the United States. They have been carefully annotated by the author, for purposes of further illustration and development. The book deals with nearly all of the great living questions connected with our laws and jurisprudence, such as **legal education, trial by jury, judicial tenure, the origin, development, and characteristics of the common law, written constitutions, legislation, case law, the law reports, judicial precedents, codification, and legal reform.**

Although these subjects are presented in a popular way, and with an endeavor to surround them with their appropriate historical and literary accompaniments, the real purpose is always a serious purpose, having in view practical ends and results. The discussions are not intended alone for students of the law, but for the practising lawyer as well; and they contain throughout a free expression of the author's views. In fact, the book was designed as a vehicle in which to give the author's matured opinions, formed as the result of his studies and reflections, and of his experience of forty years at the bar and upon the bench. The work is unique in our legal literature, both in design and mode of execution.

HAVE NOW READY:

Secularism:

Its Progress and Its Morals. By JOHN M. BONHAM, author of "Industrial Liberty," etc. 12mo, $1.75.

The Evolution of Woman.

An inquiry into the dogma of her inferiority to man. By ELIZA BURT GAMBLE. 12mo, $1.75.

Art in Theory.

An Introduction to the Study of Comparative Æsthetics. By GEO. L. RAYMOND, Professor of Æsthetics at Princeton, author of "The Genesis of Art Forms," etc., etc. 12mo, cloth, $1.75.

The Venetian Painters of the Renaissance.

With an essay on their genius, and a full list of their works in British and Continental Galleries. By BERNHARD BERENSON. 12mo, with frontispiece, $1.25.

A History of Social Life in England.

A record of the progress of the people in religion, laws, learning, arts, science, literature, industry, commerce, and manners, from the earliest times to the present date. Edited by H. D. TRAILL, D.C.L. The work is to be completed in about six volumes. Volume I. (from the Earliest Times to the accession of Edward I.) now ready. $3.50.

"It has been primarily designed," says the editor, "to supply a clear and consecutive account of the progress of the people of England in the several departments and activities of human life. The subjects considered have been so framed and the material so arranged that the work can be read with pleasure and instruction by the general reader, while it has been planned expressly with reference to the requirements of students engaged in the investigation of the history of English letters and learning, English art and science, English industry and commerce."

Ships that Pass in the Night.

A Novel. By BEATRICE HARRADEN. 30th thousand. 16mo, $1.00. Popular edition, paper, 50 cents.

"'Ships that Pass in the Night' has made its success by purely legitimate methods. . . . The author has a story to tell, a theory to work out, a belief to impart, and that is all—except the important item that she is a good writer, keen and wise in observation and style, liberal and sympathetic in temperament. . . . I sat up half the night to finish the book."—*Jeannette L. Gilder, in the World.*

"There is a wealth of philosophy, humor, and pathos in this little tale, and it is told so simply that one feels as if he were a part of it, somehow. So truly are the human heartstrings struck that he must be beyond redemption whose inner self does not vibrate in sympathy many times, as the pages are turned. There is an abundance of sound sense, and innumerable quotable passages, and not a dull page. Many a more pretentious volume seeks in vain for such an encomium. New thoughts are suggested because old thoughts are so truly phrased, and new motives and higher aims are inspired by this little book because it gets right down to the human entities and reveals the chords of life as they are, some time or other, in every life. 'Ships that Pass in the Night' is one book in ten thousand; you should read it."—*Boston Times.*

Descriptive prospectuses of the "Story of the Nations" and the "Heroes of the Nations," and quarterly "Notes," giving full descriptions of the season's publications, sent on application.

Pamphlets, rates, and values for any age sent on application to the Company's office, or to
KENNY & RATCLIFFE, General Agents,
208 Broadway, New York, N. Y,

BENJ. F. STEVENS, President.
ALFRED D. FOSTER, Vice President.
S. F. TRULL, Secretary.
WM. B. TURNER, Asst. Secretary.

Office of the H-O (Hornby's Oatmeal) Company,

71 Park Place, New York City.

The following are the By-Laws of the above-named Company regulating the election of Directors and Officers:

ARTICLE I.—DIRECTORS.

Section 1. The number of Directors of this Company shall be five, all of whom shall be elected, by ballot, by the stockholders who shall attend in person or by proxy at the annual meeting of the Company, and each Director shall be elected to serve for the term of one year.

Section 2. Vacancies in the Board of Directors occurring during the year shall be filled by a majority vote of the remaining members of the Board at any regular meeting of the Board or at any special meeting called for the purpose of filling such vacancy.

ARTICLE II.—OFFICERS.

Section 1. The Board of Directors, immediately after each annual meeting, shall elect, by ballot, the officers of the Company for the ensuing year, and a majority vote of the whole number of directors shall be necessary for the election of each of said officers.

Section 4. In the absence or incapacity of the President and Vice-President, the Board of Directors may elect one of their number to act as President *pro tempore*, who, during such absence or incapacity to act, shall have the powers of the President.

Section 7. Vacancies among the officers of the Company during the year may be filled by a majority vote of the directors at any regular meeting of the board, or at any special meeting called for the purpose of filling such vacancy, of which at least five days notice by mail shall be given.

ARTICLE III.—MEETINGS.

Section 1. The annual meeting of the Company for the election of directors shall be held at the office of the company on the first Monday in April of each year, at twelve o'clock, noon, and the Secretary shall send through the post-office, at least ten days before such meeting, a notice thereof, addressed to each stockholder at his last known post-office address. Should said first Monday be a legal holiday, then such meeting shall be held on the next business day at the same hour.

ARTICLE IV.—INSPECTORS OF ELECTION.

Section 1.—Two Inspectors of election shall be chosen at each annual meeting of the Company to serve for one year, and if any inspector shall refuse to serve or shall not be present at the time of election, the meeting may appoint an inspector in his place. For the first year of the Company's business, such inspectors shall be appointed by the Board of Directors.

Dated NEW YORK, February 17th, 1894.

ALFRED E. ROSE, President.
GEORGE C. WITTPEN, Secretary.

History of Dartmouth College

AND THE TOWN OF HANOVER, N. H., by FREDERICK CHASE. Vol. I. to the outbreak of the college controversy. Large 8vo, cloth, $3.50 net; postage 24 cents. Sent on receipt of price by
JOHN K. LORD, Hanover, N. H.

Charles Scribner's Sons' New Books

LIFE AND CORRESPONDENCE OF DEAN STANLEY.

By R. E. PROTHERO. With the coöperation of Dean BRADLEY. With Portraits. 2 vols., 8vo, $8.00.

"The book in every way fulfils the anticipations that were aroused by the announcement of it."—*Chicago Tribune*

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many wellnigh indispensable."—*Boston Journal.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

The Barbary Coast.

By HENRY M. FIELD. Illustrated. 8vo, $2.00.

"Alert and interesting travel observations. It abounds in picturesqueness of description and illustration of nearly all portions of the once great empire of the Moors."—*Brooklyn Eagle.*

Men, Women, and Books.

By AUGUSTINE BIRRELL. 16mo, $1.00.

"Augustine Birrell has won for himself an enviable reputation as an essayist, and his new volume will add to it His pen sketches are wonderfully graphic."—*Boston Advertiser.*

REMBRANDT.

His Life, His Work, and His Time. By ÉMILE MICHEL. Edited and Prefaced by FREDERICK WEDMORE. Richly illustrated with reproductions from Rembrandt's Works. 2 vols., Royal 8vo, $15.00.

"Let us say at once that the book is admirable, and, considering what it contains, astonishingly cheap. M. Michel is one of the leading authorities on Rembrandt and his works, and has written a monumental, and, we should think, nearly definitive life. Hardly too much can be said in praise of the illustrations."—*The Nation.*

The Pasquier Memoirs.

Edited by DUC D'AUDIFFRET-PASQUIER. With Portraits. 3 vols., 8vo. Vol. I. now ready. $2.50.

"Since the record of Madame de Rémusat's observations was given to the world, no light so copious and searching has been thrown upon the Napoleonic era as is cast by this volume."—M. W. HAZLETINE in *N. Y. Sun.*

Civilization During the Middle Ages.

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

PHILOSOPHY OF HISTORY—FRANCE.

By ROBERT FLINT, D.D., LL.D., Professor in the University of Edinburgh, author of "Theism," "Anti-Theistic Theories," etc. 8vo, $4.00.

"The volume makes up a large octavo of 705 pages, and is replete in interest to the philosophical student of history. It is both historical and critical, and it aims to show the rise and progress of reflection and speculation in human developments. It is a valuable and entertaining book. The thoughtful scholar will find the volume a rich mine of thought."—*Chicago Inter Ocean.*

The Jacobean Poets.

By EDMUND GOSSE. University Series. 12mo, $1.00, *net.*

Mr Gosse's little book directs critical attention to all that was notable in English poetry from 1603 to 1625, bringing fresh light to bear upon this great period of English poetry.

In the Footprints of Charles Lamb.

By B. E. MARTIN. With bibliography by E. D. NORTH. Cheaper edition, revised. Illustrated. 12mo, $1.50.

"Such a book as Dr. Martin's will come like a personal favor to each of Lamb's lovers."—MR. HOWELLS, in *Harper's Magazine.*

NEW IMPORTATIONS.

THE PRIVATE LIFE OF NAPOLEON.

From the French of ARTHUR LÉVY, by STEPHEN LOUIS SIMEON, translator of "The Youth of Frederick the Great," etc. In 2 vols. Demy 8vo, $10.00.

"Among the many important books which have recently appeared in France relating to the first Napoleon, a high place must be given to the work of M. Lévy on his private life. . . . He has produced a book of fascinating interest."—W. E. H. LECKY.

Pastorals of France—Renunciations

By BENJAMIN KIDD. 8vo. *Just Ready.*

Sources of the Constitution of the United States.
By the Rev. Dr. C. ELLIS STEVENS. 12mo. *In the Press.*

JUST PUBLISHED.

THE KING OF SCHNORRERS.

GROTESQUES AND FANTASIES. By I. ZANGWILL, author of "Children of the Ghetto," "The Old Maids' Club," "Merely Mary Ann," etc. With numerous Illustrations. 12mo, $1.50.

*** In *The King of Schnorrers* Mr Zangwill attempts a delineation of the Jewish 'Schnorrer' of tradition—a personage "as unique among beggars as Israel among nations." The author conducts his hero through a number of amusing adventures, recounting these in that vivid style familiar to his readers Some of the shorter stories in the volume are tragic and some comic, Mr. Zangwill playfully delegating to the critic the task of "determining which is which."

The Lovers' Lexicon.
A Handbook for Novelists, Playwrights, Philosophers, and Minor Poets; but especially for the enamoured. By FREDERICK GREENWOOD. Crown 8vo. $1 50.

Second Edition Now Ready.

PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY:

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. $5.00.

"This work of the great English astronomer is of most fascinating interest, and it is profusely and appropriately illustrated. The field which is covered is a new one, but it is one which should be fully investigated. The style is clear and graphic, and the publishers have given this great work a fitting setting."—*Boston Daily Advertiser.*

Dictionary of Political Economy:
Containing Articles on the Main Subjects usually dealt with by Economic Writers, Short Notices of Deceased English, American, and Foreign Economists, and their chief Contributions to Economic Literature, etc.
Edited by R. H. INGLIS PALGRAVE, F.R.S. Volume I. Medium 8vo. $6.50.
*** *May also be had in six parts. Price, $1.00 each.*

The Distribution of Wealth.
By Professor JOHN R. COMMONS of the University of Indiana. 12mo, $1.75.
"Clear and vigorous in style. . . . It is a valuable addition to the economic literature of the day."—*Boston Daily Advertiser.*

A History of Mathematics.
By FLORIAN CAJORI, formerly Professor of Applied Mathematics in the Tulane University of Louisiana, now Professor of Physics in Colorado College. 8vo cloth, $3.50.

COMPLETION OF "SYLVIE AND BRUNO."
By the Author of "Alice's Adventures in Wonderland."

WATSON'S ANNALS.

Annals of Philadelphia and Pennsylvania in the Olden Time;

Being a collection of Memoirs, Anecdotes, and Incidents of the city and its inhabitants, and of the earliest settlements of the inland part of Pennsylvania, intended to preserve the recollections of olden time, and to exhibit society in its changes of manner and customs, and the city and country in their local changes and improvements. By JOHN F. WATSON, Member of the Historical Societies of Pennsylvania, New York, and Massachusetts. Enlarged, with many revisions and additions, by Willis P. Hazard. Profusely illustrated. Three octavo volumes, handsomely bound in cloth. Our price for the three volumes, $5.00.

Every person who is interested in the history of Philadelphia should have a copy of Watson's Annals. It is the only book that is an authority on the early history of this great city. We have purchased the stereotype plates and copyright of this well-known book, made a new edition, three volumes, octavo, containing over 1,700 pages and upwards of 70 illustrations of old Philadelphia Landmarks, which we sell at Five Dollars for the entire set of three volumes. It would be a desirable gift to any resident or former resident of Philadelphia.

LANGUAGES SPOKEN AT HOME IN TEN WEEKS

German, French, or Spanish actually spoken in 10 weeks without leaving your home, by "ROSENTHAL'S PRACTICAL LINGUISTRY," latest and best work of Dr. R. S. Rosenthal, author of the Meisterschaft System. Pupils taught as if actually in presence of a teacher. All questions answered and exercises corrected free of charge. Part I, 50c.; books and membership in correspondence school, $5.00 each language.

MEISTERSCHAFT. SUPERSEDED

The "Meisterschaft System," so extensively advertised by a Boston Company, was written by Dr. Rosenthal twenty years ago. His latest work, just published, "The Rosenthal Method of Practical Linguistry," supersedes it entirely.

Letter from George W. Childs.

PHILA., May 12, 1893.

My Dear Mr. Gutekunst:
I have this day received from you one of the most valued presents of my life, the Pastel Life-size Portrait of myself. My friends all say it is the best portrait of me that they have ever seen. It is to be hung in my new office, to go down to posterity with my choicest treasures.
Sincerely your friend, GEO. W. CHILDS.

THE F. GUTEKUNST CO., 712 Arch St., Philada.

AMERICAN HISTORY.

Important Works of Reference.

The Writings of George Washington

Including his Diaries and Correspondence. Edited by Worthington C. Ford. Complete in fourteen royal octavo volumes, handsomely printed from type, uniform with Bigelow's edition of Franklin's Works and Lodge's edition of Hamilton's Works. Limited to 750 sets. 8vo, half leather, gilt tops. The set, 14 vols., to subscribers, $70.

"Under Mr. Ford's able editorship we have at last an edition of the Writings of Washington worthy of the man, his cause, and his country."—*Phila. Times.*

The Writings and Correspondence of Thomas Jefferson.

Edited by Paul Leicester Ford. Uniform with the sets of the "Writings" of "Hamilton," "Franklin," "Washington," and "Jay." To be complete in 10 vols., 8vo, half leather, gilt tops. The set, $50.00.
Volume III. now ready.

Limited edition, 750 copies, printed from type.

"The importance of the edition does not lie wholly in the form in which it is published or in the care with which the contents have been brought together and annotated. Mr. Ford has included in it a large mass of matter either new to print or new to an edition of Jefferson's writings."—*New York Times.*

The Writings and Correspondence of John Jay,

First Chief-Justice of the United States. Edited by Edward P. Johnston, Professor of American History in the College of the City of New York. Complete in four volumes, octavo, uniform in size and style with the editions already issued of the writings of "Hamilton," "Franklin," and "Washington." The edition is, like these, printed from type, and limited to 750 copies. 8vo, half leather, gilt tops. The set, 4 vols., $20.

"The extraordinary value of a correspondence of this nature need not be urged. It is of an importance not second to the writings of George Washington."—*Cleveland Leader.*

Of the limited editions of the above three works, a few copies still remain to be subscribed for. The companion editions of the Writings of Hamilton and Franklin are out of print and have very materially appreciated in value.

The Life and Correspondence of George Mason of Virginia.

Edited by Kate Mason Rowland. With an Introduction by General Fitzhugh Lee. With portrait of Mason and facsimile of the Bill of Rights. 2 vols., 8vo, $8.00.

In Course of Publication.

The Writings of Thomas Paine.

Political, Sociological, Religious, and Literary. Edited by Moncure Daniel Conway. With Introduction and Notes. To be complete in four volumes, uniform with Mr. Conway's "Life of Paine." Price per volume, $2.50.
Volume I. now ready.

Mr. Conway is fitted for the task of editing Paine, as is perhaps no other man in this country, both on account of his intimate knowledge of the details of Paine's life and times, as well as by his varied opportunities both here and abroad of searching among the libraries and archives for anything which could be justly considered as the work of Paine's pen.

The Life and Correspondence of Rufus King.

His Private and Official Papers, for the first time made public. Edited and annotated by his grandson, Dr. Charles R. King. Complete in five octavo volumes. Limited edition, printed from type. The set, half leather, uniform with the Writings of Jefferson and Washington, to subscribers, $25.00.

The task of collecting and editing these very important historical papers was early attempted by his son, Charles King, then President of Columbia College, but little more was accomplished than collecting the scattered material, and it remained for his grandson to edit them and make them public.

Send for Descriptive Prospectuses of any of the above works.

G. P. PUTNAM'S SONS,
27 and 29 West 23d St., New York.

GINN & COMPANY PUBLISH:

THE PSYCHIC FACTORS OF CIVILIZATION. By LESTER F. WARD, author of Dynamic Sociology. 8vo. Cloth. xxi+369 pages. Price, $2.00.

This book is a new presentation of the whole subject of social progress, past, present, and future, written from a scientific standpoint, but in a popular style, and carrying the reader from the most fundamental principles up to their application to the living issues of the times. It seeks to base our civilization on MIND instead of brute force. It breathes a thoroughly liberal, progressive, and American spirit, and cannot fail to be of great interest to all who wish to be acquainted with the advanced thought of the age.

Public Opinion: "It bears a fundamental relation to the great social problems that are now forcing themselves on public attention, and no one who would properly prepare himself adequately to grapple with these problems can afford to neglect Professor Ward's latest contribution to the elucidation of their underlying principles.

MECHANISM AND PERSONALITY. By FRANCIS A. SHOUP, D.D., Professor of Analytical Physics, University of the South. 12mo. Cloth. xvi+341 pages. Price, $1.30.

This book is an outline of Philosophy in the light of the latest scientific research. It deals candidly and simply with the "burning questions" of the day, the object being to help the general reader and students of Philosophy find their way to something like definite standing-ground among the uncertainties of science and metaphysics.

GEO TRUMBULL LADD, *Professor of Philosophy, Yale University:* "I find it an interesting and stimulating little book. Written, as it is, by one whose points of view are somewhat outside of those taken by professional students of philosophy, it is the fresher and more suggestive on that account."

ETHICS OF HEGEL. (Ethical Series.) Edited, with an Introduction, by Professor J. Macbride Sterrett, Columbian University. 12mo. Cloth. xii+216 pages. Price, $1.10.

This volume contains selections from the *Philosophie des Rechts* and other works of Hegel. The introduction gives the relation of Hegel's theory with the ethical thought of his immediate predecessors, and a popular exposition of his own theory.

W. T. HARRIS, *United States Commissioner of Education:* "It is one of the most important additions to the literature of ethics accessible to English readers that has been made in many years."

HUME'S TREATISE OF MORALS: AND SELECTIONS FROM THE TREATISE OF THE PASSIONS. (Ethical Series.) With an Introduction by James H. Hyslop, Ph.D., of Columbia College, New York. 12mo. Cloth. vii+275 pages. Price, $1.10.

THE PHILOSOPHICAL REVIEW.

Edited by J. G. SCHURMAN, Dean of the Sage School of Philosophy in Cornell University, and Prof. J. E. CREIGHTON of Cornell University. Crown 8vo. About 128 pages in each number. Annual subscription (six numbers), $3.00; single number, 75 cents.

The domain of this journal is the field of General Philosophy: that whole which includes along with the older subjects of Logic, Metaphysics, and Ethics, the newer subjects of Psychology, Æsthetics, Pedagogy, and Epistemology, both in their systematic form and in their historical development.

Any of the above books sent, postpaid, on receipt of price. Special terms for class use.

We have an announcement in the *Nation* every week, here or just after Schools.

Ginn & Co., Publishers, Boston, New York, Chicago, London

LONGMANS, GREEN, & CO.'S NEW BOOKS.

BY CANON NEWBOLT.

Passion-tide Sermons

Crown 8vo. $2.00.

Easter in St. Paul's

Sermons bearing chiefly on the Resurrection of our Lord. New and Cheaper Edition in one volume. Crown 8vo. $2.00.

BY WYLLYS REDE, M.A.

The Communion of Saints

By the Rev. WYLLYS REDE, M.A. With a Preface by Lord Halifax. Crown 8vo. $1.25.

"Mr. Rede, as whoever reads the dedication and author's preface of this volume will discover, writes from the promptings of natura affections and deep personal experience. The theological ground covered by these lectures is as old as the Christian Church; but this persuasive, popular presentation of the subject, utterly free from technicalities, gives an irresistible and peculiarly human charm to the familiar truth. . . . We have no doubt that there are still many thousands among our own communicants who will be edified and comforted by the message conveyed in this attractive little book."—*The Churchman.*

BY R. M. BENSON, M.A.

The Final Passover:

A Series of Meditations upon the Passion of Our Lord Jesus Christ.

By the Rev. R. M. BENSON, M.A., Student of Christ Church.

Vol. III. The Divine Exodus. Part I. and II. Crown 8vo. Each, $1.75.

"It is a book which may be used with the greatest advantage by Christians of every school and creed without any fear of being jarred by the conflict of views at variance with their own. For it is not a book of views or opinions, but of deep and profound spiritual devotion."—*Pacific Churchman*, San Francisco.

BY CANON BODY.

The Life of Love

A Course of Lenten Lectures

By the Rev. GEORGE BODY, M.A., D.D., Canon Missioner of the Diocese of Durham. 12mo. $1.00.

Office of the H-O (Hornby's Oatmeal) Company,

71 Park Place, New York City.

The following are the By-Laws of the above-named Company regulating the election of Directors and Officers:

ARTICLE I.—DIRECTORS.

Section 1. The number of Directors of this Company shall be five, all of whom shall be elected, by ballot, by the stockholders who shall attend in person or by proxy at the annual meeting of the Company, and each Director shall be elected to serve for the term of one year.

Section 2. Vacancies in the Board of Directors occurring during the year shall be filled by a majority vote of the remaining members of the Board at any regular meeting of the Board or at any special meeting called for the purpose of filling such vacancy.

ARTICLE II.—OFFICERS.

Section 1. The Board of Directors, immediately after each annual meeting, shall elect, by ballot, the officers of the Company for the ensuing year, and a majority vote of the whole number of directors shall be necessary for the election of each of said officers.

Section 4. In the absence or incapacity of the President and Vice-President, the Board of Directors may elect one of their number to act as President *pro tempore*, who, during such absence or incapacity to act, shall have the powers of the President.

Section 7. Vacancies among the officers of the Company during the year may be filled by a majority vote of the directors at any regular meeting of the board, or at any special meeting called for the purpose of filling such vacancy, of which at least five days notice by mail shall be given.

ARTICLE III.—MEETINGS.

Section 1. The annual meeting of the Company for the election of directors shall be held at the office of the company on the first Monday in April of each year, at twelve o'clock, noon, and the Secretary shall send through the post-office, at least ten days before such meeting, a notice thereof, addressed to each stockholder at his last known post-office address. Should said first Monday be a legal holiday, then such meeting shall be held on the next business day at the same hour.

ARTICLE IV.—INSPECTORS OF ELECTION.

Section 1.—Two Inspectors of election shall be chosen at each annual meeting of the Company to serve for one year, and if any inspector shall refuse to serve or shall not be present at the time of election, the meeting may appoint an inspector in his place. For the first year of the Company's business, such inspectors shall be appointed by the Board of Directors.

The Columbia Bicycle Catalogue

For 1894

Describes fully the new line of Columbia Wheels, and is by far the handsomest and most comprehensive ever issued by a bicycle establishment. It is artistic in design, and beautifully printed and illustrated. Its pages are alive with interesting matter pertaining to cycling, and should be read by every intending purchaser of a bicycle.

We mail it on receipt of two 2-cent stamps, or it may be obtained free at Columbia Agencies.

History of Dartmouth College

AND THE TOWN OF HANOVER, N. H., by Frederick Chase. Vol. I. to the outbreak of the college controversy. Large 8vo, cloth, $3.50 net; postage 24 cents. Sent on receipt of price by
JOHN K. LORD, Hanover, N. H.

"If it were DONE when 'tis DONE, then 'twere well it were DONE QUICKLY."
—Macbeth.

and if it is a **Croquette,** or an **Oyster,** or a **Pie,** or a **Doughnut,** or a **Biscuit,** or any other article that needs

SHORTENING

when 'tis *done*, 'twill be *better done* as well as *more quickly done* if you use

Cottolene

The Vegetable Shortening.

It is purer than lard; it is without the objectionable flavor of lard; it heats quicker than lard; it browns better than lard, and does not make food greasy and indigestible as lard does.

Ask your grocer for Cottolene, and accept no imitations. Sold everywhere in three and five pound pails.

Made only by
The N. K. Fairbank Company,
CHICAGO,
New York, Boston, Philadelphia, San Francisco, St. Louis, Montreal.

"WE WANT YOU TO TRY
GOLDEN SCEPTRE
SMOKING TOBACCO.

Charles Scribner's Sons' Important New Books

SECOND VOLUME NOW READY.

THE PASQUIER MEMOIRS.

Edited by DUC D'AUDIFFRET-PASQUIER.

With Portraits. In 3 vols., 8vo.

Volume II., 1812–1814, now ready, $2.50.

Volume I., 1789–1812, $2.50.

"Its value is great. The author brings before us and illustrates with peculiar clearness the characteristics of an extraordinary time. He gives us vivid and thoughtful sketches of the First Empire."—*From leading article of Edinburgh Review.*

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period."—*Atlantic Monthly.*

LIFE AND LETTERS OF DEAN STANLEY.

By R. E. PROTHERO. With the coöperation of Dean BRADLEY. *Second Edition.* With Portraits and Illustrations. 2 vols., 8vo, $8.00.

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well nigh indispensable."—*Boston Journal.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

CIVILIZATION DURING THE MIDDLE AGES.

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

THE BARBARY COAST.

By Dr. H. M. FIELD. Illustrated. Crown 8vo, $2.00.

"A free and delightful series of chapters concerning Northern Africa. They are fresh and bright portraitures of a life entirely foreign to our own. The natives are pictured in all the lights and shadows of the African climate, and the scenery is described with power and enthusiasm."—*Boston Herald.*

IN THE FOOTPRINTS OF CHARLES LAMB.

By B. E. MARTIN. With bibliography by E. D. NORTH. Cheaper edition, revised. Illustrated. 12mo, $1.50.

"Such a book as Dr. Martin's will come like a personal favor to each of Lamb's lovers."—MR. HOWELLS, in *Harper's Magazine.*

The FLETCHER PRIZE of $500

The Trustees of Dartmouth College offer the above prize, according to the will of the Hon. Richard Fletcher, for the best Essay calculated to counteract the present tendency to a "Fatal Conformity to the World." The following subjects are assigned, with the date at which each essay is to be forwarded:

1. In what ways ought the conception of personal life and duty to be modified? Dec. 31, 1894.
2. Should any restrictions, legal or moral, be placed upon the accumulation of wealth? Dec. 31, 1896.
3. How can education be made a greater safeguard against materialism? Dec 31, 1898.

These subjects may be treated singly or in course. No essay to exceed 250 pages of 270 words each. Circular containing further particulars forwarded if desired.

WILLIAM JEWETT TUCKER,
President of Dartmouth College.
HANOVER, N. H., Feb. 15, 1894.

JUST PUBLISHED.

SOCIAL EVOLUTION.

By BENJAMIN KIDD. 8vo, $2.50.

"The name of Mr. Benjamin Kidd, author of a very striking work on Social Evolution, is, so far as we know, new to the literary world; but it is not often that a new and unknown writer makes his first appearance with a work so novel in conception, so fertile in suggestion, and on the whole so powerful in exposition as 'Social Evolution' appears to us to be . . . 'Social Evolution' is a book which no serious thinker should neglect, and no reader can study without recognizing it as the work of a singularly penetrating and original mind."—*The Times* (*London*).

Pain, Pleasure, and Æsthetics.

An Essay concerning the Psychology of Pain and Pleasure, with special reference to Æsthetics. By HENRY RUTGERS MARSHALL, M.A. 8vo, $3.00.

The Poems of A. H. Hallam.

Edited, wich an Introduction, by Richard Le Gallienne. 12mo, cloth, $1.50.

PROFESSOR GOLDWIN SMITH'S TRANSLATIONS FROM GREEK AND LATIN POETS.

SPECIMENS OF GREEK TRAGEDY.

IN TWO VOLUMES.

VOLUME I., ÆSCHYLUS AND SOPHOCLES. VOLUME II., EURIPIDES. 16mo, buckram, gilt top, $1.25 each.

*** Estimating his fitness to give English renderings of the poets represented in these volumes, "No one," says the New York *Sun*, "would dispute the qualifications of Mr. Goldwin Smith on the score of thorough knowledge of Greek literature, especially of its dramatic masterpieces, and it only remained to be decided by experience whether he was likewise possessed of adequate poetical gifts. Only an affirmative answer to the question will be given by those who examine the 'Specimens of Greek Tragedy.'"

BAY LEAVES: Translations from the Latin Poets. 16mo, buckram, gilt top, $1.25.

*** SPECIMENS OF GREEK TRAGEDY, 2 volumes, BAY LEAVES, 1 volume. The 3 volumes in box, $3.75.

*** The March number contains an article on Benjamin Kidd's "Social Evolution."

MACMILLAN & CO., 66 Fifth Avenue, New York.

G. P. Putnam's Sons,

NEW YORK AND LONDON.

HAVE NOW READY:

The Story of Margredel.

By a NEW WRITER. Being the Fireside History of a Fifeshire Family. Copyrighted American Edition, uniform with "Ships that Pass in the Night." 12mo, cloth, $1.00.

The story will absorb the attention of the reader until the end, but he will desire to wander back again over its pages for the pleasure of rereading the many charming bits of philosophy and character sketches. The Baillie is excellently portrayed, and the generous nature of the times is admirably represented by the member of the Crocodile Club, who with the full authority of the club translated "*Dramatis Personæ*" as "a dram for each person."

The Writings of Thomas Paine.

Political, Sociological, Religious, and Literary. Edited by Moncure Daniel Conway. With Introduction and Notes. To be complete in four volumes, uniform with Mr. Conway's "Life of Paine." Price per volume, $2.50. Volume I. now ready.

The Evolution of Woman:

An inquiry into the dogma of her inferiority to man. By ELIZA BURT GAMBLE. 12mo, $1.75.

The Ariel Shakespeare.

The fourth group of the Ariel Shakespeare, comprising seven of the Comedies, viz.: THE TWO GENTLEMEN OF VERONA, THE MERRY WIVES OF WINDSOR, MEASURE FOR MEASURE, THE COMEDY OF ERRORS, LOVE'S LABOURS LOST, TAMING OF THE SHREW, ALL'S WELL THAT ENDS WELL. Each play in a separate volume, pocket size, large type, complete and accurate text, illustrated with the celebrated designs of Frank Howard, and bound in flexible morocco. *Sold separately*, per volume, 75 cents.

This edition will include all of the plays, 28 of which have thus far been published.

Subscriptions are invited for the entire set, to be delivered as published, and orders will be received for any volume or volumes. Descriptive prospectus sent on application.

The Venetian Painters of the Renaissance.

With an essay on their genius, and a full list of their works in British and Continental Galleries. By BERNHARD BERENSON. 12mo, with frontispiece, $1.25.

Art in Theory.

An Introduction to the Study of Comparative Æsthetics. By GEO. L. RAYMOND, Professor of Æsthetics in the College of New Jersey. 12mo, $1.25.

Primary Elections.

A study of methods for improving the basis of party organization. By DANIEL S. REMSEN. (No. 77 in the "Questions of the Day" Series.) 12mo, cloth, 75 cents.

"It is a thoroughgoing and suggestive study of methods for improving the basis of party organization, and is to be commended warmly to the consideration of all good citizens, of whatever political affiliation."—*Philadelphia Press.*

*** *Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

1894 COLUMBIAS ARE BEYOND CRITICISM

No bicycle ever made at all approaches them in beauty and style joined to excellence of construction; none so strongly appeals to the experienced rider as meeting every requirement of a perfect mount.

The need of repairs for Columbias will be infrequent under our new system of inspection, which now begins with a scientific analysis of the raw material by a metallurgist, and only ends when thorough tests have been made of the complete machine and all its parts.

1894 Standard Price, $125.00.

POPE MFG. CO.,

BOSTON, NEW YORK, CHICAGO, HARTFORD.

Seven newly-designed wheels are shown in our 1894 Catalogue, which will interest every cyclist. Our agents furnish it free, or we mail it for two 2-cent stamps.

The Englishman at Home:

His Responsibilities and Privileges.

By EDWARD PORRITT, formerly London Editor of the Manchester *Examiner.*

The author's aim has been to make the book not only of use and interest to students of civics and of English history and contemporary politics, but also of value to American visitors to England and to readers of English news in the American press. His accuracy and carefulness of statement may be subjected to the most critical test. The style is good and entertaining. The book cannot fail to be a welcome addition to every library. One volume. Cloth, 12mo, xiv + 379 pp. Appendices, Index. $1.75.

D. APPLETON & CO.,

NEW YORK.

D. Appleton & Co.'s New Books.

A History of the United States Navy.

From 1775 to 1894. By EDGAR STANTON MACLAY, A.M. With Technical Revision by Lieut. ROY C. SMITH, U.S.N. In two volumes. Vol. I. With numerous Maps, Diagrams, and Illustrations. 8vo. Cloth. Price, $3.50 per volume.

For nine years the author has devoted himself to the task of supplying the want of a complete history of our navy. His researches in France, with the assistance of Admiral Aube, Minister of the Colonies and the Marine, and in England with the aid of the late Sir Provo Wallis and others, together with the use of private papers and unpublished documents in this country, the aid of descendants of naval heroes and the suggestions of naval officers who have taken part in some of the events described, render the results of his diligent labor complete and authoritative. The appearance of a standard history of the navy is a peculiarly happy accompaniment of the development of our new navy.

(Vol. II. will be published in May next.)

Symbolic Education.

By SUSAN E. BLOW. Volume 26, International Education Series. 12mo. Cloth, $1.50.

This book discusses in a practical way the foundations of the philosophy of Froebel as found in "The Mothers' Songs and Games"—Mutter- und Koselieder—and shows in a clear manner the significance of the kindergarten and its claims for the important place of corner-stone of education. It is emphatically a book for mothers as well as for teachers, as it gives the desired aid and interpretation of the actions, feelings, and thoughts of infancy, and unfolds the true method of training as taught by Froebel.

New Edition of Professor Huxley's Essays.

Collected Essays.

By THOMAS H. HUXLEY. New complete edition, with revisions, the Essays being grouped according to general subject. In nine volumes, a new Introduction accompanying each volume. 12mo. Cloth, $1.25 per volume.

The volumes already issued are as follows:

Vol. I. **Method and Results.**
Vol. II. **Darwiniana.**
Vol III. **Science and Education.**
Vol. IV. **Science and Hebrew Tradition.**
Vol. V. **Science and Christian Tradition.**

Ready shortly:

Vol. VI. **Hume.**
Vol VII. **Ethical and Philosophical Essays.**
Vol. VIII. **Man's Place in Nature.**
Vol. IX. **Essays in Science.**

Benefits Forgot.

By WOLCOTT BALESTIER, author of "Reffey," "A Common Story," etc. 12mo. Cloth, $1.50.

"A credit to American literature and a monument to the memory of the author."—*Boston Beacon.*

"The story is of much more than average merit. There is abundance of romantic and other incident throughout the tale, which is written well, in a plain straightforward style."—*Philadelphia Press.*

A History of Germany.

From the Earliest Times to the Present Day. By BAYARD TAYLOR. With an Additional Chapter by MARIE HANSEN-TAYLOR. With Portrait and Maps. 12mo. Cloth, $1.50.

"There is, perhaps, no work of equal size in any language which gives a better view of the tortuous course of German history. Now that the story of a race is to be in good earnest the story of a nation as well, it begins, as every one, whether German or foreign, sees, to furnish unexpected and wonderful lessons. But these can only be understood in the light of the past. Taylor could end his work with the birth of the Empire, but the additional narrative merely foreshadows the events of the future. It may be that all the doings of past ages on German soil are but the introduction of what is to come. That is certainly the thought which grows upon one as he peruses this volume."—*New York Tribune.*

The Mentor:

A Little Book for the Guidance of such Men and Boys as would Appear to Advantage in the Society of Persons of the Better Sort. By ALFRED AYRES, author of "The Orthoëpist," "The Verbalist," etc. New and revised edition. 18mo. Cloth, $1.00.

Lot 13.

By DOROTHEA GERARD, author of "Lady Baby," "Orthodox," "A Queen of Curds and Cream," etc. No. 135, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"Miss Gerard is a novelist who has made a place for herself, in which she stands alone. An excellent delineator of character, she has a charmingly fresh style and a knowledge of cosmopolitan life in all its phases, which is hardly equalled by any other English writer."—*London Morning Post.*

"A new novel by this author is always something to be thankful for."—*Providence Journal.*

Our Manifold Nature.

Stories from Life. By SARAH GRAND, author of "The Heavenly Twins," "Ideala," etc. No. 136, Town and Country Library. 12mo. Paper, 50 cents; cloth, with portrait of author, $1.00.

In these stories the author of "The Heavenly Twins" shows some of her strongest and most impressive work. The great number of readers who have been charmed with her previous books will not fail to discern in this new volume the qualities which have gained for her such prompt and widespread recognition.

Appletons' Monthly Bulletin of New Publications will be sent regularly to any address free, on request.

The FLETCHER PRIZE of $500

The Trustees of Dartmouth College offer the above prize, according to the will of the Hon. Richard Fletcher, for the best Essay calculated to counteract the present tendency to a "Fatal Conformity to the World." The following subjects are assigned, with the date at which each essay is to be forwarded:

1. In what ways ought the conception of personal life and duty to be modified? Dec. 31, 1894
2. Should any restrictions, legal or moral, be placed upon the accumulation of wealth? Dec. 31, 1896
3. How can education be made a greater safeguard against materialism? Dec 31, 1898

These subjects may be treated singly or in course. No essay to exceed 250 pages of 270 words each. Circular containing further particulars forwarded if desired.

WILLIAM JEWETT TUCKER,
President of Dartmouth College.
HANOVER, N. H., Feb. 15, 1894.

PROFESSOR SKEAT'S MONUMENTAL WORK.

THE OXFORD CHAUCER.

THE COMPLETE WORKS OF GEOFFREY CHAUCER. Edited from Numerous Manuscripts by the Rev. WALTER W. SKEAT, Litt.D., LL.D., M.A., Fellow of Christ's College, Cambridge.
In six volumes, demy 8vo, with Portrait and Facsimiles.

NOW READY. VOLUME I.

ROMAUNT OF THE ROSE. MINOR POEMS.

8vo, buckram, Price, $4.00.

The remaining five volumes will be published at short intervals during the present year The complete set of six volumes is offered to subscribers at $17.50 net, payable strictly in advance. Payment in full must accompany each subscription. Subscriptions may be sent in through booksellers if the above conditions are strictly complied with.

*** This edition of Chaucer, by one of the greatest authorities on early English literature, represents the unremitting labor of a quarter of a century. It is the first modern edition which contains the *whole of Chaucer's works.* A complete commentary is furnished, whilst in the notes every difficulty has been considered. The Glossary is of *exceptional* fullness.

THE TEMPLE SHAKESPEARE.

In small, handy volumes.

Edited by ISRAEL GOLLANCZ, M.A. With concise Preface, full Glossary, and such brief Notes as are requisite for the thorough elucidation of the Text, which is that of the Cambridge Edition, the lines being numbered as in the Globe Edition, line for line. Each volume to have a Photogravure Frontispiece—either one of the accepted portraits of Shakespeare, or some topographical illustration connected with his life—and a title-page by WALTER CRANE, with different and appropriate vignette to each. Printed in red and black, on handmade paper. Imperial 32mo, cloth, gilt top, 45 cents: paste grain roan, gilt top, 60 cents.

Volume I. Now Ready.

THE TEMPEST.

And two other volumes will be issued each month, the order of publication being that of the Folio Editions.

JUST PUBLISHED. A NEW NOVEL BY THE AUTHOR OF "THE STICKIT MINISTER."

THE RAIDERS.

Being Some Passages in the Life of John Faa, Lord and Earl of Little Egypt. By S. R. CROCKETT, author of "The Stickit Minister and Some Common Men." 12mo, $1.50.

BY THE SAME AUTHOR. FIFTH EDITION.

THE STICKIT MINISTER AND SOME COMMON MEN.

12mo, $1.50.

"He has a genuine turn for simple but graphic description, and a not inconsiderable fund of pathos, and both are seen to advantage in the sketches he here gives of country ministers, probationers, and street arabs."—*The Academy.*

MR. ZANGWILL'S NEW BOOK.

THE KING OF SCHNORRERS.

GROTESQUES AND FANTASIES. By I. ZANGWILL, author of "Children of the Ghetto," "The Old Maids' Club," "Merely Mary Ann," etc. With numerous Illustrations. 12mo, $1.50.

"Exceedingly clever. . . . Full of that rarest of good qualities, humor—always tinged here with the grotesque, but none the less delightful."—*Boston Daily Traveller.*

"One of the most delightful books of the day."—*The Chicago Herald.*

To be Ready Next Week. Mr. F. MARION CRAWFORD'S New Novel.

KATHARINE LAUDERDALE.

By F. MARION CRAWFORD, author of "Saracinesca," "Pietro Ghisleri," "Mr. Isaacs," etc. With Full-Page Illustrations and Portrait of the author. In two volumes. 12mo, in a box, $2.00.

SOCIAL EVOLUTION.

By BENJAMIN KIDD. 8vo, $2.50.

The scope and importance of this volume may be gathered from some of its chapter-titles, as follows.

The Outlook.
Conditions of Human Progress.
The Central Feature of Human History.
The Function of Religious Beliefs in the Evolution of Society.
Western Civilization.
Modern Socialism.
Human Evolution is Not Primarily Intellectual. Etc., etc.

"The name of Mr. Benjamin Kidd, author of a very striking work on Social Evolution, is, so far as we know, new to the literary world; but it is not often that a new and unknown writer makes his first appearance with a work so novel in conception, so fertile in suggestion, and on the whole so powerful in exposition as 'Social Evolution' appears to us to be."—*The Times* (London).

MACMILLAN & CO., 66 Fifth Avenue, New York.

A. C. McCLURG & CO.'S RECENT BOOKS.

RUSSIA AND TURKEY IN THE NINETEENTH CENTURY.

By Elizabeth Wormeley Latimer, author of "France in the Nineteenth Century, 1830-1890." Handsomely illustrated with 23 portraits of celebrated characters. 8vo, $2.50.

"There would be more readers of works of history if all works of history were written in the glowing, picturesque, and animated style which distinguishes this book."—*Evening Post*, Chicago.

"There is in this book a very large amount of useful and interesting information, skilfully arranged and condensed, and presented in very readable form."—*Public Opinion*, New York.

THE BOOK-HUNTER IN PARIS.

Being Studies among the Bookstalls of the Quays. By Octave Uzanne. With an Introduction by Augustine Birrell, and 144 characteristic illustrations interspersed in the text. Large 8vo, *net*, $5.00.

"The pages are sprinkled with anecdote, with observation of the casual and altogether entertaining sort. M. Uzanne is erudite, sympathetic, enthusiastic; everything but sentimental or dull. He has imbued the whole with his characteristic vivacity."—*New York Tribune.*

THE SPANISH PIONEERS.

By Charles F. Lummis, author of "A New Mexico David," etc. With nine full-page half-tone illustrations. 12mo, $1 50.

"It will be found of real moment to students and richly entertaining to the cursory reader. . . . The book, which, by the way, is amply illustrated, is in every respect worth reading and preserving as a work of reference by students of early American history."—*The Evening Bulletin*, Philadelphia.

RUMOUR.

By Elizabeth Sheppard. With an Introduction and Notes by Harriet Prescott Spofford. With two portraits. 2 vols., 12mo, gilt tops, $2.50.

"'Rumour' glows with the evidence of Miss Shepard's rich musical, and poetic nature. . . . It is a book to which the reader should unquestionably yield himself and enjoy to the fullest. . . . It is the outpouring of the brilliant imagination of a sensitive mind."—*Public Opinion*, Washington.

THE BAILIFF OF TEWKESBURY.

By C. E. D. Phelps and Leigh North. A story of English Life of the Time of Shakespeare. Illustrated. 16mo, $1.00.

"The authors are to be congratulated upon the achievement of a decided success. . . . The tale has plenty of incident, the dialect is well done, and altogether it is in its way a most ingenious and entertaining literary performance."—*Beacon*, Boston.

GARRICK'S PUPIL.

By Augustus Filon. Translated by J. V. Pritchard. A study of London life in the eighteenth century. Illustrated. 16mo, $1 00.

"It is interesting, decidedly so. . . . For change and variety of scene, for interest attaching to the characters, for swift, condensed narrative, it is as thoroughly entertaining, not to say instructive, a b't of fiction as one could wish."—*The Interior*, Chicago.

AN AMERICAN PEERESS.

By H. C Chatfield-Taylor, author of "With Edge Tools." 12mo, $1.00.

"The pictures of English society life are wonderfully strong. . . The style is easy and graceful, and the people are natural and fresh in drawing, which is frequently not the case when English and American types are portrayed together."—*Boston Times.*

LOST CANYON OF THE TOLTECS.

An Account of Strange Adventures in Central America. By Charles Sumner Seeley, author of "The Spanish Galleon" 12mo, $1.00

"This Crusoe-like tale is told in so straightforward a fashion that one is half convinced of its truth, and follows the Northerners through their hairbreadth escapes with active interest It is a book which will make any boy breathless with excitement."—*The Critic*, New York.

For sale by booksellers generally, or will be sent, postpaid, on receipt of the price by the publishers,

A. C. McCLURG & CO.,
CHICAGO.

Cartier to Frontenac.

A study of Geographical Discovery in the interior of North America in its Historical Relations, 1534-1700; with full cartographical illustrations from contemporary sources. By Justin Winsor, author of "Columbus," editor of "Narrative and Critical History of America." 8vo, $4.00.

"It is a great historical work, scientifically constructed. It fitly supplements his 'Christopher Columbus.' The history of discovery from Columbus to Cartier is briefly sketched, and then we have an account, sufficiently detailed for a proper understanding of it, of the explorations of Cartier, Roberval, and Allefonce, with their results. Then came the first abortive attempts at colonization, with those under Champlain which were at last successful at Quebec. Then we have a graphic account of the Missions, the fall and the restoration of Quebec, of the reorganization of government after the death of Champlain, of the discovery of the Mississippi with the explorations of Duluth, Hennepin, of the explorations of La Salle, and the settlements made under his supervision as far southwest as Texas, and of Frontenac's career up to the time of his recall and death. Mr. Winsor gives this history in a clear and comprehensive style which must charm and interest the general reader, but his work also abounds in suggestions for the historian. Its value is greatly increased by its profuse cartographical illustrations from contemporary sources."—Boston Advertiser.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

TERCENTENARY EDITION — JUST READY.

The Tubing Used in Columbia Bicycles

and the structure of a fine bicycle is chiefly tubular,—is of the finest steel, cold drawn and seamless. The cold drawing process insures the greatest amount of toughness and stability, and, although the process by which we make our own special tubing is expensive, no question of expense is ever allowed to enter into the construction of a Columbia.

POPE MFG. CO., Boston, New York, Chicago, Hartford.

The Best Food For Children?

is worthy every parent's study; not only what they can eat, but what gives the most nourishment. No children are better, and most are worse, for eating lard-cooked food. If, however, their food is prepared with the healthful new vegetable shortening,

COTTOLENE

instead of lard, they can eat freely of the best food without danger to the digestive organs. You can easily verify this by a fair trial of Cottolene.

Sold in 3 and 5 lb. pails by all grocers.

Made only by

The N.K.Fairbank Company,

Chicago, Boston, New York, St. Louis, Montreal, Philadelphia, San Francisco.

For Lovers of Flowers

ACCORDING TO SEASON.

Talks about the Flowers in the Order of their Appearance in the Woods and the Fields.

By Mrs. William Starr Dana.
16mo, 75 cents.

Mrs. Dana has already made herself widely and favorably known as a writer on flowers by her former popular book, "How to Know the Wild Flowers." The present volume is on the same subject, describing in an attractive manner the wild flowers which the stroller in field and wood may find at each season of the year.

A Selection of Fifty Plates from "How to Know the Wild Flowers."

Printed on special paper, suitable for coloring by hand. The set in a portfolio, $1.00 *net*.

FOURTEENTH THOUSAND.

HOW TO KNOW THE WILD FLOWERS.

A Guide to the Names, Haunts, and Habits of our Common Wild Flowers. By Mrs. WILLIAM STARR DANA. With over 100 illustrations by Marion Satterlee. Square 12mo, $1.50 *net*.

"It is exactly what has long been wanted by one who loves nature and longs to be formally introduced—so to speak—that is, to know her treasures by name, bnt who has not time to study botany. Your arrangement by colors is a great help to ready reference, and the illustrations are invaluable." —*From* OLIVE THORNE MILLER.

GEORGE C. WITTPENN, Sec.

MACMILLAN & COMPANY'S NEW BOOKS.

JUST PUBLISHED. A NEW NOVEL BY Mr. F. MARION CRAWFORD.

Katharine Lauderdale.

By F. MARION CRAWFORD, author of "Saracinesca," "Pietro Ghisleri," "Mr. Isaacs," etc. With Illustrations by ALFRED BRENNAN and a New Portrait of the author. In two volumes. Small 12mo, in a box, $2.00.

Mr. F. Marion Crawford, in the new novel on which he has been at work during the winter, has forsaken the haunts of Roman life, with its high-born knights and dames, for the more interesting, if seemingly less romantic, scenes of New York. It is always the New York of the upper classes that Mr. Crawford shows to us; and yet, even here, commonplace and conventional as it may be thought, he reveals the same undercurrent of strife and intrigue, of love and jealousy and hatred that lent to his tales of Roman life their peculiar power and fascination. Not even the Saracinesca series are more alive with romance than are this and its companion story which Mr. Crawford promises us, and in which he follows the fortunes of the Lauderdales and Ralstons—the family to which this, his latest heroine, Katharine Lauderdale, belongs. The interest of the book, especially to New Yorkers, will be enhanced by the fact that it is illustrated by a New York artist.

A New Novel by the author of "The Stickit Minister."

The Raiders.

Being Some Passages in the Life of John Faa, Lord and Earl of Little Egypt. By S. R. CROCKETT, author of "The Stickit Minister, and Some Common Men." 12mo, $1.50.

The *Scotsman*, reviewing Mr. Crockett's new and important novel, says: "'The Raiders' is alive and throbbing with the Gallowgian spirit; the strong and wholesome air of the hills and seas of the Stewartry blows through it. . . . Although of wild adventure, there is full measure, heaped up and running over . . . You instinctively know that in its marrow the tale is true—true in the scenery, in the local traits of character, dialect, and customs, and in the human nature which it contains."

By the Same Author. Fifth Edition.

The Stickit Minister and Some Common Men.

12mo, $1.50.

Mr. Zangwill's New Book.

The King of Schnorrers.

GROTESQUES AND FANTASIES. By I. ZANGWILL, author of "Children of the Ghetto," "The Old Maid's Club," "Merely Mary Ann," etc. With numerous Illustrations. 12mo, $1 50.

"Exceedingly clever . . . Full of that rarest of good qualities, humor—always tinged here with the grotesque, but none the less delightful."—*Boston Daily Traveller.*

"One of the most delightful books of the day."—*The Chicago Herald.*

The Delectable Duchy.

Stories, Studies, and Sketches By A. T. QUILLER-COUCH, author of "Naughts and Crosses," "The Blue Pavillions," etc. 12mo, $1.00.

"A remarkable book."—*The Spectator.*

SOCIAL EVOLUTION.

By BENJAMIN KIDD. 8vo, $2.50.

The scope and importance of this volume may be partially gathered from some of its chapter titles, as follows.

The Outlook.
Conditions of Human Progress.
The Central Feature of Human History.
The Function of Religious Beliefs in the Evolution of Society.
Western Civilization.
Modern Socialism.
Human Evolution is Not Primarily Intellectual.

"The name of Mr. Benjamin Kidd, author of a very striking work on Social Evolution, is, so far as we know, new to the literary world; but it is not often that a new and unknown writer makes his first appearance with a work so novel in conception, so fertile in suggestion, and on the whole so powerful in exposition as 'Social Evolution' appears to us to be."—*The Times* (London).

The English Town in the Fifteenth Century.

By ALICE STOPFORD GREEN. 2 vols., 8vo. *Just Ready.*

Sources of the Constitution of the United States.

By the Rev. Dr. C. ELLIS STEVENS. 12mo. *In the Press.*

PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY.

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. With numerous Illustrations and full-page Plates. Royal 8vo, $5.00.

A History of Mathematics.

Price, 25 Cents; $3.00 a Year

CHARLES SCRIBNER'S SONS, = = NEW YORK

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 208 Broadway, N. Y.

TYPEWRITER HEADQUARTERS, } 45 Liberty Street, New York. 186 Monroe Street, Chicago.

G. P. Putnam's Sons,

NEW YORK AND LONDON,

HAVE NOW READY:

A History of Social Life in England.

A record of the progress of the people in religion, laws, learning, arts, science, literature, industry, commerce, and manners, from the earliest times to the present date. Edited by H. D. TRAILL, D.C.L. The work is to be completed in about six volumes. Now Ready, Volume I. From the Earliest Times to the Accession of Edward the First. 8vo, cloth, $3.50. Vol. II. (in press).

The London *Times*, in a special article on this volume, says:

"The History of Social England is a stupendous undertaking, and Mr. Traill has realized his heavy responsibilities Few men are better fitted to edit a work so comprehensive and exhaustive, for his knowledge is exceptionally wide and his intellect is singularly lucid. . . . Naturally it was an important question how so complicated a theme was to be treated. Mr. Traill has decided, as we think wisely, for what may be defined as an encyclopædical social history. There is methodical classification, with a distribution of the subjects among writers whom we may assume to be specialists. . . . A work so comprehensive and of such miscellaneous range of interest might furnish material for a score of articles. We have been compelled to content ourselves with indicating the sources of England's greatness, with the origin and continuous growth of the free institutions on which the national greatness is founded."

The Writings and Correspondence of Thomas Jefferson.

Edited by Paul Leicester Ford. Uniform with the sets of the "Writings" of "Hamilton," "Franklin," "Washington," and "Jay." To be complete in 10 vols., 8vo, half leather, gilt tops. The set, $50.00.

Volume III. now ready.

Limited edition, 750 copies, printed from type.

"The importance of the edition does not lie wholly in the form in which it is published or in the care with which the contents have been brought together and annotated. Mr. Ford has included in it a large mass of matter either new to print or new to an edition of Jefferson's writings."—*New York Times.*

The Industries of Russia.

Manufactures and Trade—Agriculture and Forestry—Mining and Metallurgy—Siberia and the Great Siberian Railway.

Prepared by the Russian Department of Trade and Manufactures, Ministry of Finance, and by the Department of Agricultural Ministry of Crown Domains.

Editor of the English Translation,
JOHN MARTIN CRAWFORD, U. S. Consul-General to Russia.

With many maps printed in colors, charts, and statistical tables.

Volumes I. and II.—Manufactures and Trade.
Volume III.—Agriculture and Forestry.
Volume IV.—Mining and Metallurgy.
Volume V.—Siberia and the Great Siberian Railway.

5 vols., octavo, paper covers, $6 00.

As a monumental and exhaustive work on the Russian industries has never before been attempted in the English language, it is thought that this work, in the preparation of which the Russian Government has long been interested, will prove invaluable to all those who are in any way interested in the resources, trades, industries, and wealth of Russia.

We have been appointed by the Russian Government the agents for the above work, a limited number of copies of which have been placed in our hands for sale.

*** *Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

HOUGHTON, MIFFLIN & CO.'S

NEW BOOKS.

An Island Garden.

By CELIA THAXTER, author of "Among the Isles of Shoals." etc. With twelve full-page Illustrations in color, and several smaller ones, by CHILDE HASSAM. 8vo, attractively bound, $4.00, *net*.

Mrs. Thaxter, who has spent a large part of her life on Appledore, the largest of the Isles of Shoals, here tells the secret of the flower-garden by her cottage which is one of the chief attractions of the islands and the wonder of the thousands who visit them every summer. Colored Illustrations add greatly to the attractiveness of the engaging volume.

Brave Little Holland, and What She Taught Us.

By WILLIAM ELLIOT GRIFFIS, D.D., author of "Japan," "The Lily Among Thorns," "Matthew Calbraith Perry," etc. With Illustrations. 16mo, $1.25. In *Riverside Library for Young People*, small 16mo, 75 cents.

By three visits to Holland, and careful study of Dutch-American archives, Dr. Griffis has gained material for a very interesting account of Holland and the debt we owe her for her contribution to American liberty and order.

Bayou Folk.

By KATE CHOPIN. 16mo, $1.25.

A pretty book of tales drawn from life among the Creoles and Acadians of Louisiana. They represent with fidelity and spirit characters and customs unfamiliar to most readers; they are admirably told, with just enough dialect for local color; and they can hardly fail to be very popular.

A Bird-Lover in the West.

A delightful book of bird experiences and observations in Ohio, Utah, and Colorado, by OLIVE THORNE MILLER, author of "In Nesting Time," "Bird-Ways," "Little Brothers of the Air," etc. 16mo, $1.25.

Does God Send Trouble?

By CHARLES CUTHBERT HALL, D.D., of Brooklyn, author of "Into His Marvellous Light." Crown 8vo, $1.00.

Dr. Hall describes this book as "an earnest effort to discern between Christian tradition and Christian faith." It is dedicated "to all who sorrow over the sorrows of humanity."

Zachary Phips.

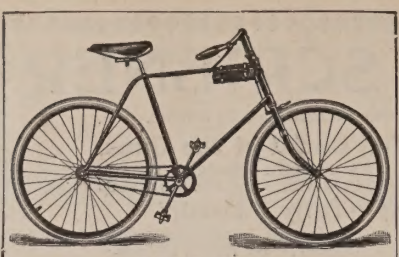
By EDWIN LASSETTER BYNNER. *Riverside Paper Series*. 50 cents.

A notable historical novel, including Burr's rebellion, the battle of New Orleans, and other important incidents.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.



Model 34

COLUMBIA,

Price, $125.

A new machine in many important points of design and construction, retaining also the best features of previous light Columbias. It is regularly fitted with an easily detachable front wheel brake, rat-trap pedals, and either single or double tire as ordered. Weight 30 pounds with, 29 without brake.

Full description in Columbia catalogue, which is furnished free by Columbia agents, or mailed for two two-cent stamps.

POPE MFG. CO.,

Boston. New York. Chicago. Hartford.

MT. DESERT.

TO LET, FURNISHED—Two houses, at $250 and $300, for season. Each has bath-room, hot and cold water (no pumping), kitchen, living-room (open fire), and balconies on three sides. First has three large chambers (one fireplace) and nursery (stove); second has four chambers (one fireplace) and large dining-room. Best hair mattresses, wire screens. Houses situated at Seal Harbor (P. O.), five miles east of N. E., and nine miles west of Bar Harbor. Wood and coal on premises. $100 must be paid when house is engaged. Address W. M. Griswold, Cambridge, Mass.

"Very important and very interesting Memoirs."—London Saturday Review.

A Notable Addition to Napoleonic Literature.

THE PASQUIER MEMOIRS.

The Revolution—The Consulate—The Empire.

Edited by the Duc d'Audiffret-Pasquier. Three volumes, with Portrait. 8vo. Vol. II., 1812-1814, now ready, $2.50. Vol. I., 1789-1812, $2.50.

"A rich mine of information. Pasquier's book is of as great interest as importance. His position enabled him to see much; his intelligence and his training made his comprehension thorough and his conclusions of value."—*N. Y. Times.*

FROM THREE NOTABLE REVIEWS.

The Edinburgh Review.

"The author brings before us, in a hundred passages, and illustrates with peculiar clearness, the characteristics of an extraordinary time; he gives us vivid and thoughtful sketches of the First Empire and its stirring events. His description of the aristocratic life of old France is very attractive and deserves attention; his picture of the Revolution and its terrible scenes is true and lifelike; his portraits of Napoleon and the Bonaparte family, and of most of the leading personages around his throne are well designed and for the most part correct."

The Atlantic Monthly.

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period. Pasquier's account of the Empire is surely one of the best that any contemporary has left us. It will be found rich in material concerning the imperial régime, and in portraits of Napoleon's family and associates."

M. W. Hazeltine, in *N. Y. Sun.*

"Since the record of Madame de Rémusat's observations was given to the world, no light so copious and searching has been thrown upon the Napoleonic era as is cast by this volume."

CHARLES SCRIBNER'S SONS, 743 & 745 Broadway, N. Y.

EUROPEAN PARTIES

TO LET, furnished for the summer, a new 9-roomed cottage near and overlooking Lake Chocorua. Address M. G. S., 107 Irving St., Cambridge, Mass.

NO THOUGHTFUL READER'S LIBRARY

Can be considered complete unless it contains these remarkably brilliant, scholarly, and popular works on important and interesting subjects by

FRANCIS W. UPHAM, LL.D.

The Wise Men:

Who They Were and How They Came to Jerusalem.

"On the question as to the Magi, Dr. Upham has bestowed an examination at once scholarly and thorough, has removed all difficulty, and has invested the whole subject with singular interest. The volume has our earnest commendation."—*British Quarterly Review.*

12mo. Cloth, 80 Cents.

The Star of Our Lord.

With Thoughts on Inspiration and the Astronomic Doubt as to Christianity.

"This book abounds in sublimities and beauties. 'The Astronomic Doubt as to Christianity' is a treatise of great value, and the exposition of the Eighth Psalm is a specimen of the highest style of exegesis. Dr. Upham's thoughts on the death of the children at Bethlehem and his argument thence to THE SALVATION OF ALL INFANTS ARE NOVEL AND CONCLUSIVE. But we cannot emphasize one part above another. It is a rich and precious contribution to the literature of a true Christianity."—HOWARD CROSBY, D.D., LL.D., *late Chancellor of the University of the City of New York.*

12mo. Cloth, $1.00.

Thoughts on the Holy Gospels:

How They Came to be in Manner and Form as They Are.

CYRUS HAMLIN, D.D., LL.D., thirty years Missionary in the Ottoman Empire and first President of Robert College, Constantinople, says: "It is better than any commentary or any of the 'Introductions' I have read. Modern writers breathe another life than that of the East. They do not comprehend it. They do not enter into it. I think no one has achieved this to the degree which Dr. Upham has. To all who will give time to the book it will be rich in blessing, and they will read the Gospels with renewed interest, with increase of faith and joy."

12mo. Cloth, $1.00.

St. Matthew's Witness to the Words and Works of the Lord.

"This book is not based on the opinions of others. It shows complete mastery of details, and the author is irresistible in showing that the Gospel was written according to a preconceived plan."—DR. MENDENHALL, *the late Editor of the Methodist Review.*

12mo. Cloth, $1.20.

OTIS O. HOWARD, Major-General U. S. Army, says: "I have gained so much positive truth from these books that the Gospels are a new revelation to me. They solve many problems heretofore unsolved. These facts have made me earnestly bent on making them better known."

PUBLISHED BY

HUNT & EATON, 150 Fifth Avenue, New York.

LONGMANS, GREEN, & CO.'S NEW BOOKS.

'Sharps and Flats.'

A Complete Revelation of the Secrets of Cheating at Games of Chance and Skill.

By JOHN NEVIL MASKELYNE

Of the Egyptian Hall, London.

With 4 Plates and 62 Illustrations in the 'Text.' Crown 8vo, cloth, ornamental, $1.50.

CONTENTS.—I. Introductory—II. Common Sharpers and their Tricks—III. Marked Cards and the Manner of their Employment—IV. Reflectors—V. Holdouts—VI. Manipulation—VII. Collusion and Conspiracy—VIII. The Game of Faro—IX. Prepared Cards—X. Dice—XI. High Ball Poker—XII. Roulette and Allied Games—XIII. Sporting House—XIV. Sharps and Flats—Postscript.

*** This book constitutes a complete exposure of the methods and devices employed in cheating at the present day, and a revelation of the whole of the secrets of the modern gaming sharp. It is a work absolutely unique of its kind, nothing at all approaching it having ever before been published in any language.

Apart from its value as a warning to those who are addicted to any form of gambling, it is a book which will prove, it is hoped, of the utmost interest to the general public, showing, as it does, the capabilities of trickery. Swindling of any kind is only rendered possible by the fact that the public have so little knowledge of what can be accomplished by unfair means, and this applies more particularly perhaps to unfair practices in play than to any other subject

A True Relation of the Travels and Perilous Adventures of Mathew Dudgeon, Gentleman:

Wherein is truly set down the Manner of his Taking, the Long Time of his Slavery in Algiers, and Means of his Delivery. Written by Himself, and now for the first time printed. Crown 8vo, $1.75.

Pictures in Prose of Nature, Wild Sport, and Humble Life.

By AUBYN TREVOR BATTYE, B.A., Member of the British Ornithologists' Union. With Frontispiece and Vignette. 12mo, $1.75.

The Diary of Colonel Peter Hawker.

Author of "Instructions to Young Sportsmen." With an Introduction by Sir RALPH PAYNE-GALLWEY, Bart. With 2 Portraits and 8 Illustrations, taken from "Instructions to Young Sportsmen." Two vols., 8vo, $9.00.

This Diary only contains extracts from its original, the whole of which, if given intact, would fill several more volumes.

Though the entries are mainly devoted to sporting details, the editor gives several interesting extracts from the Diary relating to visits paid by Col. Hawker to the Continent, both before and after the fall of Napoleon. The one great passion of Col Hawker's life beyond shooting was music, and he was well acquainted with the most celebrated pianists and operatic artists of his day. He describes himself in the Diary as being both "shooting mad and music mad."

THE FUR AND FEATHER SERIES.

Edited by A. E. T. WATSON.

The Partridge:

Natural History. By the Rev. H. A. MACPHERSON.
Shooting. By A. J. STUART WORTLEY.
Cookery. By GEORGE SAINTSBURY.

With 12 Illustrations by A. Thorburn, C. Stuart-Wortley, and C. Whymper. Crown 8vo, $1.75

A History of the Papacy During the Period of the Reformation.

By MANDELL CREIGHTON, D.D., LL.D., Lord Bishop of Peterborough. Vol. V. The German Revolt, 1517-1527. 8vo, 396 pages, $5.00.

*** Vols. I. and II., 1378-1464, $10.50. Vols. III. and IV., 1464-1518, $8.00.

The Elements of English Constitutional History from the Earliest Time to the Present Day.

By F. C. MONTAGU, M.A., Professor of History, University College, London, late Fellow of Oriel College, Oxford. 12mo, $1.25.

Legends of the Micmacs.

By the Rev. SILAS TERTIUS RAND, D.D. With Introduction by Helen L. Webster, Ph.D., Professor of Comparative Philology in Wellesley College. (Wellesley Philological Publications.) 8vo, xlvi-452 pages, $3.50.

Australia as It Is;

Or, Facts and Features, Sketches and Incidents of Australia and Australian Life. With Notices of New Zealand. By a Clergyman, Thirteen Years Resident in the Interior of New South Wales. Third Edition. 12mo, $1.75.

Varieties in Prose.

By WILLIAM ALLINGHAM. Three vols., crown 8vo, $6.00. Vols. I. and II.—Rambles by Patricius Walker. Vol. III.—Irish Sketches, etc.

"These essays and descriptive papers are happily named. Various, indeed, are they in scope as in value and interest. There is a peculiar charm, which we have proved once more to be an abiding charm, for us in these delightful records of impressions of places at home and abroad, their antiquities, history, and literary or artistic associations."—*Saturday Review.*

The Nation

Is published every week at Broadway and Fulton Street. It was founded by E. L. Godkin in 1865, and Mr. Godkin is still the editor.

THE NATION is an independent weekly review of literature, science, art, and politics, with a serial commentary on the most important American and foreign events, special and occasional correspondence, editorial and miscellaneous articles on prominent political and social topics, and thoroughly competent criticism of the latest developments of literature, science, art, music and the drama. The two hundred contributors who prepare this feast for the scholar and the thinker include the foremost names in American literature and thought, besides many famous men in England and France, Germany and Italy, South America and Japan. THE NATION has been pronounced by the *Saturday Review* to be "on the intellectual level of the best European periodicals." It has a large and widely distributed circulation in all the States of the Union and in foreign ports. The development of that class of independent voters who control the balance of power in several Northern States is largely the work of THE NATION, which has always fought for purity, wisdom, and independence in public life, and for honesty and integrity in legislation.

Subscription, $3.00 a year, postpaid; shorter term at a proportionate rate.

Sample copy sent free on application.

TO ADVERTISERS.

The weekly circulation of THE NATION is about 10,000 copies. This number represents, however, but a portion of the actual readers of the journal, as it goes to all the leading libraries and reading-rooms throughout the country, and to the homes of people of intelligence and means everywhere. It stands alone in its field. The announcements of the leading publishers are a feature of THE NATION, which contains more book-advertising than any other weekly paper. Prominent financial houses, the best schools, and other high-class advertisers of all kinds use its columns constantly. The utmost care is taken to exclude all unpleasant or unworthy advertising.

Advertising rates or other information given on application.

206 to 210 Broadway, New York City.

FOR LOVERS OF FLOWERS.

According to Season.

Talks about the Flowers in the Order of their Appearance in the Woods and the Fields. By Mrs. WILLIAM STARR DANA. 16mo, 75 cents.

"The charm of this book is pervading and enduring as is the charm of nature."—*N. Y. Times.*

"Most charming. A fitting supplement to Mrs. Dana's previous book, and the two together constitute one of the most truly delightful descriptive studies of nature which has made its appearance in recent years."—*Boston Advertiser.*

FOURTEENTH THOUSAND.

How to Know the Wild Flowers.

A Guide to the Names, Haunts, and Habits of Our Common Wild Flowers. By Mrs. WILLIAM STARR DANA. With over 100 illustrations by Marion Satterlee. Square 12mo, $1.50 *net.*

"It is exactly what has long been wanted by one who loves nature and longs to be formally introduced. . . . Your arrangement by colors is a great help to ready reference, and the illustrations are invaluable."—*From Olive Thorne Miller.*

A SELECTION OF FIFTY PLATES FROM

"How to Know the Wild Flowers."

Printed on special paper, suitable for coloring by hand. The set in a portfolio, $1.00 *net.*

Beyond the Rockies.

A Spring Journey in California, By Dr. CHARLES A. STODDARD, Editor of *The Observer.* Illustrated. 12mo, $1.50.

This new book by the author of those two popular volumes of travel, "Across Russia" and "Spanish Cities," gives Dr. Stoddard's experiences, and describes the interesting places he visited in a journey by the southern route to California, to all the beauties and wonders of which he brings an appreciative mind and a fresh eye.

Josiah Gilbert Holland.

A Memoir. With portraits and illustrations. By Mrs. H. M. PLUNKETT. 12mo, $1.50.

Mrs Plunkett's long friendship with Dr. Holland makes her specially fitted for the task of describing the sources of his great and lasting influence with the "plain people." An unusual interest also attaches to the biographical narrative, which describes his early struggles, his prompt successes in various educational and literary fields, his own views of his aims and accomplishment, and the testimony of his contemporaries to their elevation and importance.

On the Offensive.

An Army Story. By GEORGE I. PUTNAM. 12mo, $1.25.

Mr. Putnam's new army story is varied and adventurous in character, including among its exciting incidents a hunting trip and an expedition against the Indians. The story, like the author's "In Blue Uniform," has a thread of sentiment and presents with rare fidelity an interesting picture of Army life on the plains.

A NOTABLE CONTRIBUTION TO NAPOLEONIC LITERATURE.

The Pasquier Memoirs.

The Revolution.—The Consulate.—The Empire. Edited by DUC D'AUDIFFRET-PASQUIER. With portraits. In 3 vols., 8vo. Vol. II., 1812-1815, now ready, $2.50; Vol. I., 1789-1812, $2.50.

"Its value is great. The author brings before us and illustrates with peculiar clearness the characteristics of an extraordinary time. He gives us vivid and thoughtful sketches of the First Empire."—*Edinburgh Review.*

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period."—*Atlantic Monthly.*

Life and Letters of Dean Stanley.

By R. E. PROTHERO. With the coöperation of Dean Bradley, *Second Edition.* With portraits and illustrations. 2 vols., 8vo, $8.00.

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well-nigh indispensable"—*Boston Journal.*

"This biography is perhaps the most notable work of its kind since Dean Stanley's own life of Dr. Arnold appeared. The work passes at once into the list of the few great biographies of modern times"—*Boston Herald.*

The Barbary Coast.

By HENRY M. FIELD. Illustrated. 8vo, $2.00.

"Alert and interesting travel observations. It abounds in picturesqueness of description and illustration of nearly all portions of the once great empire of the Moors."—*Brooklyn Eagle.*

The Land of Poco Tiempo.

By C. F. LUMMIS. Illustrated. 8vo, $2.50.

"A series of interesting sketches of New Mexico. They are picturesque, poetic, glowing in local color, and have a genuine ethnological value, truth in every touch, showing familiarity with the country, the people, and their traditions."—*Chicago Inter-Ocean.*

Men, Women, and Books.

Essays by AUGUSTINE BIRRELL, M.P. Elzevir 16mo, gilt top, $1.00.

"Augustine Birrell has won for himself an enviable reputation as an essayist, and his new volume will add to it. His pen sketches are wonderfully graphic."—*Boston Advertiser.*

The Jacobean Poets.

By EDMUND GOSSE. University Series. 12mo, $1.00 *net.*

"Mr. Gosse is methodical and painstaking and exact. His views are moderate, and it is an excellent plan to set off the poets who distinctively belong to the reign of James I. from their Elizabethan predecessors."—*New York Tribune.*

KINDERGARTEN SUPPLIES *at Schermerhorn's, 3 East 14th St., N. Y.*

The Heart of Oak Books.

A series of Readers for Home and School. In five volumes. Edited by Professor Charles Eliot Norton of Harvard University and Miss Kate Stephens. This series comprises an ample selection of the literature which is the common inheritance of the whole English-speaking race. It is composed mainly of the reading which has been familiar to past generations, and which has become part of the intellectual life of the race. Beginning with old childish rhymes and jingles, with simple saws and proverbs, with the most widely known fables and the most popular poems of childhood, it embraces in the later volumes the stories that have long been favorites, the minor poems that are universally accepted as permanent treasures of the language, and characteristic essays and extracts from the works of the best writers of the past three centuries. The series is intended to give to every child some knowledge of the best contents of the noble treasury of English literature, to make him a sharer in the thought and memories of his race, and to cultivate his imagination as well as his intelligence.

"For the purpose of training the child in the art of reading, *good literature sticks in the memory* when the lean has faded away; the child that has been given something notable to read, when learning the art, has practised true economy, for it has stored a force as well as acquired an art."—HORACE E. SCUDDER in *Atlantic Monthly*.

RECENTLY PUBLISHED.

A New and Important Work by Judge Dillon.

The Laws and Jurisprudence of England and America.

BEING A SERIES OF LECTURES DELIVERED BEFORE YALE UNIVERSITY.

BY JOHN F. DILLON, LL.D.,

Storrs Professor, Yale University, 1891–1892.
1 vol., 8vo, Cloth, $4.00 *net.*

Among important new publications is a work by Hon. John F. Dillon, author of the unrivalled treatise on the Law of Municipal Corporations.

The book consists of a series of twelve lectures given by Judge Dillon at Yale University, in 1892, upon Our Law in its Old Home, England, and in its New Home, the United States. They have been carefully annotated by the author, for purposes of further illustration and development. The book deals with nearly all of *the great living questions connected with our Laws and Jurisprudrnce, such as*

legal education, trial by jury, judicial tenure, the origin, development, and characteristics of the common law, written constitutions, legislation, case law, the law reports, judicial precedents, codification, and legal reform.

Although these subjects are presented in a popular way, and with an endeavor to surround them with their appropriate historical and literary accompaniments, the real purpose is always a serious purpose, having in view practical ends and results. The discussions are not intended alone for students of the law, but for the practising lawyer as well; and they contain throughout a free expression of the author's views. In fact, the book was designed as a vehicle in which to convey the author's matured opinions, formed as the result of his studies and reflections, and of his experience of forty years at the bar and upon the bench. The work is unique in our legal literature, both in design and mode of execution.

"The arrangement of the book is excellent, its style is clear, and it is in all respects a desirable and a useful manual for students."—*Saturday Evening Gazette, Boston.*

Hill's Foundations of Rhetoric.

The Foundations of Rhetoric. By ADAMS SHERMAN HILL. Pp. 346. 12mo, Cloth, $1.00; by mail, $1.10.

"I do not like to write opinions of text-books in ordinary cases, but this book is so full of valuable devices to develop in the student a critical knowledge of the best usages of an English style that I am very glad to say a word commending it to all schools seeking a good text-book in English Composition."—*Hon. W. T. Harris, U. S. Commissioner of Education.*

Hill's Our English.

Our English. By ADAMS SHERMAN HILL, Boylston Professor of Rhetoric and Oratory in Harvard University. pp. viii., 246. 16mo, Cloth, $1.00.

Professor Hill is an acknowledged authority upon the use of our language. In this work he gives chapters on English in schools, in colleges, in newspapers, and novels, in the pulpit, and on colloquial English.

Rolfe's Edition of Shakespeare (40 volumes).

Edited with Notes by WILLIAM J. ROLFE, A.M. Illustrated. 16mo, Flexible Cloth, 56 cents; by mail, 62 cents per volume. Paper, 40 cents; by mail, 44 cents per volume.

"I have not seen any edition that compresses so much necessary information into so small a space, nor any that so completely avoids the common faults of commentaries on Shakespeare—needless repetition, superfluous explanation, and unscholar-like ignoring of difficulties."—*Rev. Edwin A. Abbott (Author of the 'Shakespearean Grammar'), City of London School, England.*

Rolfe's English Classics.

Goldsmith's Select Poems.—Browning's Select Poems.—Milton's Minor Poems.—Gray's Select Poems.—Browning's Dramas.—Macaulay's Lays of Ancient Rome.—Wordsworth's Select Poems. Edited, with Notes, by WILLIAM J. ROLFE. Illustrated. 16mo, Flexible Cloth, 56 cents; by mail, 62 cents per volume. Paper, 40 cents; by mail, 44 cents per volume.

"Readers will find an immense amount of knowledge in his elegant volumes, all set forth in the most admirable order and breathing the most liberal and enlightened spirit, he being a warm appreciator of the divinity of genius. It is a most satisfactory series."—*Boston Traveller.*

Rolfe's Select English.

Scott's Tales of Chivalry, 36 cents; by mail, 42 cents.—Tales from English History, 36 cents; by mail, 42 cents.—Tales from Scottish History, 50 cents; by mail, 56 cents.—Fairy Tales, 36 cents; by mail, 42 cents.—Lamb's Tales from Shakespeare, Comedies, 50 cents; by mail, 58 cents.—Tragedies, 50 cents; by mail, 58 cents. Edited, with Notes, by WILLIAM J. ROLFE. Illustrated. 16mo, Cloth.

"Of Mr. Rolfe's qualifications for this kind of work there is no occasion that we should dwell for a moment—they are so widely recognized by scholars and men of letters."—*N. Y. Mail and Express.*

Harper's School Classics.

A series of volumes for Supplementary Reading, including History, Biography, Poetry, Fiction, and Miscellany by the best authors. Thirty-five volumes now ready. 32mo, Bound in Cloth, 30 cents each; by mail, 34 cents.

(A handsome illustrated 12-page circular, descriptive of these and other books for Supplementary Reading, will be sent by the publishers upon application.)

Swinton's Studies in English Literature.

Studies in English Literature, being Typical Selections of British and American Authorship, from Shakespeare to the Present Time; together with Definitions, Notes, Analyses, and Glossary, etc. By Professor WILLIAM SWINTON. Pp. 672. With Portraits. Crown 8vo, Cloth, $1.20; by mail, $1.40.

"Collections of typical passages from the writings of the masters in English literature are many, but we have seen none which seemed to us to be so judiciously made or so well adapted to the use of high schools as the work prepared by Mr. William Swinton. . . . The selections are well chosen, the notes are judicious and helpful, and in general the work is admirably fit for its purpose."—*N. Y. Evening Post.*

Miss Phillips's Manual of English Literature.

A Popular Manual of English Literature. Containing Outlines of the Literature of France, Germany, Italy, Spain, and the United States of America. With Historical, Scientific, and Art Notes. By MAUD GILLETTE PHILLIPS. Illustrated. Vol. I., pp. 604. Vol. II., pp. 576. Index to each volume. Crown 8vo, Cloth, $2.00 per volume; by mail, $2.16. *The volumes sold separately.*

"There certainly can be little doubt as to the value of the two volumes. . . . It is a most exhaustive compilation of all that is fitted to throw into relief, or to give light, shade, or color to the life and works of writers who have had a marked influence upon English thought."—*Boston Daily Advertiser.*

Johnson's English Words.

An Elementary Study of Derivations. By CHARLES F. JOHNSON, Professor of English Literature, Trinity College, Hartford. Pp. 261 16mo, Cloth, 84 cents; by mail, 92 cents.

"Modest in size, but packed from cover to cover with information about the history of words used in the English of to-day."—*Rochester Herald.*

"Pretty certain to lead the way to a more serious study of our language, not only in the school but in the home circle as well, its modest size and untechnical character strongly commending it for the latter use."—*Southern Educator, Durham, N. C.*

Fowler's English Language.

The English Language in its Elements and Forms. With a History of its Origin and Development. Designed for Use in Colleges and Schools. Revised and Enlarged. By WILLIAM C. FOWLER, LL.D. Pp. 796. 8vo, Cloth, $1.75; by mail, $1.95.

"By far the most important and valuable work on English grammar extant."—Prof. JOHN S. HART, LL.D.

"A work of rare excellence and of high utility."—Rev. THOS. H. SKINNER, D.D.

Special rates for introduction into Schools will be quoted for above books on request. Instructors are invited to write for information.

HARPER & BROTHERS, Franklin Square, New York.

MACMILLAN & CO.'S NEW BOOKS.

JUST PUBLISHED.

A New Novel by the Author of "Robert Elsmere."

MARCELLA.

By Mrs. HUMPHRY WARD, author of "The History of David Grieve," "Robert Elsmere," etc., etc. With new Portrait. In two volumes, small 12mo. Cloth, in box, price $2.00.

"In 'Robert Elsmere' and 'David Grieve' a great talent was at work; but the question whether behind the talent there was that originating force which we call genius, was left unanswered. In 'Marcella' that question is answered beyond a doubt . . . 'Marcella' marks a long advance in the art of novel-writing. . . . Mrs Ward has worked through her culture and found herself; she speaks, at last, in clear, resonant tones, out of the depths of her own nature, and her voice is the voice of an artist by the grace of God as well as by the nurture of the schools. In 'Marcella,' as in the earlier stories, Mrs. Ward's task is to dramatize the strife of the soul with its inheritance and its conditions. . . . It is certainly no accidental interest in what are called burning questions which drew Mrs. Ward . . . to that social problem which overshadows society, and lies on so many hearts not only as an intolerable mystery but as an intolerable burden. . . . Her real interest is in the problem of the personal life. . . . In 'Marcella' Mrs. Ward presents the question of the day in strict subordination to its influence on the nature and destiny of a girl of brilliant temperament, deep feeling, intense idealism, and noble but impetuous and untrained character. She exhibits the social revolution as it touches a personality of native force and artistic sensitiveness . . . It is with these subtler contacts . . . that art legitimately deals, and it is these aspects of the modern problem which are set forth with marvellous vividness and power in the story of Marcella's career."—Mr. HAMILTON W. MABIE, in the *Forum* for April,

MARCELLA.

By Mrs. HUMPHRY WARD.

"So many words about the problem with which the story deals must not be suffered to convey the impression that 'Marcella' is only another social study; it is dramatic in the deepest sense from beginning to end, and more than once its dramatic movement rises to a great height. There are passages and scenes in it which, in force and intensity, come very near the greatest things in English fiction. Indeed, the special quality of the story is the passion which vibrates through it; a passion for truth, a passion of sympathy, and at the end a passion of love. The narrative is full of strongly drawn figures; men who live in their emotions no less than in their convictions and interests, and whose processes of thought are disclosed with a force and reality that constantly recall the masters of the novel."—Mr HAMILTON W. MABIE in the *Forum* for April.

OTHER WORKS BY MRS. HUMPHRY WARD.

The History of David Grieve.

12mo. Cloth extra, $1.00. Also a Library Edition, uniform with the Library Edition of "Robert Elsmere." 2 vols. 12mo, $3.00.

By FLORA ANNIE STEEL. 12mo. *In the Press.*

IMPORTANT WORKS ON SOCIAL AND HISTORICAL SUBJECTS.

Social Evolution.

By BENJAMIN KIDD. 8vo, $2.50.

"The name of Mr. Benjamin Kidd, author of a very striking work on Social Evolution, is, so far as we know, new to the literary world; but it is not often that a new and unknown writer makes his first appearance with a work so novel in conception, so fertile in suggestion, and on the whole so powerful in exposition as 'Social Evolution' appears to us to be. . . . A book which no serious thinker should neglect, and no reader can study without recognizing it as a work of a singularly penetrating and original mind."—*The Times* (London).

The English Town in the Fifteenth Century.

By Mrs. J. R. GREEN, author of "Henry the Second." (Twelve English Statesmen Series.) 2 vols., 8vo. *Just Ready.*

IRISH IDYLLS.

The Sixth Edition. By JANE BARLOW. American copyright edition. 12mo, cloth, $1.25.

"Very delightful reading."—*London Athenæum.*

"It is difficult to read Miss Barlow's book without laughing lips and a sobbing breast. She has the touch of an artist."—*London Daily News.*

"She has the gift of tenderness, of true and simple pathos, and the humor is truly delightful."—*The Bookman.*

"The most charming descriptions of Irish life."—*Spectator.*

"A volume which describes Irish peasant life with a fidelity which has never been surpassed, and in a manner to draw sympathy from every eye."—*James Payne in The Illustrated London News.*

COURAGE.

A new book by CHARLES WAGNER, author of *Youth*. A book of rare power and absorbing interest. It will make upon thoughtful minds an impression as great as that which has been made by *Youth*. Translated by Cora Hamilton Bell. 12mo, $1.25.

YOUTH.

Second Edition. By CHARLES WAGNER. 12mo, $1.25.

"It is a very noble book written with great ability, full of insight, keen and comprehensive, and heavily charged with that best of literary qualities, enthusiasm. It is a fine combination of profound thought and tremendous earnestness."—*Rev. T. T. Munger, D.D.*

THE POETS AND THE POETRY OF THE CENTURY.

A Popular Encyclopædia of Modern Poetry, covering the area of Greater Britain and the limits of the Nineteenth Century. Edited by Alfred H. Miles. In eight volumes, completing the scheme of the work from George Crabbe to Rudyard Kipling. Small 8vo, per set, $12.00.

The plan of the work is to represent each poet in his variety, giving such biographical details as may illustrate the verse, with a critical summary of the poetic qualities of the work. Critical and biographical notices are by such writers as Dr. F. J. Furnivall, J. Addington Symonds, Buxton Forman, Austin Dobson, Robert Bridges, Alex. H. Japp, and others.

"The work bids fair to become not only the most voluminous anthology of the time, but also one of the most important." "A more wealthy volume of poetry, page for page, scarcely exists. It is, indeed, 'infinite riches in a little room.' The special feature of this volume—and it is a feature which cannot fail to attract great attention—lies in the series of articles devoted to the Tennyson group."—*The Athenæum.*

THE EMPRESS EUGENIE.

By PIERRE DE LANO. Translated from the seventh French Edition. 12mo, cloth.

This is the first in a series of volumes giving a new and most interesting view of the Emperor Napoleon III. and his time. They are crowded with anecdote and gossip of the period. The series appears under the general title of "The Secret of the Empire." The first volume will be ready in April.

INTENTIONS.

By OSCAR WILDE. New and cheaper edition. 12mo, handsomely printed, $1.50.

CONTENTS: The Decay of Lying. Pen, Pencil, and Poison. The Critic as Artist. The Truth of Masks.

A NEW VOLUME IN THE MILDRED SERIES.

Entitled, "Mildred's New Daughter," by MARTHA FINLEY, author of the Elsie Books. The previous volumes in this series are Mildred Keith, Mildred at Roselands, Mildred's Married Life, Mildred and Elsie, Mildred at Home, Mildred's Boys and Girls. Each 16mo, $1.25.

PROVERBS IN PORCELAIN.

Large Paper Edition, to which is added *Au Revoir*, a Dramatic vignette by AUSTIN DOBSON, with illustrations by BERNARD PARTRIDGE, with impressions of the illustrations in text on India paper. The full pages on "Imperial Japan." Price-$12.00 net.

The plain edition of this charming book was published in November. Mr. Partridge is believed by many to be the coming foremost illustrator in England. But seventy-five copies of the limited edition were allotted to America.

SERMONS ON FAITH, HOPE, AND LOVE, with Horæ Homileticæ.

By Prof. JAS. M. HOPPIN of Yale College. Second edition, revised and enlarged. Small 8vo, cloth. Price, $1.50.

THE JOURNAL OF MARTHA PINTARD BAYARD.

London, 1794–1797. Edited by S. BAYARD DOD. With two portraits in photogravure. Printed on Dickinson deckled edge paper. The typography by De Vinne. A dainty book. 16mo, $1.50.

The journal is a record of Mrs. Bayard's life for three years in London, where she had exceptional opportunities for knowing persons of highest rank in the society of that day.

LINKS IN A CHAIN.

By MARGARET SUTTON BRISCOE, author of *Perchance to Dream*. 16mo, $1.00.

The Royal Natural History.

Edited by Mr. RICHARD LYDEKKER, B.A., F.G.S., F.Z.S., joint author of "An Introduction to the Study of Mammals," etc. The Preface by P. L. Sclater, M.A., Ph.D., F.R.S., Secretary of the Zoölogical Society of London.

This work is entirely new, and will include the four orders of creation; thoroughly abreast of the age, full, accurate, and readable, and abounding in anecdote. Its arrangement is such that, when bound, the various orders can be readily consulted, and its PICTORIAL ELEMENT will be such as to place it at once in the first rank of works of this nature—some 1,600 engravings, many full-page, as well as 72 full-page colored illustrations, will be comprised in the work when finished.

This portion of the Library will occupy 36 monthly numbers, and will be published at 50 cents a month. Subscriptions, payable in advance, $5.50 per annum, or the 36 numbers for $15.00, mail free.

*** *We shall have ready very shortly a complete and superb 16-page prospectus, which will be supplied on application.*

A New and Condensed History of England.

History of England and the British Empire.

A Record of Constitutional, Naval, Military, Political, and Literary Events from B. C. 55 to A. D. 1890, by EDGAR SANDERSON, M.A., late Scholar of Clare College, Cambridge; author of "Outlines of the World's History," etc. With tinted maps and genealogical tables. In one handsome 8vo volume, 1,134 pages, cloth, $3.00.

A detailed prospectus free on application.

*** No one of the various departments of National Life, which in the sum make history, has been ignored; Literature, Science, Art, Commerce, and Geographical Discovery have all come under review. An excellent series of specially prepared maps showing the great territorial changes at different times are placed at appropriate dates throughout.

"To us the comprehensiveness and condensation of the work are nothing less than wonderful. . . . We know of no handbook of English history so complete and at the same time so readable as this work of Mr. Sanderson's."—*The Outlook, N. Y.*

"Well indexed, divided, and arranged."—*The Churchman, N. Y.*

Quoted in Congress and by Writers as Authority.

A Short Tariff History of the United States, from 1783 to 1789, by DAVID H. MASON, formerly Tariff Editor of the (Chicago) *Inter Ocean.* 1 vol., 12mo, cloth, with copious index. Price, $1.00.

A point-blank refutation of the claim in the National Democratic Platform of 1892 that "the Federal Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only."

This book brings out prominently these historical facts:

FIRST. That the American people tried almost absolute Free Trade for six years, or from 1783 to 1789, and that its extremely disastrous operation brought the Confederation of that period to the verge of anarchy.

SECOND. That, in consequence of that bitter experience, the Federal Union was formed, under the present Constitution, principally to enable Congress to protect home industry, by duties on imports and by navigation laws.

THIRD. That the Federal Convention, in framing the Constitution, granted to Congress both the Revenue Power and the Protecting Power, and that the purpose of revenue was alien to the latter; so much so, indeed, that "a tariff for revenue only" would be a defeat of the meaning and intent of that power.

DAVID H. MASON, Publisher,
460 W. Randolph St., Chicago, Ill.

The Organization of Charities.

Edited, with an introductory paper, by President D. C. GILMAN. 400 pages, octavo, cloth, $1.50.

Hospitals, Dispensaries, and Nursing.

Edited by Dr. JOHN S. BILLINGS and Dr. HENRY M. HURD. 734 pages, octavo, with 60 illustrations, cloth, $5.00.

These volumes, the first two of the series containing the papers presented at the International Congress of Charities, Correction, and Philanthropy at Chicago, are now ready and will be sent, postage paid, at above-named prices. The subscription to the series of five volumes is $7.50. A prospectus will be sent on application.

D. Appleton & Co.'s New Books.

A Policy of Free Exchange.

Essays by Various Writers, on the Economical and Social Aspects of Free Exchange and Kindred Subjects. Edited by THOMAS MACKAY, editor of "A Plea for Liberty." 8vo. Cloth, $4.00.

Vital economic questions of the day are treated in this volume by recognized authorities. Among the chapters of this important work are "The Coming Industrial Struggle," by William Maitland; "National Workshops," by St. Loe Strachey; "The State in Relation to Railways," by W. M. Acworth; "The Principle of Progression in Taxation," by Bernard Mallet; and "The Law of Trade Combinations," by the Hon. Alfred Lyttelton.

Edward L. Youmans,

Interpreter of Science for the People. A Sketch of his Life, with Selections from his Published Writings, and Extracts from his Correspondence with Spencer, Huxley, Tyndall, and others. By JOHN FISKE. With 2 Portraits. 12mo. Cloth, $2.00.

The late Dr. Youmans's services to popular education in science, as a lecturer and writer, as the founder of The Popular Science Monthly, the originator of the International Scientific Series, and the introducer of Spencer, Tyndall, Huxley, and others to an American audience, have been so singularly rich and productive, that the history of his life is in large measure the history of popular science in America during his lifetime. It is especially fortunate that his life work is described by so competent, eloquent, and appreciative a biographer.

Aphorisms from the Writings of Herbert Spencer.

Selected and arranged by JULIA RAYMOND GINGELL. With Portrait. 12mo. Cloth, $1.00.

". . . All the aphorisms have been selected from the latest editions of the works, and I have tried to make them illustrate, as fully as possible, the wide range taken by this unique philosophy, which not only soars to the sublimest heights, but takes note of the apparently most trivial matters, showing that nothing is too insignificant to form a more or less important factor in the great work of evolution."—*From the Preface.*

Natural Resources of the United States.

By JACOB HARRIS PATTON, A.M., Ph.D., author of "Four Hundred Years of American History," "Political Parties in the United States," etc. Revised, with additions. 8vo. Cloth, gilt top, $3.00.

"A valuable summary of our native wealth. It treats not only of the precious metals, coal, iron, and petroleum, but of natural gas, building stones, fire clay, kaolin, abrasive materials, mineral springs, salt deposits, grasses, orchard fruits, deposits of gypsum, marl and phosphate, wild game, and fur-bearing animals. There are chapters on irrigation, health resorts, resources in water power and in lands. The section on our fisheries is deeply interesting, and contributes fresh scenes to the general panorama of our national prosperity. . . . No reader of this work can consistently despair of the future of the great republic."—*Philadelphia Ledger.*

A History of the United States Navy.

From 1775 to 1894. By EDGAR STANTON MACLAY, A.M. With Technical Revision by Lieut. ROY C. SMITH, U.S.N. In two volumes. Vol. I. With numerous Maps, Diagrams, and Illustrations. 8vo. Cloth. Price, $3.50 per volume.

"The author writes as one who has digged deep before he began to write at all. He thus appears as a master of his material. This book inspires immediate confidence as well as interest."—*N. Y. Times.*

"A most conscientious narrative, from which wise statesmen may learn much for their guidance, and it certainly is one of absorbing interest."—*N. Y. Commercial Advertiser.*

"Mr. Maclay is specially qualified for the work he has undertaken. Nine years has he devoted to the task. The result of his labors possesses not only readableness but authority. . . . Mr. Maclay's story may be truthfully characterized as a thrilling romance, which will interest every mind that is fed by tales of heroism, and will be read with patriotic pride by every true American."—*Chicago Evening Post.*

Memories of My Exile.

By LOUIS KOSSUTH. Translated fram the original Hungarian by FERENCZ JANSZ. 12mo. Cloth, $2.00.

The present widespread interest in the life of the great Hungarian patriot has created a renewed demand for this volume, published some years ago, and a new edition is now ready.

New Edition of Professor Huxley's Essays.

Collected Essays.

By THOMAS H. HUXLEY. New complete edition, with revisions, the Essays being grouped according to general subject. In nine volumes, a new Introduction accompanying each volume. 12mo. Cloth, $1.25 per volume.

The volumes already issued are as follows:

Vol. I. **Method and Results.**
Vol. II. **Darwiniana.**
Vol III. **Science and Education.**
Vol. IV. **Science and Hebrew Tradition.**
Vol. V. **Science and Christian Tradition.**

Ready shortly:

Vol. VI. **Hume.**
Vol. VII. **Ethical and Philosophical Essays.**
Vol. VIII. **Man's Place in Nature.**
Vol. IX. **Essays in Science.**

"Mr. Huxley has covered a vast variety of topics during the last quarter of a century. In gives one an agreeable surprise to look over the tables of contents and note the immense territory which he has explored. To read these books carefully and studiously is to become thoroughly acquainted with the most advanced thought on a large number of topics."—*New York Herald.*

"The series will be a welcome one. There are few writings on the more abstruse problems of science more adapted to reading by the general public, and in this form the books will be well in the reach of the investigator. . . . The revisions are the last expected to be made by the author, and his introductions are none of earlier date than a few months ago [1893], so they may be considered his final and most authoritative utterances."—*Chicago Times.*

A History of Germany.

From the Earliest Times to the Present Day. By BAYARD TAYLOR. With an Additional Chapter by MARIE HANSEN-TAYLOR. With Portrait and Maps. 12mo. Cloth, $1.50.

"An ambitious and comprehensive work, and the new guise makes it more attractive than ever. . . . Bayard Taylor's sparkling, wide-awake, and yet poetic manner brings events and their issues before the reader forcibly, and with a potency which will last in the memory."—*Chicago Herald.*

"Taylor's long connection with and admiration for the Germans, added to his extensive labors among their literature, made him of all men most fitted for the writing of such a work, and his excellent wife, herself a German, and a fine scholar in her native lore, has rendered the world a service in thus bringing a fine work to meet the demands of the time."—*Chicago Interior.*

A Costly Freak.

By MAXWELL GRAY, author of "The Silence of Dean Maitland," "An Innocent Impostor," etc. No. 137, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

This story demonstrates that the author's power to hold her readers' closest attention has not diminished since the appearance of "The Silence of Dean Maitland." It is a novel which compares more nearly to that remarkable book than does any other of her writings.

A Beginner.

By RHODA BROUGHTON, author of "Goodbye, Sweetheart!" "Nancy," etc. No. 138, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

The long-standing popularity of Rhoda Broughton's former books is sufficient introduction for the present volume, which is pronounced one of her best.

A Yellow Aster.

By IOTA. No. 139, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"The warmest of welcomes is due from the reading public."—*London Athenæum.*

"We shall be surprised if it does not rank among the novels of the year."—*Westminster Gazette.*

"A Saul has risen among the fictional prophets. 'A Yellow Aster' is distinctly a work of genius, remarkable for novelty of plot, force of diction, grace of literary style, and subtlety of psychical analysis."—*London Telegraph.*

The Rubicon.

By E. F. BENSON, author of "Dodo." No. 140, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

An eminent English critic has said of this new novel: "I think 'The Rubicon' a more interesting society story than any that has been published in England for many years. . . . It is a tale of London fashionable life of to-day, . . . introducing a novel situation which is extremely cleverly managed so as to form a singular satire on our artificial modes of life and springs of action. Towards the close of the book Dodo is introduced in a very effective manner, for a few pages; and her choice in life is cleverly contrasted with that of the new heroine."

For sale by all booksellers, or will be sent by mail on receipt of price by the Publishers,

D. APPLETON & CO., 1, 3, and 5 Bond Street, New York.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE, 150 5th Ave., cor. 20th St., N. Y.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and *That* is something, but if tells you about them it is asked to recommend a teacher and recommends you, that is more. Ours *Recommends* C. W. BARDEEN, Syracuse, N. Y.

THE ENGLISHMAN AT HOME:

His Responsibilities and Privileges.

By EDWARD PORRITT, formerly London Editor of the Manchester *Examiner*.

The author's aim has been to make the book not only of use and interest to students of civics and of English history and contemporary politics, but also of value to American visitors to England and to readers of English news in the American press. His accuracy and carefulness of statement may be subjected to the most critical test. The style is good and entertaining. The book cannot fail to be a welcome addition to every library. One volume. Cloth, 12mo, xiv+379 pp. Appendices, Index. $1.75.

"No adequate book has been easily procurable which briefly and simply has told how the Englishman is governed and what are his responsibilities and privileges. Mr. Porritt has endeavored to supply this sort of book, and has succeeded admirably. He has told about everything an American needs to know, and has told it according to a method which leaves hardly anything to be desired."—*New York Times*.

"A valuable book, and one that ought to be read by all who seek to be well informed."—*Chicago Times*.

"A highly welcome volume."—*Philadelphia Press*.

"Of rare interest and great value."—*Boston Advertiser*.

"A better account of the working institutions of England than is elsewhere accessible to American readers."—*Boston Herald*.

"A very useful and instructive book."—*The Beacon*.

Easy Stories and Exercises in German.

By A. A. DAVID, B.A., Assistant Master at Bradfield College. Crown 8vo. 35 cents.

Longmans' German Grammar.

By J. ULRICH RANSOM, B.A. With English-German and German-English Vocabularies. 12mo. 262 pages. 90 cents.

This series of German Lessons has been drawn up with special reference to the English-speaking pupil's difficulties. The Declensions are dealt with on a new plan, thereby reducing their difficulty, and very great care has been used in the selection of the vocabularies, and in an attempt to graduate the exercises in point of difficulty. Wherever possible a *viva voce* exercise embodying any new principle is given before proceeding to the more difficult exercise. Grammar is taught systematically, but all matter of secondary importance to beginners is put in an appendix.

*** The work can also be had in two parts. Part I., Up to and including the Regular Verb, 50 cents. Part II., Including the Irregular Verbs, Syntax, Derivation, etc., 50 cents.

Longmans' German Composition.

Containing 100 selections of Prose and Verse for translation into German, taken chiefly from University Examination Papers, with Notes, and a Comprehensive Vocabulary. By J. ULRICH RANSOM, B.A. 12mo. 90 cents.

Our Classified Catalogue of School Books, covering works in all branches of Education, sent to any address, upon request.

PROFESSORS AND TEACHERS

to the following books in the departments of

ANCIENT LANGUAGES AND HISTORY.

LATIN LESSONS. Designed to Prepare for the Intelligent Reading of Classic Latin. By HENRY PRERLE, formerly Assistant Professor of Latin and Greek at Harvard University, and L. C. HULL, Master in the Lawrenceville School, Lawrenceville, N. J. $1.12, *net.*

"We have used Preble and Hull's Latin Lessons since last September, and are very much pleased with the book. Its method and arrangement are excellent, and certainly help the pupil to get into the spirit of the language. Although it requires hard work it is the best possible preparation for the reading of classical Latin."—*George W. Cook, Principal of Brighton Heights Seminary, New Brighton, Staten Island, N. Y.*

ANDREWS & STODDARD'S LATIN GRAMMAR. A NEW EDITION, thoroughly revised by HENRY PREBLE. $1.12 net.

"I am so pleased with Andrews & Stoddard's in its new form, that I am free to say it is, in my judgment, a decided step in advance. . . . Its pronunciation, its remarks on euphony and word-formation, are succinct and close up to the latest advances made. Its shortening up of declensions pleased me, and the marshalling of five verbs side by side through their entire conjugation. I cannot say enough of the syntax, and especially of the way the Indirect Discourse is put."—BENJAMIN GILL, *formerly Professor of Greek, Wesleyan Academy, Wilbraham, Mass.*

Descriptive circulars of these two books, with sample pages and commendations from prominent teachers, will be sent to any address on application.

TRANSLATIONS.

THE ODYSSEY OF HOMER. Translated into English Prose. By Prof. G. H. PALMER. Complete Edition, $1.50. *Students' Edition*, $1.00.

WILLIAM CULLEN BRYANT'S TRANSLATION OF THE ODYSSEY OF HOMER. *Roslyn Edition*, $2.50.

WILLIAM CULLEN BRYANT'S TRANSLATION OF THE ILIAD OF HOMER. *Roslyn Edition*, $2.50.

GREEK POETS IN ENGLISH VERSE. By Various Translators. Edited, with an introduction, by W. H. APPLETON, Professor of Greek in Swarthmore College, $1.50.

HORATIAN ECHOES. Translations of the Odes of Horace. By JOHN O. SARGENT. With introduction by Oliver Wendell Holmes, and biographical sketch, $1.50.

THE ÆNEID. Translated into English Blank Verse by C. P. CRANCH. New Edition. $2.50.

THE GROWTH AND INFLUENCE OF CLASSICAL GREEK POETRY. By RICHARD CLAVERHOUSE JEBB. $1.50.

"Prof. Jebb so well combines all the powers requisite for the interpretation of Greek literature to the modern mind, that Johns Hopkins University was fortunate last year in securing from him this series of eight lectures. Their aim is to exhibit concisely but clearly the leading characteristics of the best classical Greek poets, and to illustrate the place of ancient Greece in the general history of poetry."—*Literary World, Boston.*

BOOKS ON HISTORY.

EPITOME OF ANCIENT, MEDIÆVAL, AND MODERN HISTORY. By CARL PLOETZ. Translated from the German, with additions, by W. H. TILLINGHAST. With full Index. $3.00.

This work is not intended for an ordinary text-book, to be committed to memory or to be used for recitations, but it will be found exceedingly useful as a guide for students wherever history is taught by lectures, or by any other method than by memoriter recitations. By reason of its comprehensive character and its full Index this work is practically so valuable and convenient that it should find a place in every public library, in every school and college library, and indeed, in every private library—wherever books are read or consulted.

A HISTORICAL VIEW OF THE AMERICAN Revolution. By GEORGE WASHINGTON GREENE $1.50.

A HISTORY OF THE UNITED STATES FOR SCHOOLS. By JOHN FISKE. With Maps, Portraits, and other Illustrations; also with Questions on the text by F. A. Hill, Secretary of the Massachusetts State Board of Education. (*In press for early publication.*)

The publishers will be happy to correspond with teachers in regard to any of the books mentioned above and also in regard to the many other of their books suitable for use in schools and universities.

HOUGHTON, MIFFLIN & CO.,

4 Park Street, Boston.
11 East 17th Street, New York.
28 Lakeside Building, Chicago.

EIGHT GREAT DICTIONARIES

FOR SCHOOLS AND PRIVATE LEARNERS.

Liddell and Scott's Greek Lexicon.

Revised and Enlarged. A Greek-English Lexicon. Compiled by HENRY GEORGE LIDDELL, D.D., and ROBERT SCOTT, D.D. With Co-operation of HENRY DRISLER, Jay Professor of Greek in Columbia College, New York. pp. xiv., 1776. Seventh Edition, Revised and Augmented throughout. 4to, Sheep, $10 00.

Liddell and Scott's Intermediate Greek Lexicon.

An Intermediate Greek-English Lexicon, founded upon the Seventh Edition of Liddell and Scott's Greek-English Lexicon. pp. iv., 910. Small 4to, Cloth, $3 50; Linen, $3 75; Sheep, $4 00.

"I have seen so much evil from the use of the little abridged lexicon by college students, and have had so much difficulty in persuading all to use the large lexicon, that I shall be glad to exert my influence in favor of the 'Intermediate Greek Lexicon' for ordinary college students."—T. D. SEYMOUR, *Professor of Greek, Yale College.*

Liddell and Scott's Greek Lexicon. Abridged.

A Lexicon Abridged from Liddell & Scott's Greek-English Lexicon. The *Twentieth Edition*, carefully Revised throughout. With an Appendix of Proper and Geographical Names, prepared by the Rev. JAMES M. WHITON, Ph.D. pp. 832. Small 4to, half leather, $1 25.

Harper's Latin Dictionary.

Founded on the translation of "Freund's Latin-German Lexicon." Edited by E. A. ANDREWS, LL.D. Revised, Enlarged, and in great part Rewritten, by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D. pp. xiv., 2020. Royal 8vo, Sheep, $6 50; Full Russia, $10 00.

Lewis's Latin Dictionary.

A Latin Dictionary for Schools. By CHARLTON T. LEWIS, Ph.D. pp. 1192. Large 8vo, Cloth, $5 50; Sheep, $6 00.

"This dictionary is not an abridgment, but an entirely new and independent work, designed to explain every word or phrase in the Latin literature commonly read in schools, viz., the complete works of Cæsar, Terence, Cicero, Livy, Nepos, Virgil, Horace, Ovid, Juvenal, Phædrus, and Curtius, the Catiline and Jugurtha of Sallust, the Germania and Agricola of Tacitus, and a few words found in some extracts of Florus, Eutropius, and Justinus. The original meaning of every word is first given, and then the modifications which it underwent in usage."—*From Preface.*

Lewis's Elementary Latin Dictionary.

An Elementary Latin Dictionary. By CHARLTON T. LEWIS, Ph.D. pp. 952. Small 4to, half leather, $2 00.

"I have put it to the test of constant use over the range of authors now read by my classes, Cicero, Horace, Tacitus, Plautus, Terence, and Juvenal, and have found it ample. The definitions are clear, and the interpretation of passages often very happy."—J. HOWARD STOUGH, *Professor of Latin, Midland College.*

Thayer's Greek-English Lexicon.

Greek-English Lexicon of the New Testament; being Grimm's Wilke's Clavis Novi Testamenti, Translated, Revised, and Enlarged by JOSEPH HENRY THAYER, D.D., Bussey Professor of New Testament Criticism and Interpretation in the Divinity School of Harvard University. pp. 746. 4to, Cloth, $5 00; Half Roan, $6 00; Sheep, $6 50.

"Altogether the volume is one of great value, and the eminent scholars who have been concerned in its production should have the thanks of all who love the study of the New Testament in the Greek tongue."—*Presbyterian, Philadelphia.*

Yonge's English-Greek Lexicon.

An English-Greek Lexicon. By C. D. YONGE. With Many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonymes. To which is prefixed an Essay on the Order of Words in Attic-Greek Prose, by CHARLES SHORT, LL.D. Edited by HENRY DRISLER, LL.D. pp. 894. Royal 8vo, Sheep, $4 50.

"This work is not a mere collection of Greek words which may be equivalents of certain English words, thrown carelessly together without system, but a carefully arranged lexicon, in which a scholar can see the *nature* of the word he is employing, whether it is poetic or specially Homeric, or philosophic, or peculiar to comedy, or colloquial. The work is certainly a great accession to our apparatus of classical instruction."—W. W. GOODWIN, Ph.D., *Eliot Professor of Greek Literature in Harvard College.*

☞ *The above books may be had of all booksellers, or will be sent by the publishers, on receipt of price. If ordered sent by mail 10 per cent. should be added to the price to pay postage.*

HARPER & BROTHERS, Publishers, Franklin Square, New York.

GINN & COMPANY PUBLISH:

Concordance of the Divina Commedia.

By EDWARD ALLEN FAY, Ph.D. Large 8vo. vi+819 pages. Price, by mail, carriage paid, $10.00.

This book is a complete concordance of the Divine Comedy, giving every word with the connection in which it stands. It is based upon the text of Witte (Berlin, 1862), with the addition of such words of the edition of Niccolini, Capponi, Borghi, and Becchi (Florence, 1867) as differs from Witte's. Words peculiar to Dante, and forms used by him only in the rhyme are specially designated.

Mechanism and Personality.

By FRANCIS A. SHOUP, D.D., Professor of Analytical Physics, University of the South. 12mo. Cloth. xvi+341 pages. Price, $1.30.

This book is an outline of Philosophy in the light of the latest scientific research. It deals candidly and simply with the "burning questions" of the day, the object being to help the general reader and students of Philosophy find their way to something like definite standing-ground among the uncertainties of science and metaphysics.

GEO. TRUMBULL LADD, *Professor of Philosophy, Yale University:* "I find it an interesting and stimulating little book. Written, as it is, by one whose points of view are somewhat outside of those taken by professional students of philosophy, it is the fresher and more suggestive on that account."

Animal Life and Intelligence.

By C. LLOYD MORGAN, F.G.S., Professor in and Dean of University College, Bristol, England, author of "Animal Biology," etc. 8vo, Cloth, xvi+512 pages. Illustrated. Retail price, $4.

Professor C. O. WHITMAN *of Chicago University, Editor of the Journal of Morphology:* "Dr. Morgan's 'Animal Life and Intelligence' is one of the very few really excellent philosophical treatises on this subject. The work is characterized throughout with a candor, originality, and vigor of thought that are truly refreshing and stimulating. It is sure to be heartily welcomed by all biological students, and by general readers as well."

The Philosophical Review.

Edited by J. G. SCHURMAN, Dean of the Sage School of Philosophy in Cornell University, and Prof. J. E. CREIGHTON of Cornell University. Crown 8vo. About 128 pages in each number. Annual subscription (six numbers), $3.00; single number, 75 cents.

Political Science Quarterly.

Edited by the University Faculty of Political Science of Columbia College.

CONTENTS FOR MARCH:

Ideas on Constitutional Revision, John B. Uhle. *The Banks and the Panic of* 1893, A. D. Noyes *Austin's Theory of Sovereignty*, Prof. John Dewey. *Positive Law and Other Laws*, Charles M. Ginn & Co., Publishers, Boston, New York, Chicago, London

NO THOUGHTFUL READER'S LIBRARY

Can be considered complete unless it contains these remarkably brilliant, scholarly, and popular works on important and interesting subjects by

FRANCIS W. UPHAM, LL.D.

The Wise Men:

Who They Were and How They Came to Jerusalem.

"On the question as to the Magi, Dr. Upham has bestowed an examination at once scholarly and thorough, has removed all difficulty, and has invested the whole subject with singular interest. The volume has our earnest commendation."—*British Quarterly Review.*

12mo. Cloth, 80 Cents.

The Star of Our Lord.

With Thoughts on Inspiration and the Astronomic Doubt as to Christianity.

"This book abounds in sublimities and beauties. 'The Astronomic Doubt as to Christianity' is a treatise of great value, and the exposition of the Eighth Psalm is a specimen of the highest style of exegesis. Dr. Upham's thoughts on the death of the children at Bethlehem and his argument thence to THE SALVATION OF ALL INFANTS ARE NOVEL AND CONCLUSIVE. But we cannot emphasize one part above another. It is a rich and precious contribution to the literature of a true Christianity."—HOWARD CROSBY, D.D., LL.D., *late Chancellor of the University of the City of New York.*

12mo. Cloth, $1.00.

Thoughts on the Holy Gospels:

How They Came to be in Manner and Form as They Are.

CYRUS HAMLIN, D.D., LL.D., thirty years Missionary in the Ottoman Empire and first President of Robert College, Constantinople, says: "It is better than any commentary or any of the 'Introductions' I have read. Modern writers breathe another life than that of the East. They do not comprehend it. They do not enter into it. I think no one has achieved this to the degree which Dr. Upham has. To all who will give time to the book it will be rich in blessing, and they will read the Gospels with renewed interest, with increase of faith and joy."

12mo. Cloth, $1.00.

St. Matthew's Witness to the Words and Works of the Lord.

"This book is not based on the opinions of others. It shows complete mastery of details, and the author is irresistible in showing that the Gospel was written according to a preconceived plan."—DR. MENDENHALL, *the late Editor of the Methodist Review.*

12mo. Cloth, $1.20.

OTIS O. HOWARD, Major-General U. S. Army, says: "I have gained so much positive truth from these books that the Gospels are a new revelation to me. They solve many problems heretofore unsolved. These facts have made me earnestly bent on making them better known."

PUBLISHED BY

HUNT & EATON, 150 Fifth Avenue, New York.

EDUCATIONAL PUBLICATIONS OF CHARLES SCRIBNER'S SONS.

TEXT-BOOKS BY LEADING AUTHORITIES RECENTLY ISSUED.

PSYCHOLOGY, DESCRIPTIVE AND EXPLANATORY. A Treatise of the Phenomena and Development of Human Mental Life. By GEORGE T. LADD. Price, $4 50.

"I shall take pleasure in recommending Professor Ladd's new book on Psychology to my classes as a most thorough and exhaustive treatment of the subject."—Prof. JAMES H. HYSLOP of Columbia.

"I shall at once recommend its use by my classes."—J. W. STEARNS, University of Wisconsin.

LOGIC, INDUCTIVE AND DEDUCTIVE. By WILLIAM MINTO. Price, $1.25 *net.*
Introduced in *Yale University, Brown Univers ty, University of Vermont.*

THEOLOGICAL PROPÆDEUTIC. An Introduction to the Study of Theology. By PHILIP SCHAFF. Price, $3.00 *net.*
This is the first text-book on this subject to appear in America.

THE REALM OF NATURE. By HUGH R. MILL. Price, $1.50 *net.*
A description of the structure of the Universe, the form, material, and processes of the Earth, and the relations which they bear to Life in its varied phases.

"An excellent book, clear, comprehensive, and remarkably accurate."—Prof. W. N. DAVIS, of Harvard.

OUTLINES OF ENGLISH LITERATURE. By WILLIAM RENTON. Price, $1.00 *net.*
Introduced in the *Massachusetts Institute of Technology, Emerson School of Oratory,* and *Boston University.*

ARISTOTLE, AND THE ANCIENT EDUCATIONAL IDEALS. By THOMAS DAVIDSON, M.A., LL.D. 12mo, $1.00 *net.* "The Great Educators."
"I know nothing in English that covers the field of Greek education so well. You will find it very hard to maintain this level in the later works of the series, but I can wish you nothing better than that you may do so."—G. STANLEY HALL, Clark University.

THE STUDY OF ANIMAL LIFE. By T. ARTHUR THOMSON, School of Medicine, Edinburgh. With illustrations. $1.50 *net.*
"As a well balanced introduction to the study of animal life in all its phases it is the best single book I know of."—Prof. J. G. NEEDHAM, Johns Hopkins.

CIVILIZATION DURING THE MIDDLE AGES, ESPECIALLY IN ITS RELATION TO MODERN CIVILIZATION. By GEORGE B. ADAMS. Price, $2.50.
"This volume we are confident will be found one of the notable books of the year just begun. It is one based, we may say, on a sound philosophy, and gives to the middle ages the credit which has so often been denied them, for the boasted civilization and institutions of modern times."—BOSTON DAILY ADVERTISER.

ELEMENTS OF ETHICS. By J. H. MUIRHEAD. Price, $1.00 *net.*
Introduced in *Brown University, Bowdoin College, Smith College, University of Pennsylvania, etc.*

THE PHILOSOPHY OF THE BEAUTIFUL: ITS THEORY AND ITS RELATION TO THE ARTS. By WILLIAM KNIGHT. Price, $1.00 *net.*

THE PHILOSOPHY OF THE BEAUTIFUL: ITS HISTORY. By WILLIAM KNIGHT. Price $1.00 *net*

THE FINE ARTS. By G. BALDWIN BROWN, Professor of Fine Arts in the University of Edinburgh. 12mo, $1.00 *net*
The whole field of the "Fine Arts" of painting, sculpture, and architecture, their philosophy, function, and historic accomplishment, is covered in this compact but exhaustive manual.

MANUAL OF MYTHOLOGY. For the Use of Schools, Art Students, and General Readers, Founded on the Works of Petiscus, Preller, and Welcker. By ALEXANDER S. MURRAY, Department of Greek and Roman Antiquities, British Museum. With 45 plates on tinted paper, representing more than 90 Mythological Subjects. Reprinted from the second revised London edition. Crown 8vo, $1.75.

THE COLONIAL ERA. (American History Series.) By GEORGE P. FISHER. Price, $1.25.
"A marvel of literary success. So small a compass yet attractive and readable.'—Prof. JAMES MONROE, Oberlin.
"The best of what we know concerning the age."—Ex-Pres. C. K. ADAMS, Cornell University.

THE FRENCH WAR AND THE REVOLUTION. (American History Series.) By WILLIAM M. SLOANE. Price, $1.25.

Any book mentioned above will be sent, postpaid, upon receipt of price. Write for Special Examination Terms.

Descriptive Catalogue of Educational Publications sent free. Privileges of Examination, Introductory Prices, Regular Rates to Instructors, to Libraries, and to the Trade will be cheerfully furnished upon application.

CONTEMPORARY PUB. CO., 5 Beekman St., N. Y.

Quoted in Congress and by Writers as Authority.

A Short Tariff History of the United States, from 1783 to 1789, by DAVID H. MASON, formerly Tariff Editor of the (Chicago) *Inter Ocean.* 1 vol., 12mo, cloth, with copious index. Price, $1.00.

A point-blank refutation of the claim in the National Democratic Platform of 1892 that "the Federal Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only."

This book brings out prominently these historical facts:

FIRST. That the American people tried almost absolute Free Trade for six years, or from 1783 to 1789, and that its extremely disastrous operation brought the Confederation of that period to the verge of anarchy.

SECOND. That, in consequence of that bitter experience, the Federal Union was formed, under the present Constitution, principally to enable Congress to protect home industry, by duties on imports and by navigation laws.

THIRD. That the Federal Convention, in framing the Constitution, granted to Congress both the Revenue Power and the Protecting Power, and that the purpose of revenue was alien to the latter; so much so, indeed, that "a tariff for revenue only" would be a defeat of the meaning and intent of that power.

DAVID H. MASON, Publisher,
460 W. Randolph St., Chicago, Ill.

A NEW HISTORY.
A History of the United States
For Schools, Academies, and the General Reader. By ALLEN C. THOMAS, Prof. of History, Haverford College.

The aim of this work is to give the main facts of the History of the United States in a clear and simple style. The book is essentially a history of the country under the Constitution, only about one-third of the book being given to colonial times.

532 pages. Maps and Illustrations. Half leather, $1.25.

D. C. HEATH & CO., Publishers,
Boston, New York, Chicago.

OUR NEW BOOKS

TOTAL ECLIPSES OF THE SUN.

By MABEL LOOMIS TODD. (No. 1, Columbian Knowledge Series. Edited by Prof. DAVID P. TODD of Amherst College.) With numerous illustrations. 16mo. Cloth. Gilt. $1.00.

The great eclipse of 1842 marked the dawn of a golden age of physical research upon the Sun, and the conclusion of a half century of significant research forms a fitting epoch for summarizing salient results in review. The present volume is not written for astronomers, much less for eclipse experts, but to give very unprofessional information to those without technical knowledge who are yet curious as to these strangely impressive phenomena—and with the hope, too, of creating further intelligent interest.

BY MOORLAND AND SEA.

By FRANCIS A. KNIGHT, author of "By Leafy Ways," "Idylls of the Field," etc. Illustrated by the author. 12mo. Cloth. $1.50.

"There is a vein of genuine poetry in Mr. Knight, and in his wanderings 'By Moorland and Sea' it finds graceful expression. These fifteen descriptive essays are filled with close but never paraded observation of Nature in sunshine and storm, and each little delicate picture is firmly drawn, and has in it just the requisite amount of local color. The breath of the country is in these sketches, and that fact in part explains their spell, and the rest of the secret stands revealed in the brilliant descriptive gift of the writer."—*The Speaker.*

ART FOR AMERICA.

By WILLIAM ORDWAY PARTRIDGE. 16mo. Cloth. $1.00.

A strong plea for the elevation of American Art to its rightful place in the scheme of general education.

ABOUT A CATALOGUE.

Our business is buying and selling Old Books, ranging in size from a single book to large and famous libraries. Throughout the year we are offered job-lots and remainders of new and fast-selling books, but buy only those we can sell far below the publisher's price. We have just issued a Clearance Catalogue of such Books, including an illustrated history and description of our store. When sending for it mention *Nation*. No return stamp required.

Leary's Old Book Store,

NEW PUBLICATIONS.

PAN MICHAEL. *Completing the very successful series of Historical Romances by Henryk Sienkiewicz.*

PAN MICHAEL. An Historical Novel of Poland, the Ukraine, and Turkey. A Sequel to "With Fire and Sword" and "The Deluge." Translated from the Polish of HENRYK SIENKIEWICZ by Jeremiah Curtin. Crown 8vo, cloth, $2.00.

BOSTON ADVERTISER: *A great novel. It abounds in creations. It is a fitting ending to a great trilogy—a trilogy which teaches great lessons.*

WITH FIRE AND SWORD. One vol., crown 8vo, cloth, $2.00.

THE DELUGE. Two vols., crown 8vo, cloth, $3.00.

The complete series, Library Edition—With Fire and Sword, 2 vols., The Deluge, 2 vols., and Pan Michael, 1 vol. In all 5 vols., crown 8vo, cloth, gilt top, $8.00; half calf, gilt top, $18.00.

By the Same Author.

WITHOUT DOGMA. A Novel of Modern Poland. Translated from the Polish of HENRYK SIENKIEWICZ by Iza Young. Crown 8vo, cloth, $1.50.

YANKO, THE MUSICIAN, AND OTHER STORIES. Translated from the Polish of HENRYK SIENKIEWICZ by Jeremiah Curtin. Illustrated by Edmund H. Garrett. 16mo, white and gold, $1.25.

IN A NORTH COUNTRY VILLAGE. By M. E. FRANCIS, author of "Whithes." 12mo, cloth, $1.25.

ATHENÆUM: *The whole book is so good that it ought to be read from cover to cover.*

PALL MALL GAZETTE: *A book for laughter and for tears, a book worthy to stand side by side with Cranford.*

ELEMENTS OF SCIENCE. By ST. GEORGE MIVART. Crown 8vo, cloth, $2.00.

BIG GAME SHOOTING (New Volume in Badminton Library). By CLIVE PHILLIPS-WOLLEY, with contributions by Sir Samuel W. Baker, Warburton Pike, and others. Illustrated with numerous full-page plates by Charles Whymper, etc. 2 vols., crown 8vo, cloth, $7.00; half morocco, $10.00.

Little, Brown & Co., Publishers,

254 Washington Street, Boston.

William Lloyd Garrison,

1805–1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (till recently published by the Century Company), has been reduced in price from $12.00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression: it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

*** *For sale by booksellers. Sent, postpaid, on receipt of price by the Publishers,*

HOUGHTON, MIFFLIN & CO.,

BOSTON AND NEW YORK.

Warne's Library of Natural History.

Published Monthly. Price 50 Cents.

MESSRS. FREDERICK WARNE & COMPANY take pleasure in announcing that about May 1 they will commence the issue of a new monthly serial under the above title, the first instalments of which will compose

The Royal Natural History.

Edited by Mr. RICHARD LYDEKKER, B.A., F.G.S., F.Z.S., joint author of "An Introduction to the Study of Mammals," etc. The Preface by P. L. Sclater, M.A., Ph.D., F.R.S., Secretary of the Zoölogical Society of London.

This work is entirely new, and will include the four orders of creation; thoroughly abreast of the age, full, accurate, and readable, and abounding in anecdote. Its arrangement is such that, when bound, the various orders can be readily consulted, and its PICTORIAL ELEMENT will place it at once in the first rank of works of this nature—some 1,600 engravings, many full-page, as well as 72 full-page colored illustrations, will be comprised in the work when finished.

This portion of the Library will occupy 36 monthly numbers, and will be published at 50 cents a month. Subscriptions, payable in advance, $5.50 per annum, or the 36 numbers for $15.00, mail free.

Natural History interests young and old, and it has never before been presented in such a beautiful form, pictorially and typographically. Ask your bookseller to show you the first number, or remit us fifty cents and we will send it to you free by mail, with a full prospectus.

Subscriptions Received by all Booksellers.

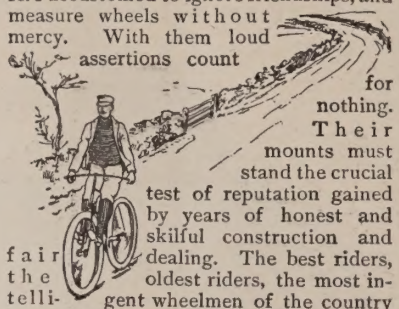
Old Riders who know Bicycles



Are accustomed to ignore friendships, and measure wheels without mercy. With them loud assertions count for nothing. Their mounts must stand the crucial test of reputation gained by years of honest and skilful construction and dealing. The best riders, the oldest riders, the most intelligent wheelmen of the country know Columbias to be the standard of bicycle excellence for the world, and ride them in preference to any other wheels.

POPE MFG. CO., Boston, New York, Chicago, Hartford.

Our catalogue for 1894 shows a line of wheels, all newly designed, which for attractiveness excel any bicycles ever offered. It is free at our agencies, or we mail it for two two-cent stamps.

THE LENOX LIBRARY

DAY, BOARDING, and COLLEGE PREPARATORY SCHOOL FOR GIRLS reopens Sept. 26, 1894. Address Miss FLORENCE BALDWIN, BRYN MAWR, PA.

Teachers, etc.

A LADY HAVING HER OWN SCHOOL in New York has rented a country house in a desirable and healthful location, where she will receive a limited number of pupils, who will be under the chaperonage of herself and her teachers. A judicious amount of daily instruction will be combined with a happy outdoor life. Pupils who wish to prepare for school or college work can receive special courses. For particulars and references, address Miss GAYLER, 174 West 86th Street, New York.

EUROPE.—A LADY, TEACHING IN one of the Boston High Schools, is to take a year's leave of absence for travel and study in Europe and wishes to take charge of a young girl during the year. There are four ladies in the party. References, Rev. Edward Everett Hale, D.D., and Mr. Ellis Peterson, Board of Supervisors of Boston Public Schools. Address at once, A. B. C., care of the *Nation*.

EUROPE.—A YOUNG MAN (AGE 24), of high social standing, educated at Harvard, experienced in European travel, speaking German and French, wishes to take charge of a boy going abroad, or to go as companion to an invalid, for summer or longer. Highest references. Address S. P. C., P. O. Box 1124, Boston.

AN EXPERIENCED PROFESSOR of large Western school, a Parisian, who has always moved in best society, wishes to spend July and August in the East, either in a summer school or with refined family in which his teaching or lecturing can be utilized. References by students of Harvard and Smith Colleges. Address *Nation*, XX.

MADEMOISELLE M., TEACHER AT Aug. Fem. Seminary, Staunton, Va., desires to spend June, July, August, travelling or teaching. Exceptional training in French, German, and Piano offered. Experienced traveller (Russia, Poland). Would take small party to Europe.

A GERMAN GENTLEMAN OF GOOD social standing and thorough culture would like to teach and take care of children. Can give instructions in languages, mathematics, drawing, swimming, and fencing. C. W., care of the *Nation*.

A TEACHER OF HIGH STANDING in modern-language work in the East—good executive—present salary $2,000, would change for the same or more, in school or college. The very highest references. E. S., care *Nation*.

A SUMMER SCHOOL FOR LITTLE Girls will be opened at Cape May, N. J., the term beginning June 15. Early application should be made. For further particulars and circulars, address The Misses ARNOLD, 2030 Chestnut Street, Philadelphia, Pa.

A TEACHER, EXPERIENCED IN preparatory and college work in various subjects, a Ph D. in Mathematics, wishes to make a suitable engagement for the fall. Address C. M. E., care *Nation*.

AN EXPERIENCED GRADUATE OF the University of Virginia desires a position in some good high school or college. For references and testimonials, address C. N. D., care *Nation*.

A GERMAN SCHOLAR, AN AMERIcan and an experienced teacher, seeks an engagement. Address F. W., care of *Nation*.

ADIRONDACKS—INSTRUCTION in camp at Lake Placid by College Professor, after June 10. R. A., Teachers' College, N. Y.

FOR SALE.—THE PREMISES AND Furniture of a well-established Girls' School in Philadelphia. Address E. L., the *Nation*.

CHARLES W. STONE, *Tutor for Harvard*, 68 Chestnut Street, Boston.

Teachers, etc.

A HARVARD GRADUATE AND Ph.D., experienced tutor, having a practical knowledge of French and German from several years' residence in Europe, would like to take one or two boys abroad, giving instruction in college preparatory work. Address X., 858 Main St., Cambridge.

THE PRINCIPAL OF A PRIVATE school, experienced in preparatory work, and a specialist in English and Classics, desires an engagement for department work in a first-class school. R. T. S. care *Nation*.

AN EXPERIENCED LADY TEACHer of German and French—pure accent—speaking English fluently, wishes a position in school or college. Address F. D., *Nation*.

HARVARD GRADUATE WISHES TO tutor during summer months. Young pupil, 12–16, preferred. Address X. the *Nation*.

School Agencies.

AMERICAN AND FOREIGN TEACHers' Agency supplies Professors, Teachers, Tutors, Governesses, etc, to Colleges, Schools, and Families. Apply to Mrs. M. J. YOUNG-FULTON, 23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 4 Ashburton Place, Boston; 70 Fifth Avenue, N. Y.; 106 Wabash Ave., Chicago; 32 Church Street, Toronto; 131 Third Street, Portland, Or.; 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

THE NEW AMERICAN TEACHERS' AGENCY.—Teachers seeking positions and those wishing a change at an increased salary should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

THE ALBERT TEACHERS' AGENCY has filled over 1,300 positions, more than half within the last two years. High-class vacancies now for September. New handbook sent free. C. J. ALBERT, Manager, 211 Wabash Ave., Chicago, Ill.

AMERICAN AND FOREIGN *Professors*, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE, 150 5th Ave., cor. 20th St., N. Y.

NATIONAL BUREAU OF EDUCATION, Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest.

ADVICE about Schools, and Circulars free to parents. Best Teachers supplied for Colleges, Schools, and Families without charge. KERR & HUYSSOON, UNION SCHOOL BUREAU, 2 W. 14th St., N. Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

THE BRIDGE TEACHERS' AGENcies, 110 Tremont St., Boston, and 211 Wabash Ave., Chicago Agency Manual free to any address.

AMERICAN AND FOREIGN TEACHers' Bureau. Miss GRACE POWERS THOMAS, M'g'r, 3 Park St., Boston, Mass.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and tells *That* is something, but if you about them it is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*

RECENT TEXT-BOOKS.

BIOLOGY

INTRODUCTION TO ELEMENTARY PRACTICAL BIOLOGY. A Laboratory Guide for High-School and College Students. By CHARLES WRIGHT DODGE, M.S., Professor of Biology, Rochester University. pp. xiii., 422. Crown 8vo, cloth, $1.80. Introduction price, $1.50.

"I am very much pleased with the general plan, and think it the most helpful laboratory guide in Biology that has yet appeared. I shall certainly take occasion to try it in my classes."—H. M. CONN, *Professor of Biology, Wesleyan University, Middletown, Conn.*

"I think the plan of this work is admirable. It is designed to bring out the peculiar educational value of biological training, namely, the cultivation of direct observation, and Professor Dodge has succeeded in adhering to this plan, producing a work that is thoroughly accurate and will be of great value."—HENRY F. OSBORN, B.Sc., *Da Costa Professor of Biology, Columbia College, N. Y. City.*

LOGIC

THE ELEMENTS OF DEDUCTIVE LOGIC. By NOAH K. DAVIS, Professor of Moral Philosophy in the University of Virginia, and Author of "The Theory of Thought." pp. x., 208. Post 8vo, cloth, 90 cents. Introduction price, 75 cents.

"I have examined the Logic, and shall adopt it."—Prof. L. A. FOX, *Roanoke College, Virginia.*

"It would not be difficult to point out in this small work at least half a dozen distinct gains to the science."—Prof. COLLINS DENNY, *Vanderbilt University, Nashville, Tenn.*

RHETORIC

THE FOUNDATIONS OF RHETORIC. By ADAMS SHERMAN HILL of Harvard University. pp. ix., 337. 12mo, cloth, $1.00. Introduction price, 80 cents.

"It is the most interesting and the most helpful book on English composition that I have ever seen, and I purpose to use it in all my classes next year as a text-book of reference."—ARTHUR J. ROBERTS, *Instructor in Rhetoric, Colby University.*

ROMAN HISTORY.

A HISTORY OF THE ROMAN EMPIRE. (*Students' Series.*) From its Foundation to the Death of Marcus Aurelius (27 B.C.–180 A.D.) By J. B. BURY, M.A., Fellow and Tutor of Trinity College, Dublin. With Illustration and Maps. pp. vii., 638. 12mo, cloth, $1.50. Introduction price, $1.25.

"Mr. Bury's narrative shows abundance of learning, it is pleasantly written, and will fulfil admirably the purpose for which it was designed. The three chapters on literature are exceedingly well done. There are six maps and plans, and 75 illustrations. Mr. Bury's Roman Empire is a worthy addition to the Students' Series, and no higher praise than this need be given."—*Boston Beacon.*

"Schoolmasters owe Prof. Bury a debt of gratitude. The personal history of the first great Cæsars is as fascinating as a novel; the events which happened under their rule have largely shaped the history of the world, while the literature of the period remains a living force in every civilized region of the world. Yet, curiously enough, 'there exists no English handbook dealing with this part of history suitable for use in universities and schools.' Prof. Bury has admirably supplied this defect by the present work."—*The Bookman, London.*

ETHICS

THE PRINCIPLES OF ETHICS. By BORDEN P. BOWNE, Author of "Metaphysics," "Introduction to Psychological Theory," etc. pp. xv. 309. 8vo, cloth, $1.75. Introduction price, $1.46.

"I have been using the book this year, and in my judgment is the best book in the field."—B. P. RAYMOND, *President Wesleyan University, Middletown, Conn.*

SCHOOL CLASSICS

These works are of a high standard of literary excellence, bound in cloth in uniform style, printed in clear type on good paper, and specially adapted to the purposes of supplementary reading. Price, 30 cents each. Introduction price, 25 cents.

A sample copy of any one of the books mentioned in the foregoing list will be sent, postpaid, to any teacher who may wish to examine it, on receipt of the Introduction price as quoted.

MEISTERSCHAFT

Two New Books by Cunningham Geikie, D.D.

New Testament, Hours with the Bible.

THE GOSPELS: A companion to the "Life of Our Lord," with maps and illustrations. By CUNNINGHAM GEIKIE, D.D., LL.D. This is the first volume of the New Testament series of "Hours with the Bible," the well-known commentary by Dr. Geikie.

Published in style and size corresponding with the new edition of the Old Testament series. 12mo, at $1.50.

Landmarks of Old Testament History.

By Rev. CUNNINGHAM GEIKIE, D.D., LL.D. Studies in Bible history from time of Samuel to time of Malachi. 12mo, cloth; price, $1.50. A succession of brief, vivid pictures of Old Testament life.

BY THE SAME AUTHOR.

Hours with the Bible;

Or, The Scriptures in the Light of Modern Knowledge. Old Testament Series. Entirely new edition, revised and largely rewritten. Printed from new plates, on special paper. Beautifully bound in maroon cloth, gilt lettering. 6 vols., in box. Price, $7.50.

"A work beyond criticism. It gives the concentrated results of many lines of investigation, and is in itself a whole library."—*The Churchman.*

The Holy Land and the Bible.

A Book of Scripture Illustrations Gathered in Palestine. A new edition, thoroughly illustrated. 2 vols. $5.00.

"It is full of intense interest from beginning to end, and is crowded full of information of the highest importance for the understanding and intelligent reading of the Holy Scriptures of both the Old and the New Testaments."—*Notice from Advance Sheets.*

ALSO, JUST READY.

TERCENTENARY EDITION OF

Walton's Angler.

Over fifty Illustrations, many being copies of pictures painted by John Linnell, Senior, three of which are now published for the first time and are etched, together with a portrait of John Linnell. By PERCY THOMAS R.P.E. Also, as a special feature of this edition, are added many artistic drawings of riverside animals and birds, by G. E. Lodge.

Edition de Luxe. 350 copies signed. 50 copies only for the United States. Two volumes, quarto, about 300 pages each, half vellum, cloth sides. The book is printed at the Ballantyne Press, Edinburgh, on Dickinson's hand-made paper, and the plates on Japanese vellum. **Price, $37.50.**

Descriptive Circular on application.

JAMES POTT & CO.,

114 FIFTH AVE., NEW YORK.

LONGMANS, GREEN, & CO.'S PUBLICATIONS.

Plays of Shakspeare. Falcon Edition

With Introduction, Notes, and Glossary to each Play. Fcp. 8vo. Each Play, 35 cents.

Elementary Physiography:

An Introduction to the Study of Nature. By JOHN THORNTON, M.A. With 10 maps and 161 Illustrations. (LONGMANS' ELEMENTARY SCIENCE MANUALS). Crown 8vo. 80 cents.

Longmans' School Geography.

By GEORGE G. CHISHOLM, M.A., B.Sc., and C. H. LEETE, M.A., Ph.D. Fourth Edition. Revised. Large 12mo. With 70 Illustrations. $1.25.

"The closing paragraph of the prospectus is much closer to the opinion of the reviewer than such paragraphs usually are: 'This text-book adapts itself to pupils of intelligence and will be highly appreciated by all teachers imbued with a spirit for teaching real geography, not attempting to supersede their functions by dictating the length of the daily tasks or the questions that shall be asked, but furnishing a body of material so selected, arranged, and presented that its perusal is at once pleasurable, suggestive, and of substantial value.' This is perfectly true. . . . On the whole the book is remarkably successful."—*Nation, N. Y.*

Questions Based on Longmans' School Geography.

Large 12mo, 40 cents.

Longmans' New School Atlas.

Consisting of 38 Colored Maps, with 22 Insets and a very full Index. Imperial 8vo. $1.50.

*** Longmans' New School Atlas offers a series of Maps which it is believed will be found fully adequate for the most advanced school work, affording the material for careful and prolonged study and a basis for a broad knowledge of geographic principles and facts.

The Geological Map of the United States and Canada was revised by Mr. W. J. McGee, of the U. S. Geological Survey, and in this map the Standard Color scheme now adopted for the maps of that Survey has been followed.

A prospectus describing the Atlas, with a Specimen Map, may be had on application to the Publishers.

*** *A General Prospectus, covering the 'School Geography,' 'School Atlas,' and 'Questions,' which relate to one another and which are intended to form a basis for geography study in schools where more than elementary work is done, may be had of the publishers.*

Longmans' New Atlas.

Political and Physical. Consisting of 39 Quarto and 14 Octavo Maps and Diagrams, besides Insets. Engraved by EDWARD STANFORD. Imperial Octavo or Imperial Quarto. Half bound. $3.00.

The present Atlas is designed primarily as an Atlas for educational use. With this view, three things have been aimed at as of chief importance; first, the adequate representation of the physical features; second, the careful and somewhat exclusive selection of names; third, the facilitating of comparison as to size between the countries and regions included in the different maps. But in order that the Atlas may also be used *as a work of reference*, a great many more names have been included in the Index than are named on the maps. The position of such places, when sought for, can thus be easily found. . . . The American maps are new and were drawn specially for this Atlas.

Longmans' Atlas of Ancient Geography.

Twenty-eight entirely new Colored Maps, drawn and engraved by E. WELLER, F.R.G.S. Edited, with an Introduction on the Study of Ancient Geography, by the REV. GEORGE BUTLER, Principal of Liverpool College. Imperial 8vo. $2.00.

Handbook of Commercial Geography.

By GEORGE G. CHISHOLM, M.A., B.Sc.; Fellow of the Royal Geographical and Statistical Societies. 8vo. $4.00.

School Text-book of Commercial Geography.

By GEORGE G. CHISHOLM, M.A., B.Sc. 12mo, 90 cents.

This book is in the main an abridgment of the author's Handbook of Commercial Geography. In making the abridgment, endeavor has been made to retain as much as possible of the matter that seemed fitted to present the leading facts of international commerce in such a way as to impress the memory. The description of countries is confined to features of importance in relation to commerce.

Our Classified Catalogue of School Books, covering works in all branches of Education, sent to any address, upon request.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th Street, NEW YORK.

MACMILLAN & CO.'S PUBLICATIONS.

Practical Books for Architects and Students.

SAFE BUILDING.

By LOUIS DE COPPET BERG. In two volumes, square 8vo. Illustrated. Price, $10.00.
The volumes may be had separately, at $5.00 each.
*** An edition of Vol. I. may also be had in pocket form, flexible roan, with flap. Price, $3.00.

CONTENTS.

VOLUME I.

Chapter I. Strength of Materials.
II. Foundations.
III. Cellar and Retaining Walls.
IV. Walls and Piers.
V. Arches.
VI. Floor Beams and Girders.
VII. Graphical Analysis of Transverse Strains.

VOLUME II.

Chapter VIII. The Nature and Uses of Iron and Steel.
IX. Rivets, Riveting, and Pins.
X. Plate and Box Girders.
XI. Graphical Analysis of Strains in Trusses.
XII. Wooden and Iron Trusses.
XIII. Columns.
Tables. Index.

These papers are the work of a practising architect, and not of a mere book-maker or theorist. Mr. Berg, aiming to make his work of the greatest value to the largest number, has confined himself in his mathematical demonstrations to the use of arithmetic, algebra, and plane geometry. In short, these papers are in the highest sense practical and valuable.

BUILDING SUPERINTENDENCE.

A Manual for Young Architects, Students, and others interested in Building Operations, as carried on at the present time. By T. M. CLARK, Fellow of the American Institute of Architects. In one volume, square 8vo. Illustrated with 194 Plans, Diagrams, etc. Price, $3.00.

CONTENTS.

Introduction—The Construction of a Stone Church—Wooden Dwelling Houses—A Model Specification—Contracts—The Construction of a Town Hall—Index.

Every person interested in building should possess this work, which is approved as authoritative by the best American architects, and has been used for years as a text-book in the chief architectural schools in the United States.

BY THE SAME AUTHOR.

ARCHITECT, OWNER, AND BUILDER BEFORE THE LAW.

Square 8vo. *In the Press.*

HOUSE ARCHITECTURE.

By J. J. STEVENSON, Fellow of the Royal Institute of British Architects. With Illustrations. In two volumes. Royal 8vo. Price, $10.00.
Vol. I. Architecture. Vol. II. Planning.

INIGO JONES AND WREN;

Or, The Rise and Decline of Modern Architecture in England. By W. J. LOFTIE, author of "A History of London," etc. Fully illustrated from prints and photographs. Imperial 8vo, cloth extra, 284 pp. Price, $4.50.

"In the volume an attempt is made to unravel the history of Inigo Jones's two great designs for Whitehall, and to elucidate the different schemes made by Wren for St. Paul's. The illustrations are from published plates, largely supplemented by photographs, especially of those charming buildings of the Transitional Period which are to be found in the West country, where the Bath stone forms such a ready vehicle for the expression of poetry in stone."—*Publishers' Circular.*

*** *Messrs. Macmillan & Co. beg to announce that they have also bought from Messrs. Ticknor & Co., Boston, Prof. William R. Ware's work entitled*

MODERN PERSPECTIVE.

A Treatise upon the Principles and Practice of Plane and Cylindrical Perspective. By WILLIAM R. WARE, Professor of Architecture in the School of Mines, Columbia College. Fifth Edition. Square 8vo, cloth. With accompanying Atlas of Plates. Price, $5.00.

MACMILLAN & CO., 66 Fifth Avenue, New York.

HIGH-GRADE TEXT-BOOKS.

FRENCH TAUGHT DELIGHTFULLY.

MAGILL'S READING FRENCH GRAMMAR,

MAGILL'S MODERN FRENCH AUTHORS.

Vol. 1. FRANCISQUE SARCEY. Vol. 2 MADAME DeWITT (*née* Guizot). **Vol. 3. ANATOLE FRANCE.**

By EDWARD H. MAGILL, A.M., LL.D.,
Ex-President of and Professor of French in Swarthmore College.

NOTE.—These books teach to read French rapidly. The Grammar follows methods used successfully by Dr. Magill in the class-room. The Authors' Series contains the best stories of the best living French authors, with portraits, biographies, and annotations. In each case the author's consent to the publication has been secured The books are all neatly and substantially bound in cloth.

BROOKS'S MATHEMATICAL SERIES.

Brooks's Standard Arithmetics.
Brooks's Union Arithmetics.
Brooks's Higher Arithmetics.
Brooks's Elementary Algebra.
Brooks's Elementary Geometry and Trigonometry.
Brooks's Plain and Solid Geometry.
Brooks's Plain and Spherical Trigonometry.
Brooks's Philosophy of Arithmetic.

By EDWARD BROOKS, A.M., Ph.D.
Superintendent of Philadelphia Schools.

NOTE.—Brook's Mathematical Series has the unanimous endorsement of all teachers who have used the books in the school-room. These books stand the test of use.

JUST PUBLISHED:

COLLEGE PREPARATORY

FRENCH GRAMMAR

BY CHARLES P. DU CROQUET.

12mo, Cloth, Half Leather, 284 pages. $1.25. Introduction Price, $1 00.

Contes de Balzac. Edited with introduction and notes, by George McLean Harper, Ph.D., Assistant Professor of French in Princeton University, and Louis Eugene Livingood, A.B., formerly instructor in French and German in Princeton University. 12mo, cloth, 221 pages, $1.00. The stories selected are representative both of Balzac's style and of the scope of La Comedie Humaine.

Short Selections for Translating English into French By Paul Bercy, B.L ,L.D., author of "Livre des Enfants," "Le Français Pratique," "La Langue Française," etc., etc. 12mo, cloth, 75 cents. These selections are so arranged that the study is progressive, and each exercise is succeeded by explanatory and grammatical notes. At the end of the volume are a few examination papers bearing upon the subject, and used recently at various colleges

Le Francais par la Conversation. By Chas P. Du Croquet, author of "College Preparatory French Grammar," etc. 12mo, cloth, 186 pages, 30 illustrations, $1.00. This work will be found of great help towards enabling the student to converse fluently in French. At the end of the volume is a collection of familiar French songs arranged to music.

The Table Game Part I. By Helene J. Roth. Price, 75 cents. This French game is published for the object of familiarizing pupils with the names of everything that is placed on the dining-room table.

Conjugation of the French Verb. A blank arranged in tablets of fifty, for the use of students. Price per tablet, 30 cents.

Conjugation of the Latin Verb. A blank arranged in tablets of fifty, for the use of students. Price per tablet, 20 cents.

Complete Catalogue and list of other new publications on application.

BIBLIOGRAPHICA.

A Magazine of Bibliography to be Completed in Twelve Quarterly Parts.

Messrs. Charles Scribner's Sons beg to announce that they will issue in America a Quarterly Magazine of Bibliography in its Historical and Artistic Aspects, to be published in London by Messrs. Kegan Paul, Trench, Trübner & Co. It will comprise a series of papers by writers of authority, on various points of book-lore which are of interest at the present day, and which require special treatment without being of sufficient importance to be made the subject of separate works. The magazine will be printed on hand-made paper, large imperial octavo, and the price to subscribers will be $8.00 *net* per annum for four numbers. The edition for England and America will be identical in imprint and all other particulars. Sold only by subscription; and subscriptions taken only for the complete work of twelve parts, payable in three annual payments of $8.00 each in advance. Detailed prospectuses may be had on application.

Part I., now ready, contains the following articles:

A COPY of CELSUS from the LIBRARY of GROLIER. W. Y. FLETCHER.
CHRISTINA of SWEDEN and HER BOOKS. CHARLES I. ELTON.
RAOUL LEFEVRE and 'Le RECUEIL des HISTOIRES de TROYE.' H. OSKAR SOMMER.
NAMES and NOTES in BOOKS. ANDREW LANG.
The ACCIPIES WOODCUT. R. PROCTOR.
La BIBLIOPHILIE MODERNE. OCTAVE UZANNE.
THOINAN'S 'Les RELIEURS FRANCAIS.' Miss PRIDEAUX.
The STATIONERS at the SIGN of the TRINITY. E. GORDON DUFF.
The BOOKS of HOURS of GEOFFROY TORY. ALFRED W. POLLARD.
NOTICES:—1. Dr. Kristeller on Italian Printers' Marks. 2. Mr. Gosse's Catalogue and its Stevensoniana.

A special feature in the Magazine will be the admission of articles in French as well as English. The Publishers have already secured the coöperation of M. Octave Uzanne, M. Henri Béraldi, and Mlle. Pellechet, and arrangements are being made with other foreign writers and specialists.

CHARLES SCRIBNER'S SONS,
743-745 Broadway, New York.

READY SHORTLY.

1 vol. 12mo, cloth, 200 pp., with numerous Illustrations.

New Roads and Road Laws

IN THE

UNITED STATES.

By ROY STONE,

Vice-President National League for Good Roads, and U. S. Special Agent and Engineer for Road Inquiry, Department of Agriculture.

General Stone has enjoyed unequalled opportunities for obtaining information on this subject, and the book is replete with valuable practical suggestions, both as to road legislation and road construction. Its record of actual progress gives hope of an early realization of the benefits of good roads throughout the country.

D. VAN NOSTRAND COMPANY,
PUBLISHERS,
23 Murray and 27 Warren Streets, New York.

WORKS RECENTLY PUBLISHED BY

S. C. Griggs & Company.

The Union Pacific Railway:

A Study in Railway Politics, History, and Economics. By JOHN P. DAVIS. 1 Vol., 8vo, with maps. Price $2.00.

The New York World says: "Has the fascination of a novel. The treatment is a full, clear, and practical presentation of the origin, development, and present status of the Pacific railroads. The information contained in this volume has never before been gathered together in any form or shape. Should be in every public library."

Henry C. Adams, Ph.D., Professor of Political Economy and Finance, University of Michigan, says: "I regard this book as one of the most valuable of recent contributions to the bibliography of railways. It is of interest to the historian, the economist, and the statesman."

The Secret of Character Building.

By JOHN B. DE MOTTE, A.M., Ph.D. 1 volume. Finely illustrated. Price $1.00,

"It is a thoughtful book and suggests a momentous fact in the building of human character."—*Lutheran Observer, Philadelphia, Pa.*

"In suggestiveness and high moral impulse this little monograph is worth a dozen volumes of ethical philosophy to most men."—*Church Standard, Philadelphia, Pa.*

Bulls and Blunders.

Edited by MARSHALL BROWN. One volume. 368 pp. Cloth. Price $1.00.

"A larger and more varied collection of humorous sayings cannot be found in any book of similar size. The author has done his work well, and there are but few paragraphs in the entire collection that do not contain a point to be appreciated by any one 'who hath music in his soul.' It is a good book to drive away the blues,"—*The American Journal of Politics, New York.*

A Syllabus of Ethics.

By WILLIAM M. BRYANT, M.A., author of "World Energy and Its Self-Conservation," Instructor in Mental and Moral Philosophy, St. Louis Normal and High School. Paper, 25 cents.

The work omits minor details and emphasizes recognized fundamental principles with reference to their practical application. A selected list of reference books at the close of the work, with an outline of what is taught in each, will prove helpful to all who wish to enter upon an extended study of ethics.

A Syllabus of Psychology.

By WILLIAM M. BRYANT. Paper. Second edition. Price, 25 cents.

"It presents a systematic bird's-eye view of the subject, whose value cannot be overstated."—*The Independent, New York.*

Eternity.

A thread in the weaving of a life. By WILLIAM M. BRYANT. Paper, 40 pages, price 25 cents.

"One cannot read this clear, devout, and profound exposition without receiving a good deal of helpful suggestion."—*New York Evangelist.*

Ethics and the New Education.

By WILLIAM M. BRYANT. Paper, 25 cents.

"In this work are two studies of masterly power and remarkable interest, Shakespeare's 'The Tempest' and Hugo's 'Les Miserables.' They are profound ethical studies, and strongly illustrate the New Education."—*Boston Home Journal.*

The Youth of Frederick the Great.

By ERNEST LAVISSE, Professor at the Sorbonne, Paris. Translated from the French by Mary Bushnell Coleman. 462 pages. Cloth, $2.00.

"No mere novel can surpass the attractions of this narrative, which delights as it instructs, and informs as it entertains."—*Public Ledger, Philadelphia.*

England and Its Rulers.

A Concise Compendium of the History of England and Its People. By H. POMEROY BREWSTER and GEORGE H. HUMPHREY. 1 vol., 350 pages, cloth. Price, $1.50.

"A clear, concise, and admirably arranged work—a book for the busy man and valuable for scholars and those in literary life. The arrangement is admirable, enabling the reader to immediately find any desired fact. The numerous tables also make it specially valuable for students and those whose time is limited. It is a book needed in almost all private libraries."—*The Arena, Boston.*

Sold by Booksellers, or will be sent, postpaid, on receipt of price, by the publishers,

S. C. GRIGGS & CO.,

262 and 264 Wabash Ave., Chicago,

Warne's Library of Natural History.

Published Monthly. Price 50 Cents.

MESSRS. FREDERICK WARNE & CO. take pleasure in announcing that on May 1 they will commence the issue of a new monthly serial under the above title, of which the first instalments will compose

The Royal Natural History.

Edited by Mr. RICHARD LYDEKKER, B.A., F.G.S., F.Z.S., joint author of "An Introduction to the Study of Mammals," etc. The Preface by P. L. Sclater, M.A., Ph.D., F.R.S., Secretary of the Zoölogical Society of London.

In WARNE'S ROYAL NATURAL HISTORY the animals of sport for the first time secure the space to which their importance entitles them; their geographical distribution, as well as the kind of country they inhabit and the modes in which they are hunted, receive due mention, and, wherever possible, measurements are given, not only of the animals themselves, but of their horns and antlers, and other trophies of the chase. In the other sections of the work similar care has been taken with these interesting details, and the text throughout is as fully descriptive of habits and haunts and modes of capture as of structural features and distinctive peculiarities. A large proportion of the work is devoted to the Mammalian class, as being of the first importance. The Birds, Fishes, Reptiles, and Invertebrata will also receive exhaustive attention at the hands of eminent specialists. The Pictorial Element will be particularly valuable and attractive. Some 1,600 full-page and other Illustrations (as well as two colored plates in each number), will be comprised in the work when finished.

This portion of the "Library of Natural History" will occupy 36 monthly numbers, and will be published at 50 cents a month. Subscriptions, payable in advance, $5.50 per annum, or the 36 numbers for $15.00, mail free.

*** *We have nearly ready a complete and superb 16-page prospectus, which will be supplied on application.*

Subscriptions can be placed with any bookseller, or forwarded direct to the Publishers,

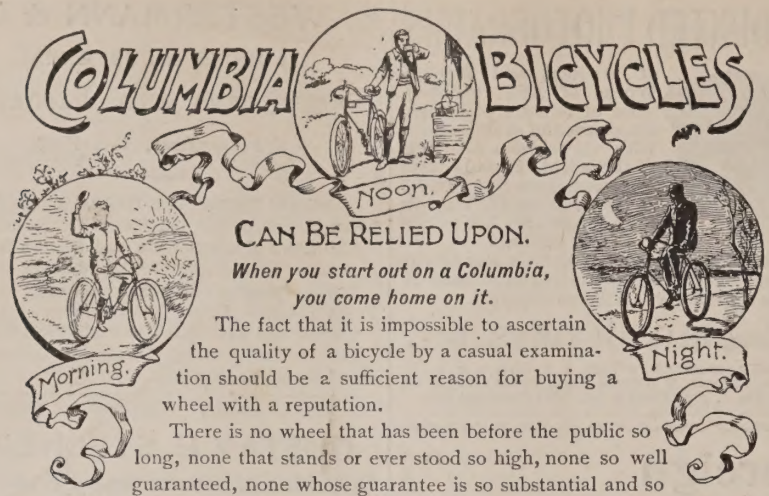
COLUMBIA BICYCLES



CAN BE RELIED UPON.

When you start out on a Columbia, you come home on it.

The fact that it is impossible to ascertain the quality of a bicycle by a casual examination should be a sufficient reason for buying a wheel with a reputation.

There is no wheel that has been before the public so long, none that stands or ever stood so high, none so well guaranteed, none whose guarantee is so substantial and so liberally interpreted, none so safe to buy as a Columbia.

With Columbias listed at $125, few riders will be so unwise as to invest in lower grade bicycles.

Catalogue free at our agencies, or mailed for two 2-cent stamps.

SCHOOL OF APPLIED ETHICS.

SUMMER SESSION, 1894—PLYMOUTH, MASS., JULY 12 TO AUGUST 15.

Economic aud social questions will be discussed from various points of view by a large corps of able lecturers. The courses in each Department will bear upon the Labor Question and allied subjects.

Plymouth has proved a most attractive place for a Summer School. Good sailing and sea-bathing, beautiful drives and many places of great historic interest.

Tuition: $20 for all lectures; $15 for any two departments; $10 for one Department.

Board: $7 to $18 per week. Apply to H. N. P. Hubbard, or A. S. Burbank, Plymouth, Mass.

For Program, giving further details, which will be ready soon, apply to the Secretary of the School, S. BURNS WESTON, 118 South 12th Street, Philadelphia, Pa.

COURSES OF LECTURES.

Physics, two courses.
Chemistry, four courses, viz:
  Fundamental Principles of Chemistry,
  Qualitative Analysis.
  Quantitative Analysis,
  Organic Chemistry.
Botany: Vegetable Morphology and Physiology and Microscopical Anatomy of Phaenogams.
Geology, four courses.
Physical Training, two courses.
Courses at the Medical School.

Women as well as men are admitted to these courses, except those in the Medical School, those in Engineering, and the two more advanced courses in Geology.

During the session of the schools the College Library will be open from 9 A. M. till 5 P. M. The Museum of Comparative Zoölogy, the Peabody Museum, the Semitic Museum, and the Mineralogical Collection are also accessible to students during the summer vacation.

In general, the fees for the above-mentioned courses, except those in Chemistry, Botany, Engineering, Physical Training, and Elocution, are $20 for each course, which are payable in advance to the Bursar of Harvard University, Cambridge, Mass

Board and lodging may be obtained in Cambridge during the summer vacation at a cost of from $5 to $10 per week. Students are advised to take their meals at the restaurant provided by the committee, in Foxcroft House, where food will be provided at cost.

Other information may be obtained on application to *The Secretary of Harvard University, Cambridge, Mass.*

G. P. Putnam's Sons,

NEW YORK AND LONDON.

HAVE NEARLY READY:

Piers Plowman
1363-1399.

A Contribution to the History of English Mysticism. By J. J. JUSSERAND, author of "The English Novel in the Time of Shakespeare," "English Wayfaring Life in the Middle Ages," etc. 12mo, $3.50.

THE INCOGNITO LIBRARY.

Short Pseudonymous Stories by Representative Writers.

VOLUME I.

The Shen's Pigtail.

By Mr. M——.

To be followed by

"Young Sam and Sabina," by Tom Cobbleigh; "The Hon. Stanbury and Others," by "Two"; "Helen," by the author of "The Passing of a Mood"; "Cliff Days," by X; "Lesser's Daughter," by Mrs. Andrew Dean, etc., etc.

Harvard Stories.

Sketches of the Undergraduate. By W. K. POST. Second Edition. 12mo, cloth, $1.25; Popular Edition, paper, 50c.

"Mr. Post's manner of telling these tales is in its way inimitable. The atmosphere of the book in its relation to the localities where the scenes are laid is well nigh perfect. The different types of undergraduates are clearly drawn, and there is a dramatic element in most of the stories that is very welcome. It goes without saying that Harvard man will find keen pleasure in this volume, while for those who desire a faithful picture of certain phases of American student life it offers a noteworthy fund of instruction and entertainment."—*Literary News.*

The Story of Margredel.

Being a Fireside History of a Fifeshire Family. By D. STORRAR MELDRUM. Third edition. 16mo, cloth, $1.00; popular edition, paper, 50 cents.

"The story is in style a little masterpiece. Before I had read five pages I knew I was face to face with a book which would live. A place in the front rank among the coming men must be ceded to the author of this delightful book."—*Jerome K. Jerome.*

"It is a tale of passion and retribution. . . . 'THE STORY OF MARGREDEL' is told with brevity, force and reticence. . . . Perhaps the finest thing in the book is the portrait of Mrs. Douglas Oliphant, a woman whose entire history—an uncommonly moving one—the reader seems to know; but it is done with so few strokes that the reader wonders how he knows it. Mr. Meldrum's work has distinct power and originality."—*The British Weekly.*

The Bayadere, and Other Sonnets.

By FRANCIS A. SALTUS. Limited letter-press edition, with portrait. 8vo, half morocco, $3.00.

JUST PUBLISHED:

The Natural Law of Money.

Wherein the successive steps in the growth of money are traced from the days of barter to the introduction of the modern clearing-house, and monetary principles are examined in their relation to past and present legislation. By WILLIAM BROUGH. 12mo, $1.00.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th Street, NEW YORK,

BIOLOGY, ZOÖLOGY, AND PHYSIOLOGY.

Dodge's Introduction to Elementary Practical Biology. (Just published.)

A Laboratory Guide for High School and College Students. By CHARLES WRIGHT DODGE, M.S., Professor of Biology in the University of Rochester. Crown 8vo, cloth, 445 pages. $1.80.

The guide consists essentially of questions on the gross and minute structure and on the physiology of a series of common animals and plants which are typical of their kind—questions which can be answered only by actual examination of the specimen or by performance of the experiment. Directions are given for the collection of specimens, for their preservation, and for preparing them for examination, also for performing simple physiological experiments. Particular species are not required, as the questions usually apply equally well to several related forms.

The material of which the guide is composed has been gradually accumulated during an experience of nearly seven years of teaching high school and college classes, consisting of students of both sexes and of ages varying from fourteen to fifty years. With the exception of a few additions made while preparing the manual for printing, all of the work detailed has been performed by college students, and a very large part by students in the second year of their high-school course.

"I think the plan of this work is admirable. It is designed to bring out the peculiar educational value of biological training, namely, the cultivation of direct observation; and Professor Dodge has succeeded in adhering to this plan, producing a work which is thoroughly accurate and will be of great value."—HENRY F. OSBORN, *Da Costa Professor of Biology, Columbia College.*

"It is the best book on the subject for our public schools, without exception, that I have seen."—ELIZABETH P. ROLLINS, *Teacher of Natural Science High School, Fall River, Mass.*

"I have examined it carefully and critically; and to test its working value I have permitted one of the pupils of my elementary biology class to use the text as a laboratory guide. Next year I expect to use this text in my class in elementary biology."—C. H. TURNER, *Professor of Natural Science, Clark University, South Atlanta, Ga.*

"I am very much pleased with the general plan, and think it the most helpful laboratory guide in biology that has yet appeared. I shall certainly take the occasion to try it in my classes."—H. W. CONN, *Professor of Biology, Wesleyan University, Middletown, Conn.*

Orton's Comparative Zoology

Comparative Zoology, Structural and Systematic. For Use in Schools and Colleges. By JAMES ORTON, Ph.D. pp. 414. With 350 Illustrations. Revised Edition, Crown 8vo, Cloth, $1.80.

The distinctive character of this work consists in the treatment of the whole Animal Kingdom as a unit; in the comparative study of the development and variations of organs and their functions, from the simplest to the most complex state; in withholding Systematic Zoology until the student has mastered those structural affinities upon which true classification is founded; and in being fitted for High Schools and Mixed Schools by its language and illustrations, yet going far enough to constitute a complete grammar of the science for the undergraduate course of any college.

It is so agreeably written and so admirably illustrated that it might almost be said to do its own teaching.—*Philadelphia Inquirer.*

It is also well adapted for family reading, a multitude of illustrations giving it all the charm of a well stuffed picture-book.—*N. Y. Journal of Commerce.*

Draper's Physiology

Human Physiology, Statical and Dynamical; or, The Conditions and Course of the Life of Man. By JOHN W. DRAPER, M.D., LL.D. pp. xvi., 650. With Index. Illustrated. 8vo, Cloth, $3.50.

A book that is full of interest, containing many striking views and novel and experimental illustrations. We make our sincere acknowledgments to the author for the fresh contributions he has furnished to our knowledge of the laws of life, and the new impulse he has imparted to the study of its mysteries.—*North American Review.*

Draper's Anatomy, Physiology, and Hygiene.

A Text-Book on Anatomy, Physiology, and Hygiene. For the Use of Schools and Colleges. By JOHN C. DRAPER, M.D., LL.D., Professor of Natural History and Physiology in the College of the City of New York, and Professor of Analytical Chemistry in the University of New York. pp. 260. Illustrated. 8vo, Cloth, $2.50.

A sample copy of any one of the books mentioned in the foregoing list will be sent, postpaid, to any teacher who may wish to examine it, on receipt of price. Special terms will be made for introduction on request. Address

HARPER & BROTHERS, Publishers, Franklin Square, New York City.

OLMSTED'S COLLEGE PHILOSOPHY.

FOURTH REVISION. By SHELDON. An Introduction to Natural Philosophy Designed as a Text-Book in Physics for the Use of Students in College. By DENISON OLMSTED, LL D., revised by E S SNELL, LL.D., and R. G KIMBALL, Ph D. *Fourth Revised Edition*, by SAMUEL SHELDON, Ph.D. (Würzburg), Professor of Physics and Electrical Engineering, Polytechnic Institute of Brooklyn. 8vo, pp xiii., 466. Price, for introduction, $2.50; by mail, $2.75. Copies for examination mailed to Professors upon receipt of Two Dollars.

The Third Revision of Olmsted's Natural Philosophy was published in 1882. Since that date many changes have been made in the technical nomenclature of Physics, many improvements in the methods of presentation of complicated portions of the science have been published by experienced educators, and, above all, the whole subject of Electricity and Magnetism has outgrown its former apparel. For the Fourth Revisi n the whole book has been carefully gone over, the requisite changes made, and several chapters entirely rewritten.

Many new engravings from drawings made expressly for this edition have been inserted.

The experience of those who have used this Revision is proof of its value as a text-book in Physics adapted to the requirements of a college course. As now presented it is believed to contain all that is necessary for this department of a liberal education.

OLMSTED'S COLLEGE ASTRONOMY.

THIRD STEREOTYPE EDITION, REVISED, WITH ADDITIONS BY COFFIN An Introduction to Astronomy for the Use of Students in College. By DENISON OLMSTED, LL D., Professor of Astronomy in Yale College, and E. S. SNELL, LL.D., Professor of Mathematics in Amherst College. Third Edition, revised, with additions by Prof. SELDEN J. COFFIN, Lafayette College. Octavo, cloth. Pp. viii., 236, with numerous illustrations and diagrams. Price, for introduction, $1.60; by mail $1.75.

The subject of Spectrum Analysis appearing to demand more extended treatment, Chapter XX. has been prepared for this edition, which also contains a number of revisions and corrections in accordance with the best authorities. A few articles have been rewritten and some matter added.

The special advantages recognized in this text-book are: First—Absence of all superfluous matter and its moderate size, rendering its contents capable of being compassed within the limited time generally allotted to the subject. Second—Its distinct and accurate mathematical demonstrations, showing the strictly scientific basis and methods of astronomical work, and rendering the book valuable, both as a means of mental discipline and as an introduction to the practical application of its principles.

Copies for examination mailed to teachers and professors upon receipt of One Dollar.

COFFIN'S CONIC SECTIONS.

NEW EDITION. Elements of Conic Sections and Analytical Geometry. By JAMES H. COFFIN, LL.D., late Professor of Mathematics and Physics in Lafayette College, and author of treatises on Solar and Lunar Eclipses, Astronomical Tables, The Winds of the Globe, etc. Sixth Edition, revised and improved by SELDEN J. COFFIN, Ph.D., Hollenback Professor of Mathematics in Lafayette College. One volume, 8vo, cloth, pp. 167. Price, for introduction, $1 08; by mail, $1.20.

In this edition are included a number of original Numerical Exercises, adapted to illustrate the meaning of Propositions, and to show the utility of the truths taught.

The student of Conic Sections will welcome the explanation of geometrical points by the introduction of numerous references to the treatises of Professors Loomis and Wentworth, which are given in addition to those to Legendre and Euclid in the earlier editions.

Copies for examination mailed to Professors and Teachers upon receipt of One Dollar.

FOR SALE BY

THE BAKER AND TAYLOR CO., 5 East Sixteenth Street, N. Y.

A LITTLE HIGHER IN PRICE, BUT-

LONGMANS, GREEN, & CO.'S NEW BOOKS.

STANLEY J. WEYMAN'S NEW BOOK.

UNDER THE RED ROBE.

A ROMANCE.

With 12 Full-Page Illustrations by R. CATON WOODVILLE.

12mo, Cloth, Ornamental, $1 25.

"As perfect a novel of the new school of fiction as 'Ivanhoe' or 'Henry Esmond' was of theirs. Each later story has shown a marked advance in strength and treatment, and in the last Mr. Weyman . . . demonstrates that he has no superior among living novelists. . . . There are but two characters in the story—his art makes all other but unnoticed shadows cast by them—and the attention is so keenly fixed upon one or both, from the first word to the last, that we live in their thoughts and see the drama unfolded through their eyes."—*N. Y. World.*

"We need not say that the story is a dramatic one, full of thrilling situations. Mr. Weyman's style is delightful, and we have no hesitation of pronouncing this story a worthy successor of his deservedly popular 'A Gentleman of France.'"—*Boston Advertiser.*

By the Same Author.

A GENTLEMAN OF FRANCE.

Being the Memoirs of Gaston de Bonne, Sieur de Marsac. With Frontispiece and Vignette by H. J. FORD. 12mo, Cloth, Ornamental, $1.25.

"In many respects this book is so noteworthy that it places Mr. Weyman at one stride in the front rank of living novelists. . . . He has caught with singular accuracy the general spirit of an age which is associated with the most brilliant political romances of Dumas; and he displays in dealing with its incidents a conspicuous mastery of its leading characteristics, while he brings to its interpretation not merely knowledge and imagination, but a subtle and delicate appreciation of the lights and shadows of contemporary biography."—*London Spectator.*

THE HOUSE OF THE WOLF.

A Romance. With Frontispiece and Vignette by CHARLES KERR. 12mo, Cloth, Ornamental, $1.25.

"A romance which, although short, deserves a place in literature alongside of Charles Reade's 'Cloister and the Hearth.'"—*Commercial Advertiser, N. Y.*

LETTERS OF HARRIET COUNTESS GRANVILLE, 1810-1845.

Edited by her Son, the Hon. F. LEVISON GOWER. In 2 volumes, With Portrait, 8vo, $9.00.

Truth.—"The collection of letters of Lady Granville is certainly the most entertaining and important work of the kind which has appeared since the Greville Memoirs. The book is full of capital and quite new stories about celebrated people, and both volumes are most delightful reading."

Daily Chronicle.—"Two more delightful volumes for people with memories we scarcely know. They almost deserve to rank with the Memoirs of De Grammont. All 'Society' is shown as in a mirror without a facet or a flaw in it, and how nice reading that is for those who already know something of the period need not be told to-day."

Daily Telegraph.—"This most delightful and most discursive letter-writer. . . . All kinds of figures appear; not only great people like George IV. and the Duke of Wellington, and the Duke de Broglie and Lord Brougham—to say nothing of Queen Victoria herself—but a wonderful variety of lesser lights, men and women who were for the nonce the social rage, or who had done something to amuse or shock, irritate or excite, inflame, or depress, the circle in which they moved."

'JUNIUS' REVEALED.

By his surviving grandson, H. R. FRANCIS, M.A., late fellow of St. John's College, Cambridge. Some last words on the authorship of the Junius Letters. With four facsimiles. 8vo, $1.75.

"His argument is full of interest, and its cumulative force is very great indeed, so great that those who are already convinced will regard it as quite conclusive, while those who still adhere to any other theory will find it a hard nut to crack."—*Times.*

"LAY DOWN YOUR ARMS."

(*Die Waffen Nieder*). The autobiography of Martha Von Tilling. By BERTHA VON SUTTNER. 1 vol., 12mo; new edition, 75 cents.

THE AMATEUR TELESCOPIST'S HANDBOOK.

By FRANK M. GIBSON, Ph.D., LL.B. With Frontispiece and 13 figures in the text. Crown 8vo, Linen Cloth, $1.25.

CONTENTS: I. The Telescope: Its Principles and Powers—II. Testing the Object-Glass, Eyepieces, Tubes—III. The Stand—IV. Accessories of the Telescope—V. The Care of the Telescope—VI. The Use of the Telescope—VII. Observations, Stars, Nebulæ, the Sun and Moon—VIII. Observation, Continued, The Planets—IX. Prices of Telescopes and their Accessories CELESTIAL OBJECTS: Alignment Stars—A Descriptive Catalogue of 408 Celestial Objects.

HISTORY OF ENGLAND UNDER HENRY THE FOURTH.

By JAMES HAMILTON WYLIE, M.A., One of her Majesty's Inspectors of Schools In two volumes. Crown 8vo.

Vol. I.—1399-1404, $3.50.

Vol. II.—1405-1406, 5.00.

THE IDYLLS OF THEOCRITUS.

Translated into English Verse. By JAMES HENRY HALLARD, M.A., Oxon. 8vo, $2.00

"In the large proportion of his renderings Mr. Hallard succeeds in catching something of that drowsy summer note which is the Sicilian poet's great charm. It is no small feat to have done this without any grave departure from the path of scholarly translation, beyond an occasional expansion introduced for the sake of metre or rhyme."—*Times.*

THE KESTREL'S NEST, AND OTHER VERSES.

By ALFRED COCHRANE. Small 12mo, $1.25.

"The book, with its neat turns of verse and many graceful fancies, will be heartily enjoyed by every one who is fond of light reading in poetry."—*Scotsman.*

LONGMANS, GREEN, & CO., Publishers, 15 East 16th St., New York.

The Cassell Publishing Co.'s
NEWEST BOOKS.

BY STANLEY J WEYMAN.

The Man in Black.

By STANLEY J. WEYMAN, author of "The Story of Francis Cludde," "A Gentleman of France," etc. Illustrated by Wal. Paget and N. M Paget. 12mo, cloth, $1 00.

To the reader wearied with the milk and water stories of "society" or the "purpose" novel so often produced only to gratify the vanity of a crank, the publishers recommend this virile production as an antidote. It is full of fire and life, with not too much love and politics to spoil the effect

BY MRS ALEXANDER.

Broken Links: A Love Story.

By Mrs ALEXANDER, author of "The Snare of the Fowler," "The Wooing O't," "Her Dearest Foe," etc., etc. One vol., 12mo, cloth, $1 00.

The simple announcement of a new novel from the pen of Mrs Alexander is sufficient to stimulate the appetites of all lovers of wholesome fiction Her latest work shows no falling off in her powers, and will please every one who appreciates a clean, cleverly worked out, old fashioned love story.

My Two Wives.

By ONE OF THEIR HUSBANDS, in two parts: Part I—My First Wife, by her Second Husband; Part II—My Second Wife, by her First Husband. With an editorial preface by Eldon Phewfees, Esq., etc., etc., and an authorial introduction by Mr. Timothy Moleskin, husband of the two Mrs. Moleskins. In *Cassell's "Unknown" Library.* Cloth, 16mo, 50 cents.

RECENTLY PUBLISHED.

Life and Later Speeches of Chauncey M. Depew.

1 vol., 8vo, extra cloth, gilt top, with new portrait by Sarony, $2.50. Edition de Luxe, limited to 100 copies, half leather, $6.00.

"Foremost among our living American orators is Chauncey M Depew, and in the volume of his speeches just published by The Cassell Publishing Co., N Y., we have American oratory at its best Mr. J. B. Gilder, in his introduction to this volume, gives a most appreciative biographical sketch of the orator, and the volume, as a whole, has a marked historical and biographical value as well as that which comes from its illustration of American oratory at the present day."—*Boston Daily Advertiser.*

Uniform with the above, a new edition of

Orations and After Dinner Speeches of Chauncey M. Depew.

One vol., 8vo, with portrait, etc., $2.50
The two volumes in a neat box, per set, $5.00.

Subscriptions can be placed with any bookseller, or forwarded direct to the Publishers,

F. WARNE & CO., 3 Cooper Union, New York City.

An Educational Directory.

I. THE NATION has a larger circulation than any literary-political journal published in this country. The 10,000 copies printed every week represent but a small part of the actual circulation, as THE NATION goes to all the principal libraries and reading-rooms, and into thousands of families.

II. The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III. The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on eight insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

Sewage Disposal

IN THE

UNITED STATES.

BY

GEO. W. RAFTER, M. Am. Soc. C. E., and M. N. BAKER, Ph.B.,

Associate Editor "Engineering News."

One Volume, 8vo, Illustrated, 600 Pages.

Price, $6.00.

D. VAN NOSTRAND CO.,

PUBLISHERS,

23 Murray and 27 Warren Sts., New York.

The Ethics of George Eliot's Works.

In response to many inquiries we have made a new edition of this remarkable book by JOHN CROMBIE BROWN, with the introduction as written by Rev. Charles Gordon Ames. It is on fine laid paper, title in two colors; bound in silk cloth at 75 cents, and in paper covers, 50 cents.

Bible Heroes.

By WILLIAM HARDCASTLE BROWNE, A.M. A capital book for children. It awakens a keen interest, and makes the most delightful method of making easy the way to Bible truths. New edition, well illustrated, bound in cloth, stamped in colors, 75 cents.

George Eliot's Two Marriages.

By CHARLES GORDON AMES. "The ablest, wisest, and best article written about George Eliot." Sixth edition, wide margin, uncut, paper covers, 20 cents.

Evolution and Religion.

By Rev. M. J. SAVAGE, the eminent Boston divine. A rational view of the subject from one who believes both sides. 12mo, wide margins, paper cover, 25 cents.

Stops; or, How to Punctuate.

A wonderful little book. You will be surprised at its clearness and general good sense. Each rule is followed by practical examples. Can you do without it? Cost trifling—25 cents.

No Sect in Heaven.

By Mrs. E. H. J. CLEAVELAND. The tasteful manner in which the poem is gotten up ought to make it welcome to new and old readers. Hand-made paper covers, 25 cents.

Any book by mail; we pay postage.

ARNOLD & COMPANY

420 Library Street, Philadelphia.

A Charming Wedding Present.

Have you seen *Our Wedding Souvenir?* No wedding complete without it.

A Quarto Volume, 9x11, containing a series of beautifully illuminated pages for the preservation of the signatures of the *Bride and Groom, Best Man, Maid of Honor, Bridesmaids, Ushers, Father and Mother,* and other wedding guests, a marriage certificate, pages for photographs, wedding cards, newspaper notices, etc.

Read what the papers say:

"Among novel and clever ideas for wedding presents the most attractive that has been seen for some time is called 'OUR WEDDING SOUVENIR.' It is an elegant album, made up for the express purpose of preserving permanently a full story of a wedding."—*Hartford Courant.*

"Who can estimate the interest clinging to such a book, which shall contain the signatures of most and perhaps all of those we hold near and dear?"—*Springfield Republican.*

Cloth, $5.00; Plush, $7.50; Seal, $8.00; Tree Calf, Watered Silk, or Full White Morocco, $10.00.

PUBLISHERS,

JOSEPH KNIGHT COMPANY, Boston.

For sale by all booksellers. Ask for it.

Sent by mail, postpaid, on receipt of the price, with privilege of returning if not entirely satisfactory and the money refunded. Mention NATION.

An Income Tax

Is said by many to be inquisitorial and demoralizing. This charge cannot be brought against

THE
Massachusetts BENEFIT LIFE ASSOCIATION

which offers to furnish income when the bread-winner is removed by death, and does it with the smallest possible tax upon his income while he lives.

The Largest and Strongest Natural-Premium Insurance Co. of New England.

$5,000.00 a day paid to beneficiaries at 60% of usual cost.

The **NEW POLICY** of the Massachusetts Benefit Life Association has no superior. It gives **Cash Dividends, Cash Surrender Values, Paid-Up Insurance,** and other desirable options.

Splendid Openings for Energetic Men to Act as Special, General and State Agents.

GEO. A. LITCHFIELD, Pres. 53 State St., Boston.

William Lloyd Garrison,

1805–1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (till recently published by the Century Company), has been reduced in price from $12.00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression: it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

*** *For sale by booksellers. Sent, postpaid, on receipt of price by the Publishers,*

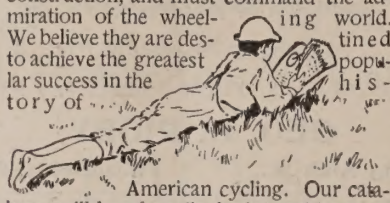
Columbia Bicycles

of 1894



Have made a great stride forward. They are a distinct triumph both in design and construction, and must command the admiration of the wheeling world. We believe they are destined to achieve the greatest popular success in the history of American cycling. Our catalogue will be of particular interest to every intending purchaser of a wheel. You can obtain it free at any Columbia agency, or we will mail it to you for two two-cent stamps.

READY.

A HISTORY OF THE UNITED STATES.

For Schools, Academies, and the General Reader. By ALLEN C. THOMAS, Prof. of History, Haverford College.

The aim of this work is to give the main facts of the History of the United States in a clear and simple style. The book is essentially a history of the country under the Constitution, only about one-third of the book being given to colonial times.

532 pages. Maps and Illustrations. Half leather, $1.25.

Model 37

Columbia,

Price, $150.

This beautiful machine marks the extreme limit to which regular bicycle construction has thus far gone, in lightness combined with strength and durability. It is a semi-racer, built for track work, and for road racing under reasonable conditions, but it will afford the highest satisfaction as a regular mount for light and careful riders who are willing to do without brake and coasters. Weight with wood rims, 21½ pounds.

POPE MFG. CO.,

Charles Scribner's Sons' New Books.

A NOTABLE CONTRIBUTION TO NAPOLEONIC LITERATURE.

THE PASQUIER MEMOIRS.

The Revolution—The Consulate—The Empire. Edited by DUC D'AUDIFFRET-PASQUIER. With Portraits. In 3 vols., 8vo. Vol. II., 1812–1814, now ready, $2.50; Vol. I., 1789–1812, $2.50.

"A rich mine of information. It is of as great interest as importance. His position enabled him to see much; his intelligence and his training made his comprehension thorough and his conclusions of value."—*N. Y. Times.*

JOSIAH GILBERT HOLLAND.

A Memoir. By Mrs. H. M. PLUNKETT. With Portraits and Illustrations. 12mo, $1.50.

Mrs Plunkett was a life-long and intimate friend of Dr. Holland's, and had exceptional opportunities for studying his character. She has drawn largely upon Dr. Holland's record of his own aspirations and achievements, thus giving her work an agreeable autobiographic flavor, and presenting an attractive portrait of a remarkable man.

"A model biography, and a valuable and at the same delightful addition to literature."—*Boston Advertiser.*

OVERHEARD IN ARCADY.

By ROBERT BRIDGES (Droch). With 65 Illustrations by O. HERFORD, F. G. ATTWOOD, and A. E. STERNER. 12mo, $1.25.

A novel and attractive book, made up of a series of bright dialogues, in which the famous characters of the stories of Howells, James, Aldrich, Stockton, Davis, Crawford, Kipling, Meredith, Stevenson, and Barrie discuss their creators with candor, sympathy, wit, and humor.

"The clever way in which a number of characters, created by popular authors, are used in this book will afford delightful entertainment to the lovers of refined fiction."—*Boston Sat. Eve. Gazette.*

NEW OUT-OF-DOOR BOOKS.

ACCORDING TO SEASON.

Talks about the Flowers in the Order of their Appearance in the Woods and Fields. By Mrs. WILLIAM STARR DANA. 16mo, 75 cents.

"The charm of this book is pervading and enduring as is the charm of nature."—*N. Y. Times.*

HOW TO KNOW THE WILD FLOWERS.

A Guide to the Names, Haunts, and Habits of our common Wild Flowers. By Mrs. WILLIAM STARR DANA. With 104 Illustrations. *Sixteenth Thousand.* 12mo, $1.50 *net.*

"It is exactly what has long been wanted by one who loves nature."—*Olive Thorne Miller.*

A SELECTION OF FIFTY PLATES FROM "HOW TO KNOW THE WILD FLOWERS."

Printed on special paper, suitable for coloring by hand. The set, in a portfolio, $1.00 *net.*

DONALD G. MITCHELL'S COUNTRY BOOKS.

MY FARM OF EDGEWOOD—A Country Book. WET DAYS AT EDGEWOOD—With Old Farmers, Old Gardeners, and Old Pastorals. *New Popular Edition.* Each, small 12mo, 75 cents.

Mr. Mitchell's two well-known books have a fresh odor of the fields and gardens, which makes their republication in a new and attractive dress peculiarly appropriate at this season of the year.

OUR COMMON BIRDS, AND HOW TO KNOW THEM.

By JOHN B. GRANT. With 64 Plates. *Eighth Thousand.* Oblong 12mo, $1.50 *net.*

"It is compact, but admirably clear. There is for each bird a description of appearance, habits, and haunts. It is a model in its way."—*Boston Courier.*

ART OUT OF DOORS.

Hints on Good Taste in Gardening. By Mrs. SCHUYLER VAN RENSSELAER. 12mo, $1.50.

"It is sound, helpful, and well written."—*Garden and Forest.*

HOMES IN CITY AND COUNTRY.

By Various Authorities. 100 Illustrations. 8vo, $2.00.

"Not only entertaining, but most useful."—*Chicago Inter-Ocean.*

AN ADVENTURE IN PHOTOGRAPHY.

By OCTAVE THANET. Illustrated. 12mo, $1.50 *net.*

"A novel and delightful book."—*Brooklyn Times.*

NEW BOOKS OF TRAVEL.

BEYOND THE ROCKIES.

A Spring Journey in California. By Dr. CHARLES A. STODDARD, author of "Across Russia" and "Spanish Cities." Illustrated. 12mo, $1.50.

In this new book Dr. Stoddard gives his experiences, and describes in an interesting manner the places he visited in a journey by the southern route to California.

"A very seductive book. It is pleasantly written and draws the reader on with the unfailing and romantic charm of the country."—*The Independent.*

THE BARBARY COAST.

By Dr. HENRY M. FIELD. Illustrated. Crown 8vo, $2.00.

"Alert and interesting travel observations. The volume abounds in picturesqueness of description."—*Brooklyn Eagle.*

THE LAND OF POCO TIEMPO.

By C. F. LUMMIS. Illustrated. 8vo, $2.50.

"A series of interesting sketches of New Mexico. They are picturesque, poetic, glowing in local color."—*Chicago Inter-Ocean.*

NEW FICTION.

ON THE OFFENSIVE.

An Army Story. By GEORGE I. PUTNAM. 12mo, $1.25.

KINDERGARTEN SUPPLIES

at Schermerhorn's, 3 East 14th St., N. Y

GINN & COMPANY PUBLISH

SEVEN NOTEWORTHY SERIES OF TEXT-BOOKS.

Home and School Library Series.

A series of Classics for Schools. Choice literature, judicious notes, large type, firm binding, low prices.

Forty-five volumes now ready.

Athenæum Press Series.

Issued under the general editorship of Professor GEORGE LYMAN KITTREDGE of Harvard University and Professor C. T. WINCHESTER of Wesleyan University.

This series is intended primarily for use in colleges and higher schools; but it will furnish also to the general reader a library of the best things in English letters in editions at once popular and scholarly. The works selected will represent, with some degree of completeness, the course of English Literature from Chaucer to our own times.

Five numbers now ready.

Annotated English Classic Series.

A series of the best English Authors. Edited for school use by able English and American educators and writers.

Eighty-eight numbers now ready.

International Modern Language Series.

The aim of this series is a high one. It is attempting to furnish, in the department of Modern Languages, something analogous to the scholarly and almost perfect editions which may now be had of Latin and Greek authors. The selection of works is made with the greatest possible care and under what is believed to be the best advice Both scholarship and class room experience direct the annotation.

College Series of Latin Authors.

Edited by CLEMENT LAWRENCE SMITH, Professor of Latin in Harvard University, and TRACY PECK, Professor of the Latin in Yale University.

College Series of Greek Authors.

Edited under the supervision of JOHN WILLIAMS WHITE, Professor of Greek in Harvard University, and THOMAS D. SEYMOUR, Hillhouse Professor of Greek in Yale University.

These two series embrace such Latin and Greek Classics as are commonly read in American colleges, with some others that are well adapted for such use but are not now available for lack of suitable editions The several volumes have been prepared by special editors, who present a carefully revised text, with introductions and commentary, embodying, in a practical form adapted to the use of college students, the best contributions of classical scholarship to the criticism and interpretation of the author treated.

School Series of Latin and Greek Authors.

Under the general editorial supervision of WILLIAM C. COLLAR, Headmaster of the Roxbury Latin School, and JOHN TETLOW, Headmaster of the Girls' High and Latin Schools, Boston.

This series is limited to those Latin and Greek authors deemed most suitable to be read in secondary schools. It will include in small volumes the several books of those authors separately edited by competent scholars of experience as schoolmasters.

Two numbers now ready.

Descriptive Circulars of these books sent postpaid to any address. Our Catalogues for 1894 are just out. Sent postpaid to any address.

BUFFALO LITHIA WATER

Goes regularly to Hot Springs for GOUT, RHEUMATIC GOUT, RHEUMATISM.—How this Water is valued there in BRIGHT'S DISEASE OF THE KIDNEYS and STONE OF THE BLADDER.

Dr. Algernon S. Garnet,
Surgeon (retired) *U. S. Navy, Resident Physician, Hot Springs, Ark., says:*

"My experience in the use of

BUFFALO LITHIA WATER

is limited to the treatment of Gout, Rheumatism and that hybrid disease, "Rheumatic Gout" (so-called), which is in contradistinction to the Rheumatoid Arthritis of Garrod. I have had excellent results from this Water in these affections, both **in my own person and in the treatment of patients for whom I have prescribed it.** Of course the remedial agent is its contained Alkalies and their solvent properties. Hence it is a prophylactic as well as a remedy in Nephritic Colic and forming Calculi, when due to a redundancy of Lithic Acid."

Dr. Wm. B. Towles,
Professor of Anatomy and Materia Medica in the Medical Department of the University of Virginia, former Resident Physician, Hot Springs, Va., says:

"I feel no hesitancy whatever in saying that in Gout, Rheumatic Gout, Rheumatism, Stone in the Bladder, and in all Diseases of Uric Acid Diathesis, I know of no remedy at all comparable to

BUFFALO LITHIA WATER

"Its effects are marked in causing a disappearance of Albumen from the urine. In a single case of Bright's Disease of the kidneys **I witnessed decided beneficial results from its use,** and from its action in this case I should have great confidence in it as a remedy in certain stages of this disease."

The late Dr. Wm. F. Carrington,
Resident Physician, Hot Springs, Ark., Surgeon (retired) *U. S. Navy, says:*

BUFFALO LITHIA WATER

has signally demonstrated its remedial power in Gout, Rheumatic Gout, Rheumatism, Uric Acid, Gravel and other maladies dependent upon the Uric Acid Diathesis. It not only **eliminates from the blood the deleterious agent** before it crystalizes, but dissolves it in the form of Calculi, at least to a size that renders its passage along its ureters and urethra comparatively easy. Send twenty cases No. 2."

Dr. T. B. Buchanan,
Resident Physician, Hot Springs, Arkansas, says: "Send me five cases of

BUFFALO LITHIA WATER

I have made use of this Water for Gout in my own person and prescribed it for patients similarly suffering, with the most decided beneficial results. I take great pleasure in advising Gouty patients to these Springs.

This water is for sale by druggists generally, or in cases of one dozen half gallon bottles $5.00 f.o.b. at the Springs. Descriptive pamphlets sent to any address.

THOMAS F. GOODE, Proprietor,

NEW YORK AND LONDON.

HAVE NOW READY:

In Varying Moods.

By BEATRICE HARRADEN, author of "Ships that Pass in the Night." American Copyright Edition. 16mo, cloth, $1.00; paper, 50 cents.

The first large edition was exhausted before the date of publication. New edition now ready.

"I have had the pleasure of reading the advance sheets of this book, and it was a pleasure, I can assure you. . . . There is a sort of humor in Miss Harraden's stories, as if she would make her audience smile just as it was about to weep. Of all the woman writers who have recently come to the fore she is the least feminine; that is, her style is the least feminine. . . . The most enthusiastic admirers of 'Ships that Pass in the Night' will not be disappointed in these stories, and I am inclined to think that they sound a much surer note than does even that remarkable story. . . . ."—*Jeannette L. Gilder in the N. Y. World.*

By the same author:

Ships that Pass in the Night.

By BEATRICE HARRADEN. Authorized American Edition. 16mo, cloth, $1.00; paper, 50c.

"There is a wealth of philosophy, humor, and pathos in this little tale, and it is told so simply that one feels as if he were a part of it, somehow. So truly are the human heartstrings struck that he must be beyond redemption whose inner self does not vibrate in sympathy many times, as the pages are turned. . . . There is not a dull page . . . ; it is one book in ten thousand; you should read it."—*Boston Times.*

The Story of Margredel.

Being a Fireside History of a Fifeshire Family. By D. STORRAR MELDRUM. Third edition. 16mo, cloth, $1.00; paper, 50 cents.

"The story is in style a little masterpiece. Before I had read five pages I knew I was face to face with a book which would live A place in the front rank among the coming men must be ceded to the author of this delightful book"—*Jerome K. Jerome*

"It is distinctly original, and full of a charm quite its own. 'The Story of Margredel' is written by an artist. . . . Mr. Meldrum has proved himself master of a style all too rare in its simplicity and graphic power."—*The Observer.*

Harvard Stories.

Sketches of the Undergraduate. By W. K. POST. Third Edition. 12mo, cloth, $1.00; Popular Edition, paper, 50c.

"Mr. Post's manner of telling these tales is in its way inimitable. The atmosphere of the book in its relation to the localities where the scenes are laid is well nigh perfect. The different types of undergraduates are clearly drawn, and there is a dramatic element in most of the stories that is very welcome. It goes without saying that Harvard men will find keen pleasure in this volume, while for those who desire a faithful picture of certain phases of American student life it offers a noteworthy fund of instruction and entertainment."—*Literary News.*

The Upper Berth.

By F. MARION CRAWFORD. 32mo, limp cloth, 50 cents. (Being Vol. I. of the Autonym Library, the new series of short representative works of fiction by well-known authors.)

Tennyson:

His Art and Relation to Modern Life. By STOPFORD A. BROOKE, M.A. 12mo, $2.00.

"The best single volume that has yet been written about the late Laureate of England. . . . Mr. Brooke's mental vision detects qualities in the work of Tennyson which had escaped the notice of most contemporary critics—limitations in his sympathies and defects in his art. . . . Tennyson was not an epical poet nor a dramatic poet, but the most exquisite writer of purely idyllic verse that ever shaped his fancies in English speech—great in a surer sense than Keats, except in instinctive touches, but not so absolutely great as Landor, who is austere when he is lovely, and ancient when he is modern. Mr. Brooke perceives clearly these qualities of Tennyson, . . . while his sagacity and his insight make his scanty blame as authoritative as his heartiest praise"—*R. H. Stoddard, in the Mail and Express.*

*** *Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

Get a COLUMBIA

IT IS ECONOMY TO BUY THE BEST.

Columbias are built to last. Riders know this; they see the honest old Columbias about and do ing good service year after year. Columbias are also built to look well, as every body knows who ever saw a Columbia. The standard Columbia price of $125 must prove attractive to every intending purchaser of a wheel.

Our catalogue for 1894 shows a line of wheels all newly designed, which for attractiveness excel any bicycle ever offered. It is free at our agencies, or we mail it for two two-cent stamps.

Branch Public Library 409 27 MAY 94

D. Appleton & Co. New Books.

Aerial Navigation.

By J. G. W. FIJNJE VAN SALVERDA, late Administrator of Public Works of the Netherlands. Translated from the Dutch, by GEORGE E. WARING, jr. With Notes concerning some Recent Developments in the Art. Illustrated. 12mo. Cloth, $1.25.

The author states that the important question of aërial navigation has taken on a more and more scientific character, and has enlisted the increasing interest of serious minds; and that among competent experts the opinion is held that a brilliant future is before it. To recent meteorological observations, and numerous investigations as to the movements of birds, are mainly attributed the remarkable advances toward the solution of the problem, detailed accounts of which are comprised in this interesting volume.

A System of Lucid Shorthand.

Devised by WILLIAM GEORGE SPENCER. With a Prefatory Note by HERBERT SPENCER. 12mo. Cloth, 50 cents.

This system, devised by Mr. Herbert Spencer's father, has been in manuscript since 1843. It is now published, as explained by the writer of the Prefatory Note, not because it possesses advantages over existing phonographies for reporting and kindred purposes, but "from the conviction, long since formed and still unshaken, that it ought to replace ordinary writing." It is claimed that, as it possesses the brevity of shorthands in general, and greater legibility, the use of it by men of business, journalists, authors, and people at large would achieve a great economy of life.

Hume.

With Helps to the Study of Berkeley. By THOMAS H. HUXLEY. The sixth volume of the author's Collected Essays. 12mo. Cloth, $1.25.

CONTENTS.—Early Life of Hume: Literary and Political Writings. Later Years: The History of England. The Objec and Scope of Philosophy. The Contents of the Mind. The Origin of the Impressions. The Classification and the Nomenclature of Mental Operations. The Mental Phenomena of Animals. Language—Propositions concerning Necessary Truths. The Order of Nature: Miracles. Theism: Evolution of Theology. The Soul. The Doctrine of Immortality. Volition: Liberty and Necessity. The Principles of Morals.

Bishop Berkeley on the Metaphysics of Sensation. On Sensation, and the Unity of Structure of Sensiferous Organs.

A Short History of the Crusades.

By J. I. MOMBERT, D.D., author of "Charles the Great," etc. With Two Maps. 12mo. 300 pages. Cloth, $1.50.

This work presents to busy people a narrative of the grand drama of the Crusades. It traverses the whole ground, depicting on contemporary authority, and in the light of impartial criticism, the character and motives of the actors, the kernel and worth of their deeds.

A Daughter of To-day.

By Mrs. EVERARD COTES (Sara Jeannette Duncan), author of "A Social Departure," "An American Girl in London," etc. 12mo. Cloth, $1.50.

Few literary *débutantes* have met with the success obtained by Sara Jeannette Duncan's first book, "A Social Departure." Her succeeding books showed the same powers of quick observation and graphic description, the same ability to identify and portray types. Meantime, the author has greatly enlarged her range of experience and knowledge of the world. A true cosmopolite, London, Paris, and Calcutta have become familiar to her, as well as New York and Montreal. The title of her new book indicates an immediately attractive theme, and the author's vigorous treatment of it has given us a book distinguished not only by acute study of character, command of local color, and dramatic force, but also by contemporaneous interest. This novel is Mrs. Cotes's most advanced and most important literary work.

BY THE SAME AUTHOR:

A SOCIAL DEPARTURE: How Orthodocia and I Went Round the World by Ourselves. Illustrated. 12mo, cloth, $1.75.

AN AMERICAN GIRL IN LONDON. Illustrated. 12mo, cloth, $1.50.

THE SIMPLE ADVENTURES OF A MEMSAHIB. Illustrated. 12mo, cloth, $1.50.

A Policy of Free Exchange.

Essays by Various Writers, on the Economical and Social Aspects of Free Exchange and Kindred Subjects. Edited by THOMAS MACKAY, editor of "A Plea for Liberty." 8vo. Cloth, $4.00.

"Taken as a whole, these essays constitute a powerful argument in favor of the doctrine, once very generally admitted, but now often ignored even by lawmakers, that for laborers as well as for all other members of the community, free exchange, and not coercive combination, is the safest rule of guidance."—*New York Journal of Commerce.*

"A series of essays by various writers, on certain controversial subjects, composed in perfect independence, without any prearranged community in design, yet illustrative of one thesis in common. Faith in free trade is the bond of union in the writers."—*London Saturday Review.*

Aphorisms from the Writings of Herbert Spencer.

Selected and arranged by JULIA RAYMOND GINGELL. With Portrait. 12mo. Cloth, $1.00.

"A careful perusal of this work cannot but excite admiration for the great philosopher, and it is one of the best incitements to going further and deeper into his theories by reading his works entire. Each paragraph is a completed thought; all teach us something that we want to know; and the selections show not only appreciation, but great tact. . . . The subjects of education, evolution, science, sociology, politics, justice, liberty, truth, and honesty, sympathy, happiness, self-control, etc., are all represented."—*Detroit Free Press.*

"The aphorisms illustrate the wide range of Herbert Spencer's philosophy, and come near to furnishing a rule of living."—*Philadelphia Inquirer.*

Edward L. Youmans,

Interpreter of Science for the People. A Sketch of his Life, with Selections from his Published Writings, and Extracts from his Correspondence with Spencer, Huxley, Tyndall, and others. By JOHN FISKE. With 2 Portraits. 12mo. Cloth, $2.00.

"It was eminently proper that the biography of Mr. Youmans should be written, and certainly there could not have been chosen a fitter man than Mr. Fiske to write it. An acquaintance dating back thirty years is itself a qualification, and when to this are added Mr. Fiske's ability and the lucid method which characterizes his work, the elements for a satisfactory memoir are all present."—*Philadelphia Bulletin.*

"To enumerate Youmans's achievements in the dissemination and interpretation of scientific truth is to sum up the record of an epoch from the view-point of the gradual enlightenment of the American people. When Mr. Fiske reminds us that the discovery and propagation of truth are functions seldom united in one person, and that science, like religion, must have its apostles, he speaks as one having experience and authority, and no one will dispute his competence to define and applaud the services which his friend rendered in the capacity of a breaker of the bread of science to the multitude."—*New York Sun.*

A History of the United States Navy.

From 1775 to 1894. By EDGAR STANTON MACLAY, A.M. With Technical Revision by Lieut. ROY C. SMITH, U.S.N. In two volumes. Vol. I. With numerous Maps, Diagrams, and Illustrations. 8vo. Cloth. Price, $3.50 per volume. (*Volume II. nearly ready.*)

"There is no doubt that Mr. Maclay's work will receive wide and careful reading. It has been written for the people, and is, consequently, without the technical phraseology of a work meant for the use of the specialist alone."—*Philadelphia Press.*

"It fills a place which has almost escaped the attention of historians. Mr. Maclay's work shows on every page the minute care with which he worked up his theme. His style is precise and clear, and without any pretence of rhetorical embellishment."—*N. Y. Tribune.*

"Mr. Maclay has deservedly won for himself an enviable place among our American historians. . . . His researches have been exhaustive and his inquiries persistent, and he has used his wealth of material with a proper appreciation of historical value."—*Boston Advertiser.*

LASELL SEMINARY FOR YOUNG WOMEN

Suggests to parents seeking a good school, consideration of the following points in its methods:
1st. Its special care of the health of growing girls.
Resident Nurse, supervising work, diet, and exercise; *abundant food* in *good variety* and *well cooked;* early and long sleep; a fine gymnasium, furnished by Dr. Sargent of Harvard; bowling-alley and swimming-bath; no regular or foreknown examinations, etc.
2d. Its broadly planned course of study.
Boston proximity both necessitates and helps to furnish the best of teachers, including many specialists; with one hundred and twenty pupils, a faculty of thirty. Four years' course; *in some things equal to college work; in others planned rather for home and womanly life.* Two studies required, and two to be chosen from a list of eight or ten electives. One preparatory year. Special students admitted if eighteen years old or over, or graduates of High Schools.
3d. Its homelike air and character.
Training in self-government; limited number (many declined every fall for lack of room); personal oversight in habits, manners, care of person, room, etc; comforts noted.
4th. Its handiwork and other unusual departments.
Pioneer school in scientific teaching of Cooking, Millinery, Dress-cutting, Business Law for Women, Home Sanitation, Swimming.
Regular expense for school year, $500.
For illustrated catalogue address (mentioning the *Nation*),
C. C. BRAGDON, Principal.

"Unique in its character and almost unique in value."—*Hartford Times.*

HISTORY FOR READY REFERENCE.

FROM THE BEST HISTORIANS, BIOGRAPHERS, AND SPECIALISTS.

THEIR OWN WORDS IN A

COMPLETE SYSTEM OF HISTORY.

BY J. N. LARNED,

President American Library Association.

IN FIVE IMPERIAL VOLUMES.

THE C. A. NICHOLS CO., PUBLISHERS, SPRINGFIELD, MASS.

What some of the most Eminent Scholars, Educators, Historians, and Journalists of the World say of it:

James B. Angell, LL.D., President of the University of Michigan.

I have examined with some care the first volume of Mr. J. N. Larned's 'History for Ready Reference and Topical Reading.' . . . The most scholarly discrimination is shown in the selection of passages from historical writers. . . . The maps are also worthy of special consideration. *We have reason to be proud that an American scholar has produced this work so invaluable to every student of history, and so indispensable to every library.*

Dr. John Fiske, M.A., Historian:

I have looked over your specimen pages very carefully and am delighted with the work. In your selection of extracts you have shown excellent judgment. I believe it will prove one of the most valuable reference books in existence.

Prof. George B. Adams, Ph.D., Professor of History, Yale University, New Haven, Conn.

I have looked over the first volume with constantly increasing interest. THE PLAN SEEMS TO ME ADMIRABLE and ITS EXECUTION EVEN MORE ADMIRABLE STILL. I am sure the work will be in the highest degree useful and instructive, both in public libraries and for private use.

Prof. Frederick Lutz, A.M., Albion College, Michigan, Formerly of Harvard University, Cambridge, Mass.

HAD I OWNED THIS "HISTORY FOR READY REFERENCE" WHEN I STARTED OUT IN MY EDUCATIONAL LIFE, I SHOULD HAVE SAVED MANY HOURS OF WORRY AND WORK.

W. T. Harris, M.A., Ph.D., LL.D., Commissioner of Education.

Its plan to describe all historical events in the language from eminent historical authors has many obvious advantages. No literary man writes evenly upon all subjects. He composes sometimes at a white heat and makes what may be called literary gems. It is one of the great objects of your History for Reference to select the gems of history, and accordingly each scholar may possess within the compass of the four or five volumes *a large part of the most precious historical treasures.*

H. B. Adams, Ph.D., LL.D., Prof. of History Johns Hopkins University.

The treatment topically of great matters of History, in the words of acknowledged authorities, is for students a vast improvement upon mere hack compilations, which make up the substance of many encyclopædias. The fact that you have not pirated your materials, but have used them with the free consent of the various authors, is a strong point in favor of your work. Your work is likely to be more readable and truly instructive than are the usual dry bones of encyclopedic articles. Your accurate habits of work and verification will give to your compilation a scientific character and recognized value.

F. M. Crunden, Librarian, St. Louis, Mo.

Please consider this institution as a subscriber for the work and send the volumes as soon as they appear.

The prospectus has already been eagerly seized on by a club studying American history, and will be kept in constant service until replaced by installments of the work itself.

H. L. Osgood, Ph.D., Professor of History, Columbia College.

The Originality and Comprehensiveness of the plan, the care with which the selections have been made, the thoroughness which appears throughout, commend the work to my mind.

C. D. Hartranft, D.D., President, Hartford Theological Seminary.

The work projected by Mr. Larned is certainly most helpful. The labor-saving to librarian and student is incalculable.

The historic maps are superior in study and engraving to any hitherto published in our country.

S. B. Griffin, Editor Springfield (Mass.) Republican.

UPON EXAMINATION, THE WORK STRIKES ME MORE FAVORABLY THAN EVER.

Samuel Swett Green, Librarian Worcester, Mass., Public Library.

The work will prove to be OF GREAT VALUE, I am sure, IN THE FAMILY, AND INDISPENSABLE IN LIBRARIES.

W. A. Bardwell, Librarian, Brooklyn, N. Y.

An examination cannot fail to fill one with satisfaction that such a work is to be published. . . . We shall esteem it a very important addition to our reference department.

Prof. Samuel Barr, A.M., Albion College, Albion, Mich.

IT IS A WORK WHOSE VALUE CANNOT BE OVER-ESTIMATED. . . . I CANNOT COMMEND THIS WORK TOO HIGHLY.

W. I. Fletcher, M.A., Librarian, Amherst College.

No one better than a librarian can appreciate the crying need for just such a book as this, in which the inquirer will find, not mere references to authorities, but an actual treatment of the desired subject by just the best "authority."

Hon. J. O. Putnam, Buffalo, N. Y.

I am amazed at the general result of your labor. My first great surprise is that the work is so complete a compendium of the history of states, peoples, and institutions of all historic periods. The grouping of narratives by the most eminent writers is as fascinating as it is novel. As a guide to the more elaborate histories it seems perfect.

Prof. Edward W. Bemis, Ph.D., The University of Chicago, Ill.

IT IS A CAPITAL IDEA THAT YOU HAVE WORKED OUT, and yours is the most interesting encyclopædia that I believe has appeared.

Moses Coit Tyler, M.A., L.H.D., Prof. of History in Cornell University.

I have made experiments in many directions for the purpose of testing its comprehensiveness, its critical value, and its accuracy. It is the simple truth to say that the longer these experiments continued, the greater became my admiration for the ingenuity and simplicity of the plan of this great book, and for the good scholarship and the good literary workmanship that have gone into its execution.

E. A. Grosvenor, M. A., Prof. of History at Smith College.

Yours is a book which no student of history can afford to be without. . . . The maps are not indefinite generalities about some country some time, but are instantaneous historical photographs.

Dr. Albert Shaw, Editor of Review of Reviews, New York.

I have examined with ever increasing satisfaction and delight the specimen pages of your forthcoming "History for Ready Reference." I consider your History one appealing with particular force to every intelligent journalist. It bears the marks of great and patient care in its production. It seems to me there can but be very wide recognition of the almost incomparable usefulness of this book.

President L. R. Fiske, D.D., LL.D., Albion College, Albion, Michigan.

I am greatly impressed with its value. IT SEEMS MORE THAN A KEY TO HISTORY. IT IS AN UNLOCKED TREASURY OF HISTORY. IT IS MORE THAN THIS EVEN. IT IS A SKILFUL GUIDE INTO ALL REALMS AND AGES OF HISTORY.

Williston Walker, Ph.D., Professor of History, Theological Seminary, Hartford, Conn.

It will prove WIDELY USEFUL FOR PUBLIC LIBRARIES, SCHOOLS, COLLEGES, AND INTELLIGENT READERS GENERALLY. I desire also to express my satisfaction with the MAPS which illustrate the text. They ARE A DISTINCT ADVANCE ON ANYTHING HERETOFORE PRODUCED IN HISTORIC GEOGRAPHY ON THIS SIDE OF THE ATLANTIC.

Prof. Robert S. Avann, A.M., Ph.D., Albion College, Albion, Mich.

A MONUMENTAL WORK—A BOON TO LIBRARIANS AND TEACHERS, WHILE THE INTELLIGENT FAMILY IN WHOSE LIBRARY IT SHALL FIND A PLACE IS GREATLY TO BE CONGRATULATED.

A. D. Morse, M.A., Prof. of History, Amherst College.

I like very much the plan. I like, too, the way in which the plan is carried out in the pages of the prospectus. If these are fair specimens, the work must prove to teachers and students of history simply invaluable.

Andrew Stephenson, Ph.D., Professor of History and Jurisprudence, Wesleyan University, Middletown, Conn.

A VERY VALUABLE WORK, I RECOMMEND IT TO ALL LOVERS OF GOOD BOOKS.

Rev. J. Williams, D.D., LL D., Bishop of Connecticut, Middletown, Conn.

IT IS RELIABLE AND UP TO DATE, AND GIVES WHAT AN ORDINARY ENCYCLOPÆDIA DOES NOT.

J. K. Hosmer, Librarian, Minneapolis, Minn.

I am delighted with it and am sure it must have the greatest value as a work of reference. The arrangement makes it easy for the searcher to find his way to the man, the city, the State, or the particular deed which he wishes to find; and the references give him all necessary hints for following up the topic elsewhere. It is a quite extraordinary distillation into a moderate compass of the voluminous annals of mankind.

Ride a Columbia

No possible injury can result from any reasonable amount of riding on a properly constructed bicycle. The theory that cycling was harmful has long since been exploded, and physicians everywhere recommend the wheel to-day as affording the best means of exercise for men and women.

Dr. William S. Stewart, Professor Emeritus, Medico Chirurgical College, Philadelphia, says: "I regard the use of the bicycle as a means of physical culture superior to any other means in use at the present time."

GINN & COMPANY PUBLISH

Four Noteworthy Series of Text-Books.

Home and School Library Series.

A series of Classics for Schools. Choice literature, judicious notes, large type, firm binding, low prices.

Forty-five volumes now ready.

Athenæum Press Series.

Issued under the general editorship of Professor GEORGE LYMAN KITTREDGE of Harvard University and Professor C. T. WINCHESTER of Wesleyan University.

This series is intended primarily for use in colleges and higher schools; but it will furnish also to the general reader a library of the best things in English letters in editions at once popular and scholarly. The works selected will represent, with some degree of completeness, the course of English Literature from Chaucer to our own times.

Five numbers now ready.

Annotated English Classic Series.

A series of the best English Authors. Edited for school use by able English and American educators and writers.

Eighty-eight numbers now ready.

School Series of Latin and Greek Authors.

Under the general editorial supervision of WILLIAM C. COLLAR, Headmaster of the Roxbury Latin School, and JOHN TETLOW, Headmaster of the Girls' High and Latin Schools, Boston.

This series is limited to those Latin and Greek authors deemed most suitable to be read in secondary schools. It will include in small volumes the several books of those authors separately edited by competent scholars of experience as schoolmasters.

Two numbers now ready.

New Books.

FIRST STEPS IN ALGEBRA. By G. A. WENTWORTH, A.M., Author of Wentworth's Series of Mathematics. 12mo. Cloth. 184 pages. Price, by mail, postpaid, 70 cents.

GLIMPSES AT THE PLANT WORLD. By FANNY D. BERGEN. Fully illustrated. 12mo. Cloth. 156 pages. Price, by mail, postpaid, 55 cents.

CONTEMPORARY FRENCH WRITERS. By Mlle. ROSINE MELLE. 12mo. Cloth. 212 pages. Price, by mail, postpaid, 85 cents.

PREPARATORY GERMAN READER. For Beginners. By C. L. VAN DAELL. 12mo. 136 pages. Price, by mail, postpaid 45 cents.

FIRST LESSONS IN CIVIL GOVERNMENT. By JESSE MACY. 12mo. Cloth. 229 pages. Price, by mail, postpaid, 70 cents.

STUDIES IN THE EVOLUTION OF ENGLISH CRITICISM. By LAURA JOHNSON WYLIE. 12mo. Cloth. 212 pages. Price, by mail, postpaid, $1.10.

ELEMENTARY METEOROLOGY. By WILLIAM MORRIS DAVIS, Professor of Physical Geography in Harvard University. 8vo. Cloth. 355 pages. Price, by mail, postpaid, $2.70.

CONCORDANCE OF THE DIVINA COMMEDIA. By EDWARD ALLEN FAY. Large. 8vo. 819 pages. Price, by mail, carriage paid, $10.00.

OLD ENGLISH BALLADS. (Athenæum Press Series.) Selected and Edited by Prof. F. B. GUMMERE of Haverford College. 12mo. Cloth. xcviii+380 pages. Price, by mail, postpaid, $1.35.

Descriptive Circulars of these books sent postpaid to any address. Our Catalogues for 1894 are just out. Sent postpaid to any address.

Ginn & Co., Publishers, Boston, New York, Chicago, London

LONGMANS, GREEN, & CO.'S NEW BOOKS.

A HISTORY OF TRADE UNIONISM.

By SIDNEY and BEATRICE WEBB. 8vo, $5.00. With Map and full Bibliography of the subject.

*** This work, the result of three years' special investigation, describes the growth and development of the Trade Union Movement in the United Kingdom from 1700 down to the present day. Founded almost entirely upon material hitherto unpublished, it is not a mere chronicle of Trade Union organization or record of strikes, but gives, in effect, the political history of the English working class during the last 150 years.

THE ALCHEMICAL ESSENCE AND THE CHEMICAL ELEMENT:

An Episode in the Quest of the Unchanging. By M. M. PATTISON MUIR, Fellow of Gonville and Caius College, Cambridge. 8vo, $1.50.

"The author furnishes a brief and smoothly written exposition of the gradual transition from the romance of alchemy to the romance of chemistry, the former being described as insecurely founded, false, glaring and hard, whilst the second, firmly based and true, constitutes part of the romance of nature itself."—*Pharmaceutical Journal.*

LAW AND THEORY IN CHEMISTRY:

A Companion Book for Students. By DOUGLAS CARNEGIE, sometime Scholar and Demonstrator in Chemistry of Gonville and Caius College, Cambridge. Crown 8vo, $1.50.

PAPERS AND NOTES ON THE GLACIAL GEOLOGY OF GREAT BRITAIN AND IRELAND.

By the late HENRY CARVILL LEWIS, M.A., F.G.S., Professor of Mineralogy in the Academy of Natural Sciences, Philadelphia, and Professor of Geology in Haverford College, U. S. A. Edited from his unpublished MSS. with an Introduction by Henry W. Crosskey, LL.D., F.G.S. 8vo, with 83 Illustrations in the text and 10 Maps. 542 pages, $7.00.

SHAKESPEARE STUDIES, AND OTHER ESSAYS.

By THOMAS SPENCER BAYNES, LL.D., late Professor of Logic, Metaphysics, and English Literature in the University of St. Andrews, and Editor of the Ninth Edition of the "Encyclopædia Britannica." With a Biographical Preface by Professor Lewis Campbell. Crown 8vo, $2.50.

*** The essays republished in this volume consist of three articles which appeared in *Frazer's Magazine*, 1879-80, entitled "What Shakespeare Learned at School," the article on Shakespeare which appears in the "Encyclopædia," and one on "English Dictionaries" which appeared in the *Edinburgh Review* of July, 1868.

New Work by Andrew Lang.

BAN AND ARRIERE BAN:

A Rally of Fugitive Rhymes. With Frontispiece. 12mo, gilt top, $1.50.

THE ELEMENTS OF ENGLISH CONSTITUTIONAL HISTORY FROM THE EARLIEST TIME TO THE PRESENT DAY.

By F. C. MONTAGU, M.A., Professor of History, University College, London, late Fellow of Oriel College, Oxford. 12mo, $1.25.

THE AMATEUR TELESCOPIST'S HANDBOOK.

By FRANK M. GIBSON, Ph.D., LL.B. With Illustrations and Descriptive Catalogue of 468 Celestial Objects. Crown 8vo, $1.25.

CONTENTS: I. The Telescope: Its Principles and Powers—II Testing the Object Glass, Eyepieces, Tubes—III The Stand—IV. Accessories of the Telescope—V. The Care of the Telescope—VI The Use of the Telescope—VII. Observations. Stars, Nebulæ, the Sun and Moon—VIII. Observation Continued, The Planets—IX Prices of Telescopes and their Accessories. CELESTIAL OBJECTS: Alignment Stars—A Descriptive Catalogue of 468 Celestial Objects.

WAYMARKS IN CHURCH HISTORY.

By the Rev. WILLIAM BRIGHT, D.D., Canon of Christ Church and Regius Professor of Ecclesiastical History in the University of Oxford. Crown 8vo, $2.00.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th St., New York.

Nervous

Are you, can't sleep, can't eat, tired, thirsty? Blood poor?
It's a tonic you want—

Hires' Rootbeer.

This sparkling, exhilarating, and refreshing drink, while being far more agreeable in bouquet and flavor than the finest wine or champagne, is at the same time unlike them, being free from alcohol.

A temperance drink for temperance people, delicious and wholesome as well. Purifies the blood, tickles the palate.

Package makes five gallons.
Ask your storekeeper for it.

Take no substitutes.

Send 2-cent stamp to Chas. E. Hires Co., Philadelphia, for beautiful picture cards.

HEALTH AND PROFITABLE OCCUPATION.

How to secure both in a land of sunshine and abundance.

A little book free on application.

The Pecos Irrigation and Improvement Co.,
COLORADO SPRINGS, COLO.

The New Columbia Bicycle Pedal

is sure to attain great popularity as the best all around pedal that will be seen this season.

Combining the lightness of the rat trap racing pedal with the ease and comfort of a rubber pad, it preserves the varied and excellent qualities of our 1893 pattern, and reduces its weight more than one half. It is undoubtedly the lightest, neatest, and handsomest pedal ever attached to a bicycle.

POPE MFG. CO.,
Boston, New York,
Chicago, Hartford.

The beautiful Columbia catalogue can be obtained free at our agencies, or we mail it for two two-cent stamps.

MT. DESERT.

TO LET.—Furnished, including bed linen, etc, for $125 (or $150, including fuel and water from village water-works), a house at Seal Harbor. Has living-room, large dining-room, kitchen, bath, and two chambers. Drains to sea. Best hair mattresses; forty feet above high water; fine view; not overlooked by any other building; fronts west: one minute's walk from boarding-house—two minutes from hotel. S. H. is much frequented by college men; among the season visitors this year will be one professor from Dartmouth, two from Hopkins, and one from Yale. Address W. M. Griswold, Cambridge, Mass.

Siasconset, Nantucket.

TO LET for season, FURNISHED COTTAGE.—Ten rooms, pleasant situation, abundant water supply; sanitary arrangements perfect. Address
18 Graduate Hall,
University of Chicago,
Ill.

Mrs. H. P. LEFEVRE, Principal.
31st year begins September 21, 1893.

MASSACHUSETTS, Auburndale (10 miles from Boston).
LASELL SEMINARY FOR YOUNG WOMEN
Suggests to parents seeking a good school, consideration of the following points in its methods:
1st. Its special care of the health of growing girls.
Resident Nurse, supervising work, diet, and exercise; *abundant food in good variety and well cooked;* early and long sleep; a fine gymnasium, furnished by Dr. Sargent of Harvard; bowling-alley and swimming-bath; no regular or foreknown examinations, etc.
2d. Its broadly planned course of study.
Boston proximity both necessitates and helps to furnish the best of teachers, including many specialists; with one hundred and twenty pupils, a faculty of thirty. Four years' course; *in some things equal to college work; in others planned rather for home and womanly life.* Two studies required, and two to be chosen from a list of eight or ten electives. One preparatory year. Special students admitted if eighteen years old or over, or graduates of High Schools.
3d. Its homelike air and character.
Training in self-government; limited number (many declined every fall for lack of room); personal oversight in habits, manners, care of person, room, etc.; comforts not stinted.
4th. Its handiwork and other unusual departments.
Pioneer school in scientific teaching of Cooking, Millinery, Dress-cutting, Business Law for Women, Home Sanitation, Swimming.
Regular expense for school year, $500.
For illustrated catalogue address (mentioning the *Nation*),
C. C. BRAGDON, Principal.

MASSACHUSETTS, Boston, 593 Boylston Street.
CHAUNCY HALL SCHOOL (65th Year).
For Boys and Girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building on Copley Square is especially attractive, and is very near the Institute.
Preparation also for College (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 66 Marlborough Street
CLASSICAL SCHOOL FOR GIRLS.—Boarding and Day School. College preparation; certificate admits to Smith, Vassar, and Wellesley.

"Seldom have we come upon so satisfactory and charming a book as this . . . To the real lover of Venice . . . we can recommend this book, as being full of that spirit which comes only of long acquaintance and knowledge and sympathy."—*Nation.*

JUST READY. SECOND EDITION.

THE FRIENDSHIP OF NATURE.

A Chronicle of New England Birds and Flowers. By MABEL OSGOOD WRIGHT. 18mo, cloth, gilt top, 75 cents.

*** Also a Large-paper Edition, limited to 250 copies, with twelve full-page plates. Crown 8vo, $3.00 *net.*

Ready June 1: The Fourth Edition of Mrs. Humphry Ward's Popular New Novel.

Marcella.

By Mrs HUMPHRY WARD, author of "The History of David Grieve," "Robert Elsmere," etc., etc. With new Portrait. In two volumes, small 12mo, buckram. In box. Price $2 00.

"Here we have a love story with very extraordinary characters. . . . Mrs. Ward tells her story with fascinating cleverness, nay, with genius, . . . while we hang breathlessly upon the main thread of romance, and pay our tribute to the marvellous fascination of 'Marcella.' . . . 'Marcella' is a novel not to be lightly passed over; it seems to us the greatest that Mrs. Ward has written, viewed as a romance to be read for the interest and pleasure it affords, and easily the greatest written by a woman since the pen fell from George Eliot's hand. . . . Never has pen better pictured English landscape, never has womanly genius more forcibly appealed through elegant description of pathetic scenes, never has a vivid imagination dashed a more fascinating glamour . . . A strong, fascinating, brilliant fiction, to be read for recreation chiefly."—*The Independent.*

"Mrs. Ward has certainly achieved a remarkable success in this third serious novel of modern social and ethical life."—*The Review of Reviews.*

The Sixth Edition of Mr. F. Marion Crawford's New Novel will be ready early in June.

Katharine Lauderdale.

By F. MARION CRAWFORD, author of "Saracinesca," "Pietro Ghisleri," "Mr. Isaacs," etc. With Illustrations and a new Portrait of the Author. In two volumes. Small 12mo, buckram, in box. Price, $2 00.

"'Katharine Lauderdale' is an excellent novel, and the series of which it is the first installment can hardly fail to be of great interest. . . . Mr. Crawford's work has never been finer or more delicate than it is in 'Katharine Lauderdale.' . . . "No masculine novelist has more successfully than he bridged the chasm between masculine and feminine perception, sensation, and sympathy. . . .

"The portrait of the woman, with its delicately truthful modelling, is really richer in variety of fine expression, and it can be returned to again and again with ever fresh interest and delight."—*The Spectator*

"It is the first time, we think, in American fiction, that any such breadth of view has shown itself in the study of our social framework."—*Life.*

JUNE NUMBER NOW READY.

BOOK REVIEWS.

A Monthly Journal devoted to New and Current Publications. Price, 5 cents per number. Yearly subscription, 50 cents.

*** The leading article in this number is a paper by Mr. F. MARION CRAWFORD, entitled "Modern Views of Mysticism" It is hoped that this will be the first of a series of papers which are the result of the most earnest investigation into a phase of life and thought that has always appealed very strongly to Mr. Crawford's imagination.

MACMILLAN & CO., 66 Fifth Avenue, New York.

Charles Scribner's Sons'

NEW IMPORTATIONS.

LETTERS OF FRANZ LISZT.

Edited and Collected by LA MARA. Translated by Constance Bache. With 2 portraits. 2 vols., crown 8vo, $6.00.

This work contains over 650 most interesting letters, addressed by Liszt to well-known persons in society, literature, and art, and reveal in their unvarnished variety the real character of the great and charming artist.

DANTE G. ROSSETTI AND THE PRE-RAPHAELITE MOVEMENT.

Viewed in Relation to the Problems, Tendencies, and Purposes of Modern English Art. By Mrs. J. W. WOOD. With 8 photogravure reproductions of Rossetti's Paintings. 8vo, cloth, $3.00.

The book contains some unpublished reminiscences of Rossetti's student days and career in art, and describes the Founding of the Pre-Raphaelite Brotherhood and its long conflict with academic traditions. Through the courtesy of Lord Battersea, Mr. Theodore Watts, Mr. Moncure D. Conway, and others, several important drawings and studies are reproduced for the first time, and they appear in the book as full-page photogravure illustrations.

THE BINDING OF BOOKS.

Ready Saturday, June 2d.

Socialism and Social Reform.

By PROF. RICHARD T. ELY, LL.D.

The ablest discussion of this subject that has yet appeared. Dr. Ely is fair-minded and candid enough to recognize the saving principles of the system, and yet fearlessly points out its dangers and defects.

The volume will be a notable addition to Socialistic bibliography.

12mo. $1 50.

Ready at all the Bookstores Saturday, June 2.

T. Y. CROWELL & CO.,
NEW YORK AND BOSTON.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

In regular book form, ready for use by any bookbinder who will put in the numbers for a small charge. These, have black cloth sides, morocco back and corners, and are stamped in gold on back, THE NATION. Price 75 cents each, postpaid.

These covers will fit all volumes from XXXIII. to LVI., *i, e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) Address

THE NATION, BOX 794, New York.

History of Dartmouth College

AND THE TOWN OF HANOVER, N. H., by FREDERICK CHASE. Vol. I. To the outbreak of the college controversy. Large 8vo, cloth, $3.50 net; postage 24 cents. Sent on receipt of price by
JOHN K. LORD, Hanover, N. H.

The Columbia Band Brake

which made a great popular success last season is the only perfect working hub brake ever invented, and is again attached to our full roadster models 35 and 36. It makes cycling safe, because it holds on any grade, is quickly applied, and throws off readily. Its connection is out of the way, takes up no room, and makes no increase in weight.

Cass Realty Corporation.

Incorporated under the laws of the State of New York.

Capital invested only in productive real estate in the city of New York.

This Corporation is organized for the purpose of providing a safe and profitable method of investing money for persons of limited means, and it is believed that no safer or better way can be found than in the purchase and holding of well-located and productive real estate in the city of New York.

The Capital Stock is divided into Common and Preferred shares of the par value of one hundred dollars each.

The Preferred shares are entitled to dividends at the rate of five per centum per annum, payable quarterly, and to a preference for principal.

The investor has the advantage of knowing that the property of the Corporation is always in sight and can be readily located and inspected, that its value is permanent and easily ascertained, that the income is certain.

For people who seek safety and permanence, together with a moderate return, this investment recommends itself.

Common and Preferred shares are now offered at the par value of ONE HUNDRED DOLLARS each, in large or small amounts. Payments may be made in installments.

Application must be made to

Cass Realty Corporation

MACMILLAN & CO.'S NEW BOOKS.

JUST READY. NEW AND CHEAPER EDITION.

"A GREAT BOOK," BY A NEW AUTHOR.

SOCIAL EVOLUTION.

By BENJAMIN KIDD. 8vo, $1.75.

"It is a study of the whole development of humanity in a new light, and it is sustained and strong and vigorous throughout . . . It is a profound work, which invites the attention of our ablest minds, and which will reward those who give it their careful and best thought . . . Undoubtedly the ablest book on social evolution that has been published for a long time."—*Boston Herald.*

"Whatever fault may be found with some of Mr. Kidd's theories, there can be no question as to the signal ability with which he argues them out, and it is quite possible to profit by the constant suggestiveness of his style of treating the subject, even while we refuse to accept his particular conclusions. . . . The book itself is deeply interesting from first to last."—*Glasgow Herald.*

"There is scarcely a page in Mr. Kidd's book which is not full of suggestion regarding the social problem of our time, and it is not a little comforting in the battle and turmoil, the running hither and thither of theage when we 'scarce possess our souls before we die,' to find a writer who calmly applies the most recent doctrines of science to modern society and life, and who is yet able to say that the future is hopeful and the prospect fair."—*Observer.*

"Altogether this is one of the most suggestive and inspiring books which have ever dealt with problems of the imminent future."—*Daily Telegraph.*

"This notable contribution to the science of social life."—*The Outlook.*

NEARLY READY.

THE WINGS OF ICARUS.

Being the Life of one Emilia Fletcher, as revealed by Herself in (I.) Thirty-five Letters written to Constance Norris between July 18, 188–, and March 26th of the following year; (II.) A Fragmentary Journal; (III.) A Postscript. By LAURENCE ALMA TADEMA. 18mo, cloth, gilt top. Price, $1.25.

Life on the Lagoons.

By HORATIO F. BROWN, author of "Venice: an Historical Sketch of the Republic." Second Edition, revised. With Illustrations. Crown 8vo, cloth. Price, $1.75.

"Seldom have we come upon so satisfactory and charming a book as this . . . To the real lover of Venice . . . we can recommend this book, as being full of that spirit which comes only of long acquaintance and knowledge and sympathy."—*Nation.*

To be Published early in June. A New Work by John Ruskin.

Verona, and Other Lectures.

Delivered principally at the Royal and London Institutions between 1870 and 1883. Illustrated with Frontispiece in color, and 11 Photogravure Plates from drawings by the author. Medium 8vo, cloth. Price, $2.50.

This volume consists of five chapters, four of which were prepared by the author to be delivered as lectures during his tenure of the Slade Professorship at Oxford, and one has been written since his resignation.

"An exceedingly dainty and enticing edition."—*Congregationalist.*

THE TEMPLE SHAKESPEARE.

NEW VOLUMES.

JUNE NUMBER NOW READY.

BOOK REVIEWS.

A Monthly Journal devoted to New and Current Publications. Price, 5 cents per number. Yearly subscription, 50 cents.

*** The leading article in this number is a paper by Mr. F. MARION CRAWFORD, entitled "Modern Views of Mysticism." It is hoped that this will be the first of a series of papers which are the result of the most earnest investigation into a phase of life and thought that has always appealed very strongly to Mr. Crawford's imagination.

AN INSTRUCTOR IN CLASSICS IN an Eastern University, Ph.D. of Johns Hopkins, will give a part of the summer to tutoring in preparation for college. Address G., care *Nation*.

GINN & COMPANY'S NEW BOOKS.

New Anabasis.

First Four Books, with an Illustrated Vocabulary. Revised by Professor W. W. GOODWIN, author of Goodwin's Greek Grammar, and Professor JOHN W. WHITE, author of Greek Lessons, The Beginner's Greek Book, etc. 12mo. Half leather. With Map and Illustrations. For introduction, $1.50.

In this new edition the Greek text has been thoroughly revised, and is newly printed in large Porson pica.

There is an introduction of 43 pages, which contains the information about history and antiquities which is needed for an understanding of the Anabasis. The notes have been thoroughly revised. The well-known Dictionary to the whole Anabasis, prepared by Professors White and Morgan, is an integral part of the present edition.

The book is thus made up by the collaboration of three eminent scholars and specialists, and can be most confidently recommended as able and thorough in scholarship, skilful in adaptation to the end in view, and free from all features that are merely "taking" and without real value.

Studies in the Evolution of English Criticism.

By LAURA J. WYLIE. 12mo. Cloth. 212 pages. Price, by mail, postpaid, $1.10.

Elementary Meteorology.

By WILLIAM M. DAVIS of Harvard University. 8vo. Cloth. 355 pages. Price, by mail, postpaid, $2.70.

18 Graduate Hall, University of Chicago, Ill.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Book Cover Designs

A COMPETITION.

Three Prizes: $50, $40, $25.

The recent exhibition of modern commercial bookbindings at the Grolier Club has drawn attention to the fact that the cloth book-cover has become an important detail in the manufacture of books. A number of artists now employ almost all their time in making cover designs, yet the demand is said to exceed the supply. Messrs. Charles Scribner's Sons, through THE BOOK BUYER, announce a competition in such designs, open to all until August 1.

The prizes offered are $50, $40, and $25 for the best three designs for covers, to be submitted to the editor of THE BOOK BUYER. Designs are asked for a novel, a book of poems, and a juvenile, and must show the color scheme. The full terms of the competition are printed in the June number of THE BOOK BUYER.

The June BOOK BUYER *will be sent to any address on receipt of Ten Cents.*

CHARLES SCRIBNER'S SONS,
PUBLISHERS,
153-157 Fifth Avenue, New York City.

William Lloyd Garrison,

1805–1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (till recently published by the Century Company), has been reduced in price from $12.00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of modern historical biography . . . To call the work a mine of information would be to convey a false impression: it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

*** *For sale by booksellers. Sent, postpaid, on receipt of price by the Publishers,*

THE JOURNAL CO., Pubs., St. Thomas, Ont.

CASS REALTY CORPORATION.

Incorporated under the laws of the State of New York.

Capital invested only in productive real estate in the city of New York.

This Corporation is organized for the purpose of providing a safe and profitable method of investing money for persons of limited means, and it is believed that no safer or better way can be found than in the purchase and holding of well-located and productive real estate in the city of New York.

The Capital Stock is divided into Common and Preferred shares of the par value of one hundred dollars each.

The Preferred shares are entitled to dividends at the rate of five per centum per annum, payable quarterly, and to a preference for principal.

The investor has the advantage of knowing that the property of the Corporation is always in sight and can be readily located and inspected, that its value is permanent and easily ascertained, that the income is certain.

For people who seek safety and permanence, together with a moderate return, this investment recommends itself.

Common and Preferred shares are now offered at the par value of ONE HUNDRED DOLLARS each, in large or small amounts. Payments may be made in installments.

Application must be made to

MASSACHUSETTS, Auburndale (10 miles from Boston).
LASELL SEMINARY FOR YOUNG WOMEN
Suggests to parents seeking a good school, consideration of the following points in its methods:
1st. Its special care of the health of growing girls.
Resident Nurse, supervising work, diet, and exercise; *abundant food* in *good variety* and *well cooked;* early and long sleep; a fine gymnasium, furnished by Dr. Sargent of Harvard; bowling-alley and swimming-bath; no regular or foreknown examinations, etc.
2d. Its broadly planned course of study.
Boston proximity both necessitates and helps to furnish the best of teachers, including many specialists; with one hundred and twenty pupils, a faculty of thirty. Four years' course; *in some things equal to college work; in others planned rather for home and womanly life.* Two studies required, and two to be chosen from a list of eight or ten electives. One preparatory year. Special students admitted if eighteen years old or over, or graduates of High Schools.
3d. Its homelike air and character.
Training in self-government; limited number (many declined every fall for lack of room); personal oversight in habits, manners, care of person, room, etc.; comforts not stinted.
4th. Its handiwork and other unusual departments.
Pioneer school in scientific teaching of Cooking, Millinery, Dress-cutting, Business Law for Women, Home Sanitation, Swimming.
Regular expense for school year, $500.
For illustrated catalogue address (mentioning the *Nation*),
C. C. BRAGDON, Principal.

MACMILLAN & CO.'S NEW BOOKS.

PUBLISHED FOR THE COLUMBIA UNIVERSITY PRESS. NOW READY.

CLASSICAL STUDIES

IN HONOUR OF HENRY DRISLER.

With Portrait and Plates, and other Illustrations. 8vo, cloth. Price $4.00, *net.*

To complete the term of fifty years of official connection with an institution of learning is a fortune which rarely falls to the lot of a professor. Such a term will be concluded by Professor Henry Drisler in June, 1894, and as so interesting an event should be celebrated in a manner befitting the dignities and honours which have been his, it has seemed to some of his former pupils that this could best be done on their part by dedicating to him a volume containing contributions of their own upon subjects relating to antiquity within whose limits he had won so much distinction. Early last year a committee was formed, consisting of Professors Merriam, Peck, and Jackson, and a circular was issued to such graduates of Columbia as had devoted themselves to work in this field. The response will be seen in the list of subjects below.

The titles of the contributions are as follows:

Notes on Horace: Prof. Sidney G. Ashmore, Union College.
Anaximander on the Prolongation of Infancy in Man. A Note on the History of the Theory of Evolution: Dr. N. M. Butler, Columbia.
Of Two Passages in Euripides' Medea: Dr. M. L. Earle, Barnard.
The Preliminary Military Service of the Equestrian Cursus Honorum: Dr. J. C. Egbert, Columbia.
References to Zoroaster in Syriac and Arabic Literature: Prof. Richard Gottheil, Columbia.
Literary Frauds among the Greeks: Prof. Alfred Gudeman, University of Pa.
Henotheism in the Rig-Veda: Prof. E. W. Hopkins, Bryn Mawr College.
On Plato and the Attic Comedy: Prof. George B. Hussey, University of Neb.
Herodotus vii. 61, or Ancient Persian Armour: Prof. A. V. W. Jackson, Columbia.
Archaism in Aulus Gellius: Dr. Charles Knapp, Barnard.
On Certain Parallelisms between the Ancient and the Modern Drama: Prof. Brander Matthews, Columbia.
Ovid's Use of Colour and Colour Terms: Dr. N. G. McRea, Columbia.
(1) A Bronze of Polyclitan Affinities in the Metropolitan Museum; (2) Geryon in Cyprus; (3) Hercules, Hydra, and Crab: Prof. A. C. Merriam, Columbia.
Onomatopoetic Words in Latin: Prof. H. T. Peck, Columbia.
Notes on the Vedic Deity Pūshan: Prof. E. D. Perry, Columbia.
The So-called Medusa Ludovisi: Dr. J. Sachs, Collegiate Institute, N. Y.
Aristotle and the Arabs: Prof. Wm. M. Sloane, Princeton.
Iphigenia in Greek and French Tragedy: Dr. B. D. Woodward, Columbia.
Gargettus, an Attic Deme: Dr. C. H. Young, Columbia.

Just Published.

MACMILLAN & CO., 66 Fifth Avenue, New York.

CASS REALTY CORPORATION.

Incorporated under the laws of the State of New York.

Capital invested only in productive real estate in the city of New York.

This Corporation is organized for the purpose of providing a safe and profitable method of investing money for persons of limited means, and it is believed that no safer or better way can be found than in the purchase and holding of well-located and productive real estate in the city of New York.

The Capital Stock is divided into Common and Preferred shares of the par value of one hundred dollars each.

The Preferred shares are entitled to dividends at the rate of five per centum per annum, payable quarterly, and to a preference for principal.

The investor has the advantage of knowing that the property of the Corporation is always in sight and can be readily located and inspected, that its value is permanent and easily ascertained, that the income is certain.

For people who seek safety and permanence, together with a moderate return, this investment recommends itself.

Common and Preferred shares are now offered at the par value of ONE HUNDRED DOLLARS each, in large or small amounts. Payments may be made in installments.

Application must be made to

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

NOW READY.

Life of St. Francis of Assisi.

By PAUL SABATIER.

Translated from the French by Louise Seymour Houghton. 8vo. $2.50.

No work of recent years has created a greater stir in literary and religious circles than Paul Sabatier's masterly work. The interest aroused has been widespread and sincere; prominent reviewers on the Continent and in England pronouncing it a biography of the very first rank in historical and literary value. It has passed rapidly through numerous French editions, and is now, in answer to an eager demand, issued in an English edition for American readers.

FROM ALPHONSE DAUDET.

"For long, very long, nothing has moved me so deeply as this lofty and simple story."

THE LONDON EXPOSITOR.

"A book which can hardly fail to be monumental. It may stand on the same shelf with Villari's 'Life of Savonarola.'"

N. Y. EXAMINER.

"M. Sabatier has sought to present Francis as he actually was, emphasizing the human side of his character. He has succeeded admirably; better, we think, than any of his predecessors"

THE LONDON SAT. REVIEW.

"We have seldom seen so masterly and careful a criticism. It is a remarkable and excellent book; nor, great as is the progress which the French historical school has recently made, have we seen a better example of it."

*** *Sold by all booksellers, or sent, postpaid, by*

"Eight altogether delightful stories. Whoever misses them will miss a treat such as is rarely offered. The volume is one of those rough-edged, clear-printed masterpieces which delight the book lover and yet is cheap enough to be in anybody's reach."—*Memphis Commercial.*

"Certain to captivate every one who is not only a book-lover, but a lover of books."—*Milwaukee Sentinel.*

"Exquisitely put up."—*Chicago Herald.*

"The stories are capital."—*Boston Advertiser.*

"The most polished lot of little stories given to the public by any author in this year."—*Cincinnati Commercial Gazette.*

"American subjects from a peculiarly American point of view and written in a brisk and telling way."—*New York Times.*

THE ROBB'S ISLAND WRECK AND OTHER STORIES.

BY LYNN R. MEEKINS.

"Characteristic, strong, and good, besides being excellently told. . . . It is a human story of great virility."—*Chicago Herald.*

"There is a touch of art in its picture of summer and winter life."—*New York Times.*

"The tale is finely told."—*Baltimore Herald.*

TWO BOOMS.

"The comic element in these booms has been very amusingly handled."—*Baltimore Sun.*

"A hilariously humorous story."—*New York Commercial Advertiser.*

IN THE EARLY CHRISTMAS MORNING.

"The reader while admiring the literary skill of the author is always sure of a hearty laugh."—*Baltimore News.*

THE COLONEL'S CALL.

"Worthy of being used as a political tract by those who are working for the overthrow of the Tammany ring."—*New York Mail and Express.*

THE NOMINATION. THE ELECTION. THE OPENING GUN. A NEW DEAL.

"Sketches which show up the present methods in politics with a crisper, firmer, and altogether more telling touch than anything encountered of late."—*Milwaukee Sentinel.*

"Incidents in the life of a community which the people of any part of the United States may appreciate."—*Indianapolis News.*

"The series of political sketches in this book is of the first class."—*Chicago Journal.*

"They illustrate with keen judgment of character, abounding humor transfused with a spirit of laughing satire and much picturesque felicity of expression the methods of political bossism in country places."—*New York Commercial Advertiser.*

"Mr. Meekins has succeeded where it is very difficult to be successful. He enters a field comparatively new. . . . It is American life throughout."—*Baltimore Sun.*

"Clear terse English and a charm which will make the work popular everywhere. His dialogue is refreshing, the characters are pure, and the book will find a lasting place with every reader of good works."—*Cincinnati Commercial Gazette.*

"He has keen powers of observation, a well developed sense of humor and the faculty to describe plainly what he sees."—*New York Times.*

"It is a genuine pleasure to commend both in style and substance a work so worthy of perusal as this."—*Philadelphia Press.*

"There is so much of life and sparkle and good will to everybody in Mr. Meekins's characters that his stories fill one with mild enthusiasm."—*Brooklyn Standard Union.*

"It is a book that will be read in many a home, and from its perusal broader views of human characters and human needs will be gained, for its stories are of real life."—*Los Angeles Times.*

STONE & KIMBALL,

CHICAGO AND CAMBRIDGE.

It may be ordered through any bookseller or news dealer. Cloth, $1.

The Snake Ceremonials at Walpi.

Vol. IV. of the Journal of American Ethnology and Archæology. By J. WALTER FEWKES, assisted by A. M. STEPHEN and J. G. OWENS. With Illustrations (some in color) by JULIAN SCOTT and others. 8vo, paper, $2.00, *net;* boards, $2.50, *net.*

In this volume Dr. Fewkes and his assistants give a full and minute account of one of the most important ceremonies of the Hopi Indians, namely, the Snake Dance. It includes observations in 1891, confirmed by further observations under very favorable conditions in 1893, and is at once very curious and entirely trustworthy. It is hardly probable that this peculiar ceremony will much longer continue, and it is specially fortunate that Dr. Fewkes has so fully described it.

Sold by all booksellers. Sent postpaid by

HOUGHTON, MIFFLIN & CO., Boston.

NEW YORK AND LONDON,

HAVE NOW READY:

The Empire of the Tsars and the Russians.

By ANATOLE LEROY-BEAULIEU. Translated with Annotations from the third French edition by Z. A. Ragozin.

Part II. THE INSTITUTIONS.

8vo, cloth, $3.00. Also a fresh supply of

Part I. THE COUNTRY AND ITS INHABITANTS.

8vo, with Maps printed in colors, $3.00.

"This work contains some of the best informed, most strikingly written, most wisely sympathetic discussion, as well as soundest critical judgments of Russia and her people that we have seen."—*New York Times.*

Oliver Cromwell. A History.

Comprising a Narrative of his Life, with Extracts from his Letters and Speeches, and an Account of the Political, Religious, and Military Affairs of England during his Time. By SAMUEL HARDEN CHURCH. With portrait and plans of Marston Moor and Naseby. 8vo, $3.00.

Maximilian and Carlotta.

A Story of Imperialism. By JOHN M. TAYLOR. Illustrated. 12mo, $1.50.

Newton Booth of California.

His Speeches and Addresses. Edited, with Introduction and Notes, by LAUREN C. CRANE. 8vo, with portrait, $2.50.

Tennyson:

His Art and Relation to Modern Life. By STOPFORD A. BROOKE, M.A. 12mo, $2.00.

"The best single volume that has yet been written about the late Laureate of England. . . . Mr. Brooke's mental vision detects qualities in the work of Tennyson which had escaped the notice of most contemporary critics—limitations in his sympathies and defects in his art. . . . His sagacity and his insight make his scanty blame as authoritative as his heartiest praise."—*R. H. Stoddard, in the Mail and Express.*

Red Cap and Blue Jacket.

A Tale of the Time of the French Revolution. By GEORGE DUNN. American Copyright Edition. 16mo, cloth, $1.00.

"Not many novels of recent times contain more original characters They are as real and original as if they had been created by Scott . . . The great merit of the book is its humor, which is rich and good and real, and not artificial. It is never more effective than in the Luxembourg, under the shadow of the guillotine, with the tumbril making its horrid rounds. We make no attempt to tell the story. The author must be left to do that in his own way, which is all his own."—*The Scotsman (England).*

LONGMANS, GREEN, & CO.'S NEW BOOKS.

MICRO-ORGANISMS IN WATER:

Their Significance, Identification, and Removal. Together with an Account of the Bacteriological Methods involved in their Investigation. Specially designed for the Use of those connected with the Sanitary Aspects of Water Supply. By Percy Frankland, Ph.D., B.Sc. (Lond.), F.R.S., and Mrs. Percy Frankland. With 2 Plates and 28 Illustrations in the text. Demy 8vo, 544 pages, $5 00.

A HISTORY OF TRADE UNIONISM.

By Sidney and Beatrice Webb. 8vo, $5.00. With Map and full Bibliography of the subject.

*** This work, the result of three years' special investigation, describes the growth and development of the Trade Union Movement in the United Kingdom from 1700 down to the present day. Founded almost entirely upon material hitherto unpublished, it is not a mere chronicle of Trade Union organization or record of strikes, but gives, in effect, the political history of the English working class during the last 150 years.

CHRISTOPHER COLUMBUS,

And the Participation of the Jews in the Spanish and Portuguese Discoveries. By Dr. M. Kayserling. Translated from the Author's Manuscript, with his Sanction and Revision, by Charles Gross, Ph.D., Assistant Professor of History of Harvard College. Crown 8vo, cloth, $1.25.

"Fairly teems with new discoveries of facts in the history of the Jews of Spain and Portugal, and their participation in the work of the discoverers of those nations. Even statements that have been made before, bearing on the same subject, obtain entirely new force and importance in this work, fortified as they are in each case by citations of original authorities, not to mention the fact that they are made by a man who is justly regarded as one of the foremost living Jewish historians. Is admirably translated. Dr. Kayserling's profound scholarship, historical acumen, conscientious love of accuracy and truth, and vigorous style are well known to all students of Jewish literature. The present work forms a valuable addition to Jewish history, to Spanish history, and to the history of American discovery, and no library devoted to either of these subjects can afford to be without it."—*American Hebrew.*

THE LIFE OF JOHN CHURCHILL, DUKE OF MARLBOROUGH,

To the Accession of Queen Anne. By Gen. Viscount Wolseley. 2 vols., demy 8vo, with 10 Plates (8 Portraits), 11 Plans, and Illustrations and Index, $10.00.

"This remarkable book—remarkable alike for its subject, its author, and their very felicitous association—will be eagerly sought by a multitude of readers. It cannot but add greatly to the literary reputation of Lord Wolseley. It has been known for some time that the victor of Tel-el-Kebir was engaged on an exhaustive study of the life and character of the victor of Blenheim, and expectation has in consequence been keen alike in the world of letters and in the world of arms. That expectation will not be disappointed. No previous biographer has devoted so much pains and study as Lord Wolseley has done to the elucidation of Marlborough's career, and we trace the pen of an accomplished soldier in nearly every page of these volumes The military chapters, in particular those dealing with the battle of Sedgemoor and with Marlborough's brief but brilliant campaign in Ireland, are models of vivid narration, and wherever the pen of the soldier is allowed free scope its performances are admirable."—*Times, London.*

THE AMATEUR TELESCOPIST'S HANDBOOK.

By Frank M. Gibson, Ph.D., LL.B. With Illustrations and Descriptive Catalogue of 468 Celestial Objects. Crown 8vo, $1.25.

"This book will be of real service to the amateur who has had little experience with the telescope."—*Popular Astronomy.*

Edna Lyall's New Novel.

DOREEN.

The Story of a Singer. By Edna Lyall, author of "We Two," "Donovan," "The Autobiography of a Slander," etc., etc. Crown 8vo, buckram cloth, ornamental, 512 pages, $1.50.

"Edna Lyall's . . . new story . . . is one of her best. It has, naturally, enough of tragedy to make it intensely interesting without being sensational in any offensive sense The heroine, Doreen, is a delightful character, sturdy, strong, lovable, womanly, and genuinely Irish. Miss Bayly is a conscientious writer, imbued with deep feeling, a high purpose, and her style is attractive and pure."—*Boston Daily Advertiser.*

NEW PUBLICATIONS.

Life of St. Francis of Assisi.

By PAUL SABATIER.

Translated from the French by Louise Seymour Houghton. 8vo. $2.50.

No work of recent years has created a greater stir in literary and religious circles than Paul Sabatier's masterly work. The interest aroused has been widespread and sincere; prominent reviewers on the Continent and in England pronouncing it a biography of the very first rank in historical and literary value. It has passed rapidly through numerous French editions, and is now, in answer to an eager demand, issued in an English edition for American readers.

FROM ALPHONSE DAUDET.

"For long, very long, nothing has moved me so deeply as this lofty and simple story."

THE LONDON EXPOSITOR.

"A book which can hardly fail to be monumental. It may stand on the same shelf with Villari's 'Life of Savonarola.'"

N. Y. EXAMINER.

"M. Sabatier has sought to present Francis as he actually was, emphasizing the human side of his character. He has succeeded admirably; better, we think, than any of his predecessors"

THE LONDON SAT. REVIEW.

"We have seldom seen so masterly and careful a criticism. It is a remarkable and excellent book; nor, great as is the progress which the French historical school has recently made, have we seen a better example of it."

New Fiction
IN ATTRACTIVE UNIFORM BINDING.

A Pound of Cure.

A Story of Monte Carlo. By W. H. BISHOP. 12mo, $1.00.

A striking novel of life at Monte Carlo. It embodies a curious picture of the growth of the gambling spirit upon a young married man, whose only fault is his weakness in the presence of alluring pleasure. In addition to the very remarkable plot, the book is noteworthy for the delicate and picturesque descriptions of the scenery around Monte Carlo.

"A capital study of a man possessed by the fever of gambling."—*Boston Traveller.*

"A powerful story."—*Pittsburgh Bulletin.*

Tales of the Maine Coast.

By NOAH BROOKS. 12mo, $1.00.

The setting of these short stories is mainly in and around the ancient town of Castine, Maine, the birthplace and present home of the author. In addition to their romantic interest, they possess value as true sketches of the people of the Maine coast, revealing interesting types of character, and full of local color.

Salem Kittredge,

And Other Stories. By BLISS PERRY, author of "The Broughton House." 12mo, $1.00.

"'Salem Kittredge' is one of the best short stories we have read recently There are eight other stories in the volume, all good."—*Boston Advertiser.*

CASS REALTY CORPORATION.

Incorporated under the laws of the State of New York.

Capital invested only in productive real estate in the city of New York.

This Corporation is organized for the purpose of providing a safe and profitable method of investing money for persons of limited means, and it is believed that no safer or better way can be found than in the purchase and holding of well-located and productive real estate in the city of New York.

The Capital Stock is divided into Common and Preferred shares of the par value of one hundred dollars each.

The Preferred shares are entitled to dividends at the rate of five per centum per annum, payable quarterly, and to a preference for principal.

The investor has the advantage of knowing that the property of the Corporation is always in sight and can be readily located and inspected, that its value is permanent and easily ascertained, that the income is certain.

For people who seek safety and permanence, together with a moderate return, this investment recommends itself.

Common and Preferred shares are now offered at the par value of ONE HUNDRED DOLLARS each, in large or small amounts. Payments may be made in installments.

Application must be made to

VOL. LVIII—NO. 1513. THURSDAY, JUNE 28, 1894. PRICE 10 CENTS.

D. Appleton & Co.'s New Books.

Memoirs Illustrating the History of Napoleon I.,

From 1802 to 1815. By BARON CLAUDE-FRANÇOIS DE MÉNEVAL, Private Secretary to Napoleon. Edited by his Grandson, BARON NAPOLEON JOSEPH DE MÉNEVAL. With portraits and Autograph Letters. In three volumes. 8vo. Cloth, $2.00 per volume. Volume I. now ready.

These volumes furnish a picture of Napoleon's daily life which is believed to be unexcelled in point of closeness of observation and graphic detail by any other narrative. That Méneval was not the man to neglect his opportunities is shown abundantly by the glimpses of character r vealed in his diaries and notes. Yet, for personal and other reasons, his invaluable recollections were not given to the world. They have been treasured by his family until the present time of profound interest in Napoleonic history. Of Napoleon's relations with Josephine and Marie Louise—of all the features of his domestic and social existence—Méneval had abundant knowledge, for he shared Napoleon's private life; and since he was sitting at the fountain-head of information, he is able to shed new light on many features of the Napoleonic campaigns. His narrative is most interesting; its historical importance need not be emphasized.

Climbing in the Himalayas.

By WILLIAM MARTIN CONWAY, M.A., F.R.G.S., Vice-President of the Alpine Club; formerly Professor of Art in University College, Liverpool. With 300 Illustrations, by A. D. MCCORMICK, and a Map. 8vo. Cloth, $10.00.

This work contains a minute record of one of the most important and thrilling geographical enterprises of the century—an expedition made in 1892, under the auspices of the Royal Geographical Society, the Royal Society, the British Association, and the Government of India. It included an exploration of the glaciers at the head of the Bagrot Valley and the great peaks in the neighborhood of Rakipushi (25,500 feet); an expedition to Hispar, at the foot of the longest glacier in the world outside the polar regions; the first definitely recorded passage of the Hispar Pass, the longest known pass in the world; and the ascent of Pioneer Peak (about 23,000 feet), the highest ascent yet authentically made. No better man could have been chosen for this important expedition than Mr. Conway, who has spent over twenty years in mountaineering work in the Alps. Already the author of nine published books, he has recorded his discoveries in this volume in the clear, incisive, and thrilling language of an expert.

Classical Dictionary

OF GREEK AND ROMAN BIOGRAPHY, MYTHOLOGY, AND GEOGRAPHY. Based on the Larger Dictionaries, by the late Sir WILLIAM Smith, D.C.L., LL.D. Revised throughout, and in part rewritten, by G. E. MARINDIN, M.A., formerly Fellow of King's College, Cambridge. With numerous Maps and Illustrations. 1019 pages. 8vo. Half morocco, $6.00.

The design of this revised edition is much the same as that of the older work. Since the publication of the latter so much additional knowledge has been acquired in most branches of classical study that it has been found necessary to practically rewrite many of the articles. Sir William Smith constantly directed the revision up to the time of his death, his supervision extending over all but the last part of the book.

The Claims of Christianity.

By WILLIAM SAMUEL LILLY, Honorary Fellow of Peterhouse, Cambridge; author of "The Great Enigma," etc. 8vo. Cloth, $3.50.

The author takes what might be termed the publicist's point of view, and deals with Christianity as a fact in the world's history. He discusses the claims of Buddhism and Islam, and after a masterly analysis of the development of Christianity and the Church, he maintains the necessity of organized spiritual power to vindicate the rights of conscience, especially in our age, when the tendency is to strengthen the state against the individual. Mr. Lilly's historical analysis and incisive discussion of the vital questions of the day form a most timely and suggestive volume.

Man's Place in Nature.

By THOMAS H. HUXLEY. The seventh volume of the author's Collected Essays. 12mo. Cloth, $1.25.

CONTENTS.—On the Natural History of the Manlike Apes. On the Relations of Man to the Lower Animals. On some Fossil Remains of Man. On the Methods and Results of Ethnology. On some Fixed Points in British Ethnology. On the Aryan Question.

General Washington.

By General BRADLEY T. JOHNSON. A new volume in the Great Commanders Series, edited by Gen. JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

A Virginian, appreciating the history and spirit of his State, the author has approached the career of the greatest of Virginians with a comprehension of his hero's personality which has been denied to some who have been unfamiliar with the latter's environments. He deals with Washington as a soldier, but his sympathetic attitude renders it easier to understand Washington the man. On the military side General Johnson will be found a most competent biographer and well-equipped critic, and his presentation of this phase of Washington's career will be fresh in some respects, and of constant value.

Creatures of Other Days.

By Rev. H. N. HUTCHINSON, B.A., F.G.S., author of "The Autobiography of the Earth," "Extinct Monsters," etc. With numerous Illustrations. 8vo. Cloth, $3.00.

". . . The disjointed and often fragmentary bones by which these animals are usually represented in museums convey no ideas whatever to the majority of those who see them. It is quite otherwise with such representations as the figures of this work; and if in some cases the idea conveyed may not be strictly correct, it offers a fair approximation, and at all events gives a vivid conception of some remarkable creature which in its main outlines cannot be far from the actual reality."—*From the Preface, by Sir W. H. Flower F. R.S.*

Cleopatra.

A ROMANCE. By GEORG EBERS, author of "Uarda," "An Egyptian Princess," etc. In two volumes. 16mo. Cloth, $1.50; paper, 80 cents.

In "Cleopatra" Dr. Ebers offers to the public one of the most important of his historical romances. The subject is one which has engaged his attention for many years, and his treatment is characterized by an enthusiasm, as well as a mastery of historical coloring, which will place "Cleopatra" among his most popular works.

The Psychic Factor.

AN OUTLINE OF PSYCHOLOGY. By CHARLES VAN NORDEN, D.D., LL.D., Late President of Elmira College. 12mo. Cloth, $1.25.

This, the latest treatise on a subject that is now engaging the attention of all educators and philosophers, is a most admirable summing up of the extended discussions and investigations that have been carried on, in the field of psychological research up to the present time. The purpose and spirit of the book are strictly scientific, and are intended to embody the trustworthy results of safe thought in the realm of current psychology. It is the most readable and entertaining work of the kind that has appeared, and one that may be perused with interest and profit not only by students, to whom it is especially addressed, but by all intelligent persons.

Acting and Actors;

ELOCUTION AND ELOCUTIONISTS. *A Book about Theater Folk and Theater Art.* By ALFRED AYRES, author of "The Orthoepist," "The Verbalist," etc. With Preface by Harrison Grey Fiske; Introduction by Edgar S. Werner; Prologue by James A. Waldron. 16mo. Cloth, $1.25.

"A book which has exceeding interest. The author talks in a very agreeable and instructive way about the art of acting, and while his book has a peculiar charm for those who sit in the orchestra chairs, it has a special value for the ladies and gentlemen on the stage."—*New York Herald.*

The Care and Feeding of Children.

A Catechism for the Use of Mothers and Children's Nurses. By L. EMMETT HOLT, M.D., Professor of Diseases of Children in the New York Polyclinic, Attending Physician to the Babies' Hospital, etc. 12mo. Cloth, 50 cents.

Originally prepared for use in the Training School for Nursery Maids connected with the Babies' Hospital, New York, this manual has been elaborated in ways suggested by experience, and is now published by request of numerous persons interested. It will be found exceedingly useful, not only in similar institutions but to mothers either for themselves or to be put in the hands of the ordinary (untrained) child's nurse. The author's standing as a successful specialist of wide experience in children's diseases guarantees the character of the hints and instructions given.

A Daughter of Music.

By G. COLMORE, author of "A Conspiracy of Silence," "Concerning Oliver Knox," etc. No. 145, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"'A Daughter of Music' is a novel of exceptional ability and force. It is this undoubtedly; but it is more than this: it is a book characterized by something which is very like genius, . . . a novel which ought not to be ignored by any lover of work which is as beautiful as it is powerful."—*London Academy.*

"'A Daughter of Music' is a fine romance. . . . Something of Hawthorne, something, too, of Emily Brontë, enters into the author's primary conceptions of life."—*London Saturday Review.*

"In every respect a remarkable and memorable book."—*London Telegraph.*

MRS. W. F. STEARNS'S HOME School for Young Ladies reopens Sept. 20, 1894.

MASSACHUSETTS, Auburndale (10 miles from Boston).

LASELL SEMINARY FOR YOUNG WOMEN
Suggests to parents seeking a good school, consideration of the following points in its methods:
1st. Its special care of the health of growing girls.
Resident Nurse, supervising work, diet, and exercise; *abundant food* in *good variety* and *well cooked;* early and long sleep; a fine gymnasium, furnished by Dr. Sargent of Harvard; bowling-alley and swimming-bath; no regular or foreknown examinations, etc.
2d. Its broadly planned course of study.
Boston proximity both necessitates and helps to furnish the best of teachers, including many specialists; with one hundred and twenty pupils, a faculty of thirty. Four years' course; *in some things equal to college work; in others planned rather for home and womanly life.* Two studies required, and two to be chosen from a list of eight or ten electives. One preparatory year. Special students admitted if eighteen years old or over, or graduates of High Schools.
3d. Its homelike air and character.
Training in self-government; limited number (many declined every fall for lack of room); personal oversight in habits, manners, care of person, room, etc.; comforts not s inted.
4th. Its handiwork and other unusual departments.
Pioneer school in scientific teaching of Cooking, Millinery, Dress-cutting, Business Law for Women, Home Sanitation, Swimming.
Regular expense for school year, $500.
For illustrated catalogue address (mentioning the *Nation*),
C. C. BRAGDON, Principal.

Macmillan & Company's

New Scientific and Educational Publications.

NOW READY. VOL. I. 8VO.

A Laboratory Manual of Physics and Applied Electricity.

Arranged and Edited by EDWARD L. NICHOLS, Professor of Physics in Cornell University. In two volumes, 8vo.

Now Ready: VOL. I. *Junior Course in General Physics.* By ERNEST MERRITT and FREDERICK J. ROGERS. Price, $3.00 *net.*
Vol. II., *In the Press.*

ATKINSON.

The Study of the Biology of Ferns

By the Collodion Method. For Advanced and Collegiate Students. By GEORGE F. ATKINSON, Ph.B., Associate Professor of Cryptogamic Botany in Cornell University. With Illustrations. 8vo, $2 00 *net.*

CAJORI.

A History of Mathematics.

By FLORIAN CAJORI, formerly Professor of Applied Mathematics in the Tulane University of Louisiana, now Professor of Physics in Colorado College. 8vo, $3.50 *net.*

DANIELL.

A Text-Book of the Principles of Physics.

By ALFRED DANIELL, F.R.S.E., late Lecturer on Physics in the School of Medicine Edinburgh. Illustrated. 8vo, $3.50 *net.*
New Edition in preparation, revised and enlarged.

DUPUIS.

The Principles of Elementary Algebra.

By NATHAN F. DUPUIS, M.A., F.R.S.C., Professor of Pure Mathematics in the University of Queen's College, Kingston, Canada. 12mo, $1.10 *net.*

By the Same Author.

Elements of Synthetic Solid Geometry.

12mo, $1.60 *net.*

Introductory to the Above.

Elementary Synthetic Geometry

Of the Point, Line, and Circle in the Plane. 12mo, $1.10 *net.*

HARKNESS and MORLEY.

A Treatise on the Theory of Functions.

By JAMES HARKNESS, M.A., Associate Professor in Bryn Mawr College, Pa., late Scholar of Trinity College, Cambridge, and FRANK MORLEY, M.A., Professor of Pure Mathematics in Haverford College, Pa., late Scholar of King's College, Cambridge. 8vo, $5.00 *net.*

By the Same Authors.

An Elementary Treatise on the Theory of Functions.

In Preparation.

HOSKINS.

The Elements of Graphic Statics.

A Text-Book for Students of Engineering. By L. M. HOSKINS, C.E., M.S., Professor of Applied Mechanics Leland Stanford Junior University. 8vo, $2.25 *net.*

JACKSON.

A Text-Book on Electro-Magnetism and the Construction of Dynamos.

By DUGALD C. JACKSON, B S., C.E., Professor of Electrical Engineering in the University of Wisconsin, Member of the American Society of Mechanical Engineers, American Institute of Electrical Engineers, etc. Vol. I., 12mo, $2.25 *net.*

KLEIN.

THE EVANSTON COLLOQUIUM.

Lectures on Mathematics,

Delivered from August 28 to September 9, 1893, before Members of the Congress of Mathematics held in connection with the World's Fair in Chicago, at Northwestern University, Evanston, Ill. By FELIX KLEIN. Reported by Alexander Ziwet. 8vo, $1.50 *net.*

PRESTON.

The Theory of Heat.

By THOMAS PRESTON, M.A (Dub.), Fellow of the Royal University of Ireland, Professor of Natural Philosophy, University College, Dublin. 8vo, $5.50 *net.*

By the Same Author.

The Theory of Light.

By THOMAS PRESTON, M.A. 8vo. New Edition. *In the Press.*

RICHARDSON.

Laboratory Manual and Principles of Chemistry for Beginners.

By GEORGE MANN RICHARDSON, Associate Professor of Organic Chemistry, Leland Stanford Junior University. *In the Press.*

SMITH.

Elementary Algebra for the Use of Preparatory Schools.

By CHARLES SMITH, M.A., author of "A Treatise on Algebra," "An Elementary Treatise on Conic Sections," etc. Revised and Adapted to American Schools by IRVING STRINGHAM, Ph.D., Professor of Mathematics and Dean of the College Faculties in the University of California 16mo, $1.10 *net.*

SMITH.

Arithmetic for Schools.

By CHARLES SMITH, M.A Revised and Adapted to American Schools by C. L. HARRINGTON, Instructor in Dr Sachs's School, New York. *In Preparation.*

TARR.

Economic Geology of the United States.

With Briefer Mention of Foreign Mineral Products. By RALPH S. TARR, B.S., F.G.S.A., Assistant Professor of Geology at Cornell University. 8vo, $4.00 *net.*

TAYLOR.

Resistance of Ships and Screw Propulsion.

By D. W. TAYLOR, Naval Constructor United States Navy. 8vo, $3.75 *net.*

WEISBACH and HERRMANN.

The Mechanics of Hoisting Machinery.

Including Accumulators, Excavators, and Pile-Drivers. A Text-Book for Technical Schools, and a Guide for Practical Engineers. By Dr. JULIUS WEISBACH and Prof. GUSTAV HERRMANN. Authorized translation from the Second German Edition, by KARL P. DAHLSTROM, M.E., Instructor in Mechanical Engineering in the Lehigh University. With 177 Illustrations. 8vo, $3.75 *net.*

WELD.

A Short Course in the Theory of Determinants.

By LAENAS GIFFORD WELD, Professor of Mathematics in the State University of Iowa. 12mo, $1.90 *net.*

ZIWET.

An Elementary Treatise on Theoretical Mechanics.

By ALEXANDER ZIWET, Assistant Professor of Mathematics in the University of Michigan. In Three Parts Part I. Kinematics, $2.25 *net.* Part II., Statics, $2.25 *net* Part III., *In Preparation.*

THE PHYSICAL REVIEW.

A Journal of Experimental and Theoretical Physics. Conducted by EDWARD L. NICHOLS and ERNEST MERRITT. (Published for Cornell University.) No. 7, July—August. Price, 50 cents. Yearly subscription, $4.00.

MACMILLAN & CO., 66 Fifth Avenue, New York.

G.P.Putnam'sSons

NEW YORK AND LONDON.

HAVE RECENTLY PUBLISHED:

Prose Fancies.

By RICHARD LE GALLIENNE, author of "The Religion of a Literary Man," etc., etc. 12mo, with Portrait of Mr. Le Gallienne, cloth, $1.00.

"Common Sense" Applied to Woman Suffrage.

By MARY PUTNAM JACOBI, M.D. (Questions of the Day Series, No. 80.) 8vo, cloth, $1.00.

The Natural Law of Money.

By WILLIAM BROUGH. 12mo, cloth, $1.00.

Negative.

"This is a curious book. The author has some good ideas which he has learned from other men, but he has also some very queer ideas, which, apparently, he has not learned from anybody. His hobby is the abolition of all laws providing a legal tender. . . . He would have the government coin both gold and silver, leaving each metal to circulate at its market value. . . . The proposition is not worth criticising, but it is of some interest as showing to what aberrations the human intellect is liable."—*The Critic.*

Positive.

"I have read the book with admiration and instruction. The author has made some points clear to which the logic of the case had long since brought me, but which I could not get into good form."—Edward Atkinson, LL.D.

"It will be welcomed as a text-book, successful where Jevons fails. The author illustrates the evolution of money and credit by reference to the monetary history of this country; the salient features of which he points out. . . . The prevailing idea of the author is his opposition to any legal-tender law. He pleads for free as opposed to mandatory money. In applying this to our own condition, he presents in strong colors the arguments for a bank-note currency as against a government paper currency. . . . The broad standpoint the author occupies in discussing the currency problems, and the emphasis he places on credit and its extension—that is, on the close connection between the money and the banking problem, gives the book a peculiar value. Everything is centred about the distinction between an artificial and a natural monetary system."—J. C. S., in the *Yale Review.*

"I consider Mr. Brough's book one of the most valuable ever published on the subject, and know of no book of the same size, in any language, which contains so much valuable information on money. I cannot recall before to have seen so much common sense presented in the same compass."—Hon. Michael D. Harter.

"The author goes about his work after the manner of a judge. He takes the testimony of history, that is, of the experience of nations, and combining this evidence with postulates derivable from the nature of the case, that is, from human nature, delivers his judgment. His method is so far from that of the advocate that one is at times at a loss to divine on which side of the question the author will finally alight. From first to last his reasoning is thoroughly dispassionate, and his literary style is fascinating for clearness, ease, and aptness of illustration. . . .

"Whatever the partisan or critic may think of the author's conclusions, he will have no other judgment of his book than that it is written with such charming cleverness and simplicity as to make the reader feel as if he were engaged in pleasant conversation with a friend."—*Cincinnati Commercial Gazette.*

Maximilian and Carlotta.

A Story of Imperialism. By JOHN M. TAYLOR. Illustrated. 12mo, $1.50.

"Mr. Taylor has told this story as stories are told by those who know them after long and careful study, and as such writers alone can tell them. It comes clear and picturesque from his hands, and he writes as one who produces out of a full mind. We have here the results of years of investigation, written down in 209 pages, but representing accumulations of material that might have been made to fill, perhaps, four such volumes."—*New York Times.*

*** *Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

JUST READY.

With Map and full Bibliography of the subject. 8vo, 574 pages, $5.00.

The History of Trade Unionism.

By SIDNEY and BEATRICE WEBB.

*** *This work, the result of three years' special investigation, describes the growth and development of the Trade Union Movement in the United Kingdom from 1700 down to the present day. Founded almost entirely upon material hitherto unpublished, it is not a mere chronicle of Trade Union organization or record of strikes, but gives, in effect, the political history of the English working-class during the last 150 years.*

SPEAKER.—"The book is a masterpiece of lucidity and knowledge. Every page is of value, and nearly every sentence contains a fact."

REVIEW OF REVIEWS.—"A book of first-class importance. The authors are admirably qualified for their task, and their book will become a classic in the library of labor."

THE TIMES.—"Mr. and Mrs. Webb's book is, from their standpoint, a masterly piece of work; and even those who utterly dissent from their underlying assumptions cannot afford to disregard the facts and figures they have accumulated."

DAILY TELEGRAPH.—"From many points of view it deserves to be attentively considered, not only because of the conspicuous ability with which it has been written, but owing to the vast amount of labor it has involved, and the extraordinary accumulation of facts which, in the course of some 500 pages, it has epitomized. The whole subject is laid out by the authors in a masterly and comprehensive manner."

DAILY NEWS.—"This learned, laborious, and valuable book. . . . Every single movement in the transition from the old unionism to the new—with notices of the most important persons who took part in them, of the interaction between unionism and imperial legislation—is traced clearly and ably. Then follow tables showing the distribution of Unionism throughout the kingdom, a long and most interesting description of the working and general life of a trade union, appendices, and a copious bibliography. No student of the Trade Union movement can afford to neglect this carefully-prepared history."

WESTMINSTER GAZETTE.—"This volume is a most valuable contribution to political and industrial history. It will, we are convinced, take its place at once as a standard work. It is a storehouse to which, for many years to come, students will resort for references, politicians for powder and shot, and wise men for examples, warnings, and encouragement."

STAR.—"No link in the chain has been missed, not a scrap of evidence which would throw light on the development of the movement has been left unnoticed, and the result is that for the first time we have a work, ably and lucidly written, and as complete as it is possible to make it, giving the history and the rise of trade unionism in England."

ST. JAMES'S GAZETTE.—"We incline to think this book one of the most notable published for a long time. Trade unionism is unquestionably a very important phenomenon of our times, a phenomenon which statesmen, sociologists, and philanthropists should by all means seek to understand, and this volume cannot fail to take rank as the text-book on the subject."

DAILY CHRONICLE.—"A masterpiece. . . . A great history of the English people, a history whose passionate reality underlying its wealth of careful detail makes the ordinary annals of Cabinets and debates seem thin and poor indeed. . . . No mere sketch in outline can convey the impression of masterly and devoted work which the book itself leaves upon the reader. Statesmen, trade-union secretaries, writers, or preachers, who see, as in a glass darkly, that struggle for social equality which will make or unmake our epoch, may all walk more confidently and more wisely for this piece of faithful and clear-sighted work."

NEW FICTION

IN ATTRACTIVE UNIFORM BINDING.

A Pound of Cure.

A Story of Monte Carlo. By W. H. BISHOP. 12mo, $1.00.

A striking novel of life at Monte Carlo. It embodies a curious picture of the growth of the gambling spirit upon a young married man, whose only fault is his weakness in the presence of alluring pleasure. In addition to the very remarkable plot, the book is noteworthy for the delicate and picturesque descriptions of the scenery around Monte Carlo.

"A capital study of a man possessed by the fever of gambling."—*Boston Traveller.*

"A powerful story."—*Pittsburgh Bulletin.*

Tales of the Maine Coast.

By NOAH BROOKS. 12mo, $1.00.

The setting of these short stories is mainly in and around the ancient town of Castine, Maine, the birthplace and present home of the author. In addition to their romantic interest, they possess value as true sketches of the people of the Maine coast, revealing interesting types of character, and full of local color.

Already Published in the Series.

Salem Kittredge,

And Other Stories. By BLISS PERRY, author of "The Broughton House." 12mo, $1.00.

"'Salem Kittredge' is one of the best short stories we have read recently. There are eight other stories in the volume, all good."—*Boston Advertiser.*

CASS REALTY CORPORATION.

Incorporated under the laws of the State of New York.

Capital invested only in productive real estate in the city of New York.

This Corporation is organized for the purpose of providing a safe and profitable method of investing money for persons of limited means, and it is believed that no safer or better way can be found than in the purchase and holding of well located and productive real estate in the city of New York.

The Capital Stock is divided into Common and Preferred shares of the par value of one hundred dollars each.

The Preferred shares are entitled to dividends at the rate of five per centum per annum, payable quarterly, and to a preference for principal.

The investor has the advantage of knowing that the property of the Corporation is always in sight and can be readily located and inspected, that its value is permanent and easily ascertained, that the income is certain.

For people who seek safety and permanence, together with a moderate return, this investment recommends itself.

Common and Preferred shares are now offered at the par value of ONE HUNDRED DOLLARS each, in large or small amounts. Payments may be made in installments.

Application must be made to

The Chas. E. Hires Co., Philadelphia.

Life of St. Francis of Assisi.

By PAUL SABATIER.

Translated from the French by Louise Seymour Houghton. 8vo. $2.50.

FROM N. Y. TIMES.

"The most popular and one of the most charming books in France at the present time. Every critic of any authority in Paris has written in praise of it. The book will attract interest in this country not only for its subject and the quality of its style, but for the evidence that it faithfully reflects the mind and ethical aspirations of the French people at this moment."

FROM ALPHONSE DAUDET.

"For long, very long, nothing has moved me so deeply as this lofty and simple story."

FROM THE S. S. TIMES.

"His book has made a great sensation in France by its originality as a work of research, its hearty enthusiasm for a great character, and its spiritual suggestiveness. M. Sabatier has retold a fascinating story with rare literary skill and with the justest critical discrimination."

FROM THE BOSTON ADVERTISER.

"It is no exaggeration to say that in the work of Paul Sabatier we have, for the first time, what may be fitly called St. Francis's biography. It is a valuable contribution to the literature of biography and history."

N. Y. EXAMINER.

"M. Sabatier has sought to present Francis as he actually was, emphasizing the human side of his character. He has succeeded admirably; better, we think, than any of his predecessors."

THE LONDON SAT. REVIEW.

"We have seldom seen so masterly and careful a criticism. It is a remarkable and excellent book; nor, great as is the progress which the French historical school has recently made, have we seen a better example of it."

The Theory of Sociology.

BY

FRANKLIN H. GIDDINGS, M.A.,

Professor of Sociology in the Faculty of Political Science of Columbia College.

This is a work for which students of Sociology have been looking for several years. It is a compact preliminary statement of the theoretical organization of Sociology, on which, as has been well known, Professor Giddings has long been engaged.

The contents are as follows:

Chapter I.—The Sociological Idea.
Chapter II.—The Province of Sociology.
Chapter III.—The Problems of Sociology.
Chapter IV.—The Primary Problems; Social Growth and Structure.
Chapter V.—The Secondary Problems; Social Process, Law and Cause.
Chapter VI.—The Methods of Sociology.

This work marks a new stage in the development of Sociology. For what has been vague and formless it substitutes precision and order.

Sent, postpaid, on receipt of price, 50 cents.

A list of Publications, among which are a number of other works on Sociology, will be sent on application.
